More stereotyping. From all the people I've seen in this hobby, the only thing I can say for sure that they all have in common is that they're all different.

And with hundreds of thousands still active in the U.S. alone, is it really a dying hobby or is that just the propaganda machine at work, by the guys who want to make a few bucks selling off our spectrum?

I have the following for sale. I'm looking for a one price buys all best offer. Please no request for single items for now. Thank you for your time.
Benny L Dowers

One - ARL (Applied Research Laboratories, Inc.) capacitor, 15 MFD - 600 VDC, AEROVOX PO9J, part # 02104

One - Spargue electrolytic capacitor, 80MFD.350 VDC, 40MFD.350 VDC, twist-lock Lytic, TLV-2634

Two - Sprague electrolytic capacitor, 20-450 D.C. +3, 20-450 D.C. +5, Com. neg. +1, Octal-Base Lytic, PE-2755

Two - Sprague electrolytic capacitor, 20 UF - 450 VDC, Atom Lytic, TVA - 1709

One - Sprague electrolytic capacitor, 8 MF - 150 WVDC. Atom Lytic, TVA - 1405

One - Mallory electrolytic capacitor, 20 MFD - 450 VDC, 15 MFD - 350 VDC, 15 MFD - 350 VDC, type FP, Fp343.4

One - G.E. Company pyrand capacitor, 56 uf - 250 VDC DC, 100 amps, 21f483

Two - Tracor Westronics CA-614-2075 Capacitor, Spargue + - 10% 200DC

One - Southern Electronics Mylar capacitor, 1 MFD 0 + - 10% 50VDC, 03357-1

One - Southern Electronics Poly capacitor, .1UFD+ - 10% 100VDC, 02831-0.1

One - Sprague electrolytic capacitor, .5 MF+ - 10%, 600 VDC, 6TM-P5

One - Sprague electrolytic capacitor, 500uf- 50VDC, Atom Lytic, TVA-1315

One - Sprague electolytic capacitor, 20 MF, 450 VDC, Atom Lytic, TVA - 1709

One - Sprague electolytic capacitor, 500MF - 50VDC, Atom Lytic, TVA -1315

One - Sprague electolytic capacitor, 20 UF - 450 VDC, Atom Lytic, TVA - 1709

One - Sprague electolytic capacitor, .1+- 10% - 600 DC, 220P, 6PS-P10

One - Nippon Chemi-Con, 16V - 220 uF, CEO2W, 67(1)

One - Nichicon, 4700uF - 35V

One - Nippon Chemi-Con, 50uF - 200V , 10681BE

One - Cinema CE529E, 235+-1/10%6448

Four - Cornell Dubilier, CDE, Beaver electrolytic capacitor, 4 MFD - 600 WVDC, type BR4-600

One - Cornell Dubilier, CDE, Beaver electrolytic capacitor, 20 MFD - 250 WVDC, type 20-250

have a
>bearing on our demographics because fat people generally die
younger
>than those who take care of themselves.) Your retired couple
doesn't
>contradict that, or the fact that most of these older people aren't
being
>led into a technical career by amateur radio (one of our prime
purposes).

The guy in that couple is a retired IBM-er and has been an electronics engineer all his life. I never asked him if amateur radio started him on the way.

>It *is* gratifying that this couple is trying to interest some *kids* in amateur
>radio.

Not just interesting them, they're cranking out kids with tickets. As young as age 8, from what I recall.

> The *kids* may wind up in high tech careers as a result.

Hopefully, because the guy is an engineer and loves to build things, so I'm imagining he's introducing the kids to building things too.

> But too few
>old hams are doing what they are doing, and too few kids are becoming
>hams.

Well, lets encourage that then. As part of public service, why not have ham clubs start up groups that go to schools and do talks on it and have classes just for getting kids tickets and getting them into building things too, so they can start off young with technical hobbies. I had to do that myself. I got curious about electronics at age 13 and built a few simple things with help from a school library book, then started raiding junk piles behind TV stores for parts. I got my first ham license right after high school.

>But most hams aren't kids today, in fact the average age is (as of the last
>FCC published DOB info) 59, and for HF licensed amateurs it is 63.

Partly because of code. (I know I'm going to tweak some beaks with that :)

> When
>I was first licensed, as a kid, 34 years ago, the average age of all amateurs
>was 27. The percentage of hams who are kids today is the lowest it has been
>since amateur radio started. That is not healthy.

And who has the power to change it? The clubs. THey need to expand their public service to bringing the kids into the hobby.

> It isn't just that those of us
>licensed back then have gotten older, it is that not enough young people have
>gotten licensed in recent years to keep the average age stable. If amateur
>radio were healthy, its demographics would track the population at large. But
>it hasn't. Amateur radio has greyed much faster than the population

average.
>And that's because it has been unable to bring in enough young
people.

There's also the fact that the schools may be partly responsible.
THey've gotten to the point now where a HS degree means nothing
anymore because all someone has to do is occupy a seat to get one.
The 25% functional illiteracy rate in this country (where 25% of
the adult population can't even fill out a job app correctly) is a
national disgrace and needs to be changed as a national priority.
That isn't helping the hobby either. If people can't read, they
can't learn electronics or radio.

>>>> Nor are old fat white men likely to come up with

amateurs
>will be dead. And the upgrade rate is not nearly enough to replace
them.
>Our current crop of Techs are a bit better off. Their average age
is 43.

That clearly shows the need to replace code as a requirement, with something like more technical questions, which will still keep out the riff raff (hopefully, though there are constant examples that even code has failed at that) while letting people get into the hobby without having to be engineers. I think the testing and entry process just needs refining. Plus doing some counter propaganda of our own, against that of the folks who just see amateur radio as potential interference to their poorly designed TV sets.

>Most of them will still be around in 20 years. But our HF
population is
>set for a dramatic collapse. This will have a dramatic effect on
the
>character of amateur radio, which since its outset has been
dominated
>by the aspirations of HF operators.

So why aren't groups like the ARRL and others addressing these problems and solving them? (we might ask)

>And I might add that it has traditionally been the allure of HF
which has
>attracted young people to amateur radio in the first place.

It's what attracted me. The idea of being able to talk to people around the world and learn about them. I love rag chew. The contests (for what? Pieces of status paper?) and quick sound-bite-for-QSL-card QSO's are what turned me off to it.

> They might
>wind up spending most of their time at VHF+ after being licensed a
>while, but it is the allure of faraway places and distant voices
which
>initially has fired their imaginations and drawn them to amateur
radio.

I agree.

>That allure is dimmed somewhat in today's global village, but it is
the
>roadblocks that amateurs have erected to access to HF which has
>had the greatest dampening effect for newcomers to amateur radio.

Like code?

>Access to HF is now the end of a long journey rather than a first
>step. Most youngsters have short attention spans, and without an
>immediate feedback, the allure quickly fades from dim to gone.

True. I got in as a novice and did cw until I got my general, but it
would have been easier if the code hadn't been required.

>We've mostly done this to ourselves. 1968 was the watershed
>year for our demographics. We signed the ultimate doom of
>traditional amateur radio that year when we let the ARRL's
>ill conceived Incentive Licensing plan become reality. We've
>been on a downhill slide since then. Oh there are still plenty
>of us alive and kicking, *now*, and *older* people are getting
>licensed to use amateur radio as a cheap cellphone substitute,
>but the time bomb is waiting. No doubt it will catch those in deep
>denial by surprise when it explodes in our faces, but explode it
>will if we don't very quickly reverse course.

Food for thought.

Interesting post.

2664. CEPT Harmonization - HF Modernization

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-25 00:00:00 UTC
From: K0HB@USA.NET
Message-ID: <6d1u54$p8q$1@nnrp1.dejanews.com>
Source record: 177144
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

The soon-to-be-adopted-in-US CEPT agreement will potentially allow foreign amateurs to have privileges in the US which may be greater than US amateurs who have passed examinations similar in difficulty.

US licensees who have passed a Morse test at 5WPM, unless they can obtain a medical credit, are consigned to a few narrow HF frequency sub-bands and never get a taste of "mainstream" amateur operation. We have long sequestered the Novices and Tech+ folks away on tiny little frequency ghettos where they meet no-one except more Novices and Tech+ licensees. Then we are surprised that few of them become "mainstream" operators!

Further, from the viewpoint of the current (VHF/UHF) Technician licensee, there is essentially no incentive to take the next step to Tech-Plus, since the upgrade gets them promoted, not into "mainstream HF", but into the same ghetto-like slices held by Novice operators. It takes a 2-step upgrade to General to get any meaningful increase in priveleges. Then we are surprised that few Technicians bother to upgrade!

In order to harmonize our license structure closer to most CEPT countries, and simultaneously provide our "coded" licensees with a better exposure to "mainstream" HF operation, what do you think of the following changes?

Thoughtful answers only, please. Flames will be cheerfully routed to the bit bucket.

(Credit-where-credit-is-due-Department: These ideas are modeled largely after the work of Director Tod Olson, K0TO, of the ARRL Dakota Division, and his WRC committee.)

1. Change Morse code speed for General Class to 5WPM.

2. Immediately upgrade all "old" (pre-1981) Tech-Plus to General. (These folks took the same written test elements as General.)

3. No new Novice licenses. Existing licenses would lapse or upgrade at end of current license term. The Novice license is no longer a popular "entry point" info amateur radio, and upgrading to Tech-Plus would entail only a short written test.

4. (a) Anyone holding a Technician license issued before the effective date of new rules would be able to upgrade to Technician Plus on passing a 5-wpm code test.

(b) Anyone issued a Technician license after the effective date of
new rules, since they will have passed a written examination dealing
only with VHF, would have to pass a new written exam oriented toward
HF as well as a 5-wpm code test to upgrade to Tech-Plus.

5. Remove the current CW allocations for Novice/Tech-Plus, and substitute
the following CW/Data allocations (200W max power output) in "mainstream"
portions of the bands:

80 meters 3550-3700
40 meters 7025-7050
30 meters 10100-10150
20 meters 14050-14100
15 meters 21050-21100
10 meters 28050-28300

6. Change the existing HF phone bands as follows:

Tech Plus (200W) 3925-4000
General 3800-4000
Advanced 3725-4000
Extra 3700-4000

Tech Plus (200W) 7250-7300
General 7200-7300
Advanced 7125-7300
Extra 7125-7300

Tech Plus (200W) 14275-14350
General 14200-14350
Advanced 14175-14350
Extra 14150-14350

Tech Plus (200W) 21350-21450
General 21250-21450
Advanced 21175-21450
Extra 21150-21450

Tech Plus/Novice (200W) 28300-29700
General/Adv/Extra 28300-29700

I
>am. just last week in powhattan ks a 28 yr old woman was found shot to
>death on her farm. powhattan is a little town where in the past you
>could leave your doors unlocked.

Sorry to hear that. Yeah, I know...the world is getting nasty all
over. But
in comparison to other parts of the country, we have it pretty good out
here.
I just moved up from Orlando; now THERE'S a crime mecca if I ever saw
one!

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

Let's review...the poster actually calls Dimbuld by his name and he responds. Dimbulb is now in Kansas having moved up from Orlando, same as Drew...

What a loser you are Durigan. I did notice that your puncuation is a tad poor. I'm surprised an anal retentaive racist such as yourself failed to catch that.

Actually I am impressed that you could carry the farce for so long. Too bad your Rigley Spearmint gum facade failed. What next, CB Crossburner??? How about CB Skinhead.

Oh yes, the station confirmed that the pictue of the fat man was you. Was curious and called them. Suggested they check into a Richard Simmions/Slimfast clinic

You pal and friend for always

Please no request for single items. Thank you for your time.
Benny L Dowers

Ohmite Vitreous Enameled Resistors

(the following are about 1.25 inches in diameter by 12 inches long. they are made of a ceramic type material. some have a movable metal ring . adjustable ohms ???. If any body knows, e-mail me.)

Two - fixed resistor, stock # 0901, 225 watts , 25 ohms

One - DIVIDOHM resistor, stock # 1360B , 225 watts , 250 ohms

Seven - DIVIDOHM resistor , stock # 1357 , 225 watts , 10 ohms

Two - DIVIDOHM resistor , stock # 1360B , 225 watts , 250 ohms

(the following are square tube shaped at .5 by 6 inches long. made of a resin or ceramic type material . no markings of brand name or watts-ohms)

Four - Marked S over a T. 126-175H -Q , 6J (no other markings)

(the following are smaller 2 inches long ceramic)

Two - OHMITE - DIVIDOHM resistor , stock # 0368 , 25 watts , 100 ohms

One - Memcor , FRL20 - 100 K ohms

One - Memcor , ARE25 - 3 K ohms

One - Tru - OHM , AR25 - 100 K ohms

2669. FS: Stancor Transformer

Newsgroup: rec.radio.amateur.misc

Dan,

I think you have an over-sensational idea of what the this group is. The committee has *no* control over enforcement (that is an FCC function) and has *not* asked for any control. As you can see by the minutes of the meeting, they simply are a study group appointed by the president of a rather large amateur radio club and have no "government control" function whatsoever.

The meeting minutes pertaining to this study group are quoted below my signature.

73, de Hans, K0HB/4ID

~~~
The truth is out there on 1420.4056 Mhz. Listen up.
~~~

"65. On motion of Mr. Heyn, seconded by Mr. Falcone, it was VOTED that the Board of Directors hereby establishes the Enforcement Task Force. The Enforcement Task Force shall explore any and all means and methods to obtain increased enforcement of the Amateur Rules by the Federal Communications Commission and to make such recommendations to the Board of Directors as is appropriate. The President shall appoint the members of the Enforcement Task Force. The Enforcement Task Force shall consist of Directors, Officers, staff and such other persons as are necessary and appropriate to further the work of the Task Force. The Enforcement Task Force shall also have oversight supervision over the operation of the Amateur Auxiliary for the purpose of reviewing the operation and work of the Amateur Auxiliary and recommending any appropriate changes to the Board of Directors.

At this point, the Chair announced appointments to the Enforcement Task Force as follows: Vice President Harrison, Chairman; Directors Craigie, Falcone, Fallon, Heyn, and Quiat; Vice President Turnbull; General Counsel Imlay; and Field Services Manager Palm."

This isn't North America. We don't _have_ to do everything
you Yanks do.

We don't have the capacity to support all the great unwashed
being on-line 24+ hours a day. I'd rather pay for local calls
(which are dirt cheap anyway) than suffer the problems caused
by under capacity at the telephone- and ISP-levels.

Translation, I have 4 weeks vacation to burn up on the use it or lose it
program plus it only takes a few minutes to look up things. You type in
a name, find a post and then hit author profile and it's all broken down
by newsgroup. Takes no more than a few minutes for each one of your
warped little persona. No 1000's, just a few. You give yourself way to
much credit although you are a prolific poster, I must say.

BTW, Mr. Anal Retentive..the word "about" is spelled wrong.

I though this was a better post to profile your racist views. Of course,
I could have used the ones about the riots in Florida, the machine
gunning of Haitian boat refugees or my personal fav, the deporting of all
Latinos and the their spouses, even if American, as punishment for their
crimes against the white race. Funny how you even mentioned Carl in that
post as well. But then again, you weren't you right??

However you are right, you only go to Wichita to go shopping, you live in
the sticks, right???

Nope, you are not that bright. And again, the info was had in less than
15 minutes. Of course, you could plant messages looking for dual tape
decks to support your bootlegging activities. But then again, maybe not.

> Perhaps I also have a beef with Drew, having read his biting comments
> time and time again when he frequented this newsgroup as "Drew From Sunny
> Central Florida."

Funny how Drew from Sunny Florida, turned into Drew from Windy Western
Kansas. Funny how Drew from Florida from a 3rd rate radio market to a
4th rate radio market. Funny how the last name in each case was Durigan.
Funny how your last name is Durigan And you call me the loser?? Gotta
hand it for you, all the smoke from burning crosses sure did damage what
few brain cells you might have yet.

> The truth is that you'll never know for sure, will you? You
> will never be able to prove your assumptions beyond the shadow of a doubt...and
> that's what bothers you the most.

Actually Drew, the best is yet to come. All you have to do is know
someone at AOL (like I do) and they can put your user account with your
user names Oh my gosh....looks like you're about to be outed for sure.

Look for that info coming to a newsgroup near you.

Well all for now sports fans and athletic supporters. Stay tuned for As
the Drew turns slowly in the wind or how can Drew be in two places at
once, when he's really no one at all.

Hi.

My problem with IC-706:
- 2m TX not working properly (power output)
- 2m RX is too low
- All other amateur bands are working properly

The antenna is working properly. I tried with two antennas. I could use it for HTX-242 so the antenna shouldn't be a problem. Now, it must be somewhere inside, but I can't figure it out. (the cables are connected properly...)

Thanks for your help.

Where did all of the "mainstream" operators we have now come
from Hans, out from under a latte stone ? Some people just want
to get out of the ghetto worse than others do ?

>5. Remove the current CW allocations for Novice/Tech-Plus, and substitute
> the following CW/Data allocations (200W max power output) in "mainstream"
> portions of the bands:

Power limitations are a wonderful idea. Look how well the 5 watt limitation
on 27 mhz has worked. Look how well the 1500 watt limitation on the HF
bands is working now. Plus you'll create a whole new market for Ameriton,
100 watt in 200 watt out power boosters. What a great idea !

Nope. Not unless you live with Jeffy in Hawaii. Fortunately, within days of Hawaii caving in to perverts and legalizing same sex "marriages", nearly all other state legislatures passed laws which would specifically prohibit the recognition of such abnormal "unions" in their states.

FS/FT: Cushcraft R5 Vertical

I have a like new Cushcraft R5 vertical antenna for sale. Excellent limited space no radials antenna.

This antenna was used for just over a year, and been in storage for the last five years. Extremely clean, almost like brand new. Complete with all hardware and documentation, in the original box and packing materials.

Work 10, 12, 15, 17, and 20 meter with this highly efficient vertical radiator only 17 feet tall.

I want $200 + shipping.

>>> career by amateur radio.
>
>Stereotyping. I know an elderly retired couple of hams near here who
>are running their own training school for kids who want to get
>tickets.

No, it isn't stereotyping, it is the truth. Most hams *are* old white men,
the licensing statistics prove it. And a large percentage are fat, a visit
to any hamfest or ham club meeting will confirm that. (Note I don't have
a problem with fat people, it's just an observation, but it does have a
bearing on our demographics because fat people generally die younger
than those who take care of themselves.) Your retired couple doesn't
contradict that, or the fact that most of these older people aren't being
led into a technical career by amateur radio (one of our prime purposes).
It *is* gratifying that this couple is trying to interest some *kids* in amateur
radio. The *kids* may wind up in high tech careers as a result. But too few
old hams are doing what they are doing, and too few kids are becoming
hams.

But most hams aren't kids today, in fact the average age is (as of the last
FCC published DOB info) 59, and for HF licensed amateurs it is 63. When
I was first licensed, as a kid, 34 years ago, the average age of all amateurs
was 27. The percentage of hams who are kids today is the lowest it has been
since amateur radio started. That is not healthy. It isn't just that those of us
licensed back then have gotten older, it is that not enough young people have
gotten licensed in recent years to keep the average age stable. If amateur
radio were healthy, its demographics would track the population at large. But
it hasn't. Amateur radio has greyed much faster than the population average.
And that's because it has been unable to bring in enough young people.

>>> Nor are old fat white men likely to come up with
>>> technological innovations, most of that is done by people under
>30 whose
>>> brains haven't yet calcified into a fixed paradigm.
>
>More stereotyping. I'm 49, have been in electronics R&D since the
>late 60's, and have been described as still being one of the most
>innovative people my co-workers knew.

Again, statistics bear out the idea that most innovation is done by
those under 30. This is confirmed by major scientific papers published
and seminal patents issued. There are exceptions, and you may be one,
but the electronics industry generally considers a design engineer who
hasn't moved out of active design and into management by the time she
is forty as deadwood. That's because experience has shown that most
of the innovative work is done by those fresh out of school, full of new
ideas and new insights.

>> And, unfortunately, a
>>large
>>> number of those old fat white men want to keep amateur radio as

>by the guys who want to make a few bucks selling off our spectrum?

What we have is a demographic time bomb ticking away. The statistics
are clear. In 20 years, nearly half of currently HF licensed US amateurs
will be dead. And the upgrade rate is not nearly enough to replace them.
Our current crop of Techs are a bit better off. Their average age is 43.
Most of them will still be around in 20 years. But our HF population is
set for a dramatic collapse. This will have a dramatic effect on the
character of amateur radio, which since its outset has been dominated
by the aspirations of HF operators.

And I might add that it has traditionally been the allure of HF which has
attracted young people to amateur radio in the first place. They might
wind up spending most of their time at VHF+ after being licensed a
while, but it is the allure of faraway places and distant voices which
initially has fired their imaginations and drawn them to amateur radio.

That allure is dimmed somewhat in today's global village, but it is the
roadblocks that amateurs have erected to access to HF which has
had the greatest dampening effect for newcomers to amateur radio.

Access to HF is now the end of a long journey rather than a first step. Most youngsters have short attention spans, and without an immediate feedback, the allure quickly fades from dim to gone.

We've mostly done this to ourselves. 1968 was the watershed year for our demographics. We signed the ultimate doom of traditional amateur radio that year when we let the ARRL's ill conceived Incentive Licensing plan become reality. We've been on a downhill slide since then. Oh there are still plenty of us alive and kicking, *now*, and *older* people are getting licensed to use amateur radio as a cheap cellphone substitute, but the time bomb is waiting. No doubt it will catch those in deep denial by surprise when it explodes in our faces, but explode it will if we don't very quickly reverse course.

How odd. Here I'm refering to Drew, and Rambo intrudes to defend him.

Let's see, didn't Drew get caught tresspassing on school grounds?
Wonder what he was doing there? Pestering the little kids? Soliciting
controlled substances? And, in the past, he's advocated breaking
federal and international communications laws. But none of this
should concern you, Rambo.

Have a productive week doing whatever you do,
Jeffy

>My opinion of those "outlaws" is the same as the "legal" operators who talk
>over SW broadcast stations on 40 meters every night. The only difference is
>a piece of paper that says "Amateur Radio License."

That would seem impossible to me; the heterodyne would be horrible
unless the stations were "zero beat" with the bcst station. Even
then, the programming (music, news, talk), coming from a 50 to 500 kW
station would cause terrible QRM to the hams' QSO.

Consider the propagation possibilities, though: The hams in QSO
might not even be aware there is a SW station on the air - you say
you're an Extra, so you know about "skip zones" and such - while your
QTH might be in a location in which you're able to hear both the
broadcaster and the hams.

Please elaborate on what you've heard; I find this interesting,
if what you say is true.

>Oh yes, that piece of paper prevents all interference with other services!

If they're causing *intentional* interference, then they are criminals.
Now, how about some comments regarding those outlaws on the aeronautical
mobile frequencies? You've been awfully silent concerning their activity.

Have a productive week (doing whatever you do),
Jeff

RIGHT while I have had the flue over the last few days and have not checked this little posting (which is growing into a monster !!!!) for a little while, I was amazed to see it has grown from my inital posting to 89 thus far!!!!!!!! Going from Internet access via Packet radio, somthing about govermnet should pay for everything, to TV, to Vehicles GAS etc etc etc HUH!!!!!! MAN!!!!!

OK well I found out what I wanted to find out, best help was from David TSE, and a link to force9 etc, i was able to find out that the technology IS available to actcheive FULL internet connection via Packet Radio. NOW wheather the HAM laws on Packet radio contents will allow internet access in England, and IF things might be changing (loads thing changing in this country NEW labour) new laws etc etc and wheather there is a line of site gateway from my location within say 60-100 miles of me, has all yet to be determined.

But my initial thoughts of wheather the technology exits has been answered YES IT IS. I Have found that it is Possible.

It may interest all who have responed to my initail posting that i
have found another way of connecting to the net which if is successful
will give me 120hours/month FULL internet access VIA ISP through a
MOBILE PHONE FOR JUST £32/month, which price also INCLUDES an ISP
monthly charge of £12...YES I KNOW BUT IT IS TRUE.

ITS not full free access but 120 hours FULL Internet access for £32
all in aint bad at all PLUS its legal.

So 89 Posting upto now....I wonder what the world record is on postings to a NewsNET posting is? Anyone know? Wanna Join this Fast growing Posting?

DO TRY AND KEEP IT TO DIFFERENT WAYS OF CONNECTING TO THE NET, USING ANY FORM OF TECH. RADIO, MICROWAVE, CABLE, TELEPHONE, SAT, ETC ETC ETC WHATEVER. IT MIGHT TURN INTO A USEFUL GUIDE YOU NEVER KNOW.

IF YOU CAN GATHER YOUR DATA AND POST ALL WILL BENEFIT, COULD BE GOOD THIS.WILL HAVE TO WAIT AND SEE.

DREAD TO THINK WHAT WILL HAPPEN AFTER THIS POSTING!!!!!!! hehehee

TO ALL

Cheers

IAN

I Have For Sale A Icom 251A 2-Meter All Mode Radio With Vox & With IC-HM7 Amplified Microphone.
This Radio Operates Perfect, Just Recently Used It In My First ARRL VHF Contest.
The Radio Is Very Clean & Comes With The Box, Manuals, & Schematics.
Only Problem Is That The S-Meter Is Stuck In The Middle & Was Like That When I Bought The Radio Last Year. This Radio Has A Very Sensative Receiver & Is Very Impressive On The Air. I Am Selling Because I Purchased A New Kenwood This Last Weekend. I Would Rate This Radio 8.5-9
The Price Is 375.00 PrePaid Plus Shipping.

Hams have behaved extremely well when faced with a loss of frequencies (11m, 220-222 MHz). If losses are in store for us at some time in the future, I believe we'd continue to behave in a proper manner.

Your pipe-dream of all M/HF amateur spectrum being taken away will, in all likelihood, never occure. For example, 160m requires a very large array, is quite noisy during the summer months, and has only ground-wave propagation during daylight hours; only amateurs have the patience to operate down there. And let's not forget, the NTIA, a government agency, has proposed the ARS be given even more HF spectrum. (See below)

Have a productive week (doing whatever you do, if you do anything at all),
Jeff

From: w1aw@arrl.org
To: QST@hawaii.edu
Subject: ARLB097 NTIA Report Bullish on Additional HF Allocations for Amateur
ARRL Bulletin 97 ARLB097
>From ARRL Headquarters
To all radio amateurs

High Frequency (3-30 MHz) Spectrum Planning Options, a planning document released December 13 by the National Telecommunications and Information Administration, says the HF spectrum is flexible enough ''to accommodate most, if not all,'' demands for additional HF spectrum, including new and bigger HF ham bands. The NTIA is an Executive Branch agency in the Department of Commerce that's responsible for developing telecommunications policy and advising the President on telecommunications matters. The NTIA's latest report is a follow-on to an NTIA study released in March 1995 (see QST, June 1995, page 75).

The Options report addresses spectrum availability and long-range planning options for services that were identified in the earlier report as needing additional HF spectrum--including Amateur Radio. The report cites a potential 900 kHz or so of expanded or upgraded allocations for Amateur Radio in the HF spectrum, including:

+ an exclusive, worldwide allocation at 3500 to 3800 kHz
+ a new band at 4945 to 4995 kHz (additional technical studies would be required)
+ an ''aligned worldwide'' allocation at 6900 to 7200 kHz
+ expanded worldwide, primary allocations at 10100 to 10350 and 14000 to 14400 kHz
+ expanded allocations at 18068 to 18318, 24740-24890, and 28000 to 30000 kHz.

Some of the potential expansions proposed for amateurs and broadcasting are mutually exclusive or could involve sharing by the two services. These include the potential expansions at 30, 20 and 17 meters. According to the report, ham radio allocations account for 13.1 percent of the HF spectrum (3 to 30 Mhz). ''There are no current plans to auction any HF spectrum,'' the NTIA report states, but notes that additional allocations for ham radio would come at the expense of other services--primarily fixed, fixed-mobile and broadcasting. ''The expansion and upgrading of amateur allocations in the 10 MHz, 14 MHz, 18 MHz, and 24 MHz (bands) appear acceptable; however, this will depend on future decrease of requirements for the aeronautical mobile (R) or the fixed services internationally,'' the report said. Changes in the 80 and 40-meter bands ''will require the inclusion of these proposals in US preparations for future WRCs,'' the report added. A requested allocation at 6900-7200 would serve ''to reduce inter-regional sharing and interference from HF broadcasting in the 7100-7300 kHz band,'' the report said. The report called the requested upgraded allocation at 3500 to 3800 kHz ''a good candidate for a common worldwide exclusive amateur allocation at the 3.5 MHz band.''

To help satisfy demand for additional HF spectrum access, the report suggests more efficient use of current allocations, moving current HF spectrum users to other portions of the HF spectrum, use of other non-spectrum technologies and use of higher frequencies. The report also said sharing--and removal of some ''exclusive'' allocations--might be another option.

Calling ham radio ''the oldest radio service'' and one that ''pre-dates regulation,'' the NTIA report casts the hobby in a favorable light. ''Radio amateurs have made significant contributions to the field of radio propagation, HF single-sideband radio, HF data communications systems, packet radio protocols and communications satellite design.'' The report goes on to say that ham radio ''continues to play an important role in disaster-relief communications, where amateurs provide radiocommunications independent of the telephone network or other radio services.''

To view the complete report, set your Web browser to http://www.ntia.doc.gov/osmhome/reports/hfspo/contents.html.

>illegal
>activities. Please state for the record exactly what unlawful acts
>Drew is
>engaged in and provide sufficient proof to back up your allegations.
>There is
>a legal term for making a false public accusation in a public forum
>such as
>this. It's called "libel." Judges and juries tend to award
>substantial
>damages to victims of "libel."

How odd. Here I'm refering to
>Drew, and Rambo intrudes to defend him.

No, Jeffy. I'm not "defending" him; I'm merely pointing out to you that it is
unwise to make accusations against him in a public forum unless you have
adequate proof to back up your claims. If he did the things you claim he did,
I have no problem with your bringing it to our attention. But let's see some
proof, shall we?

Let's see, didn't Drew get caught
>tresspassing on school grounds?

He did? "Trespassing" is most certainly a crime. Could you please provide
details and factual evidence of this? This should be easy, since police
records are a matter of public record. So tell us, Jeffy. Give us some proof
to back up your new allegation. Arrest date? Court docket number? Outcome of
the trial? Do you have any evidence to support the claim you have just made
against him, or are you simply repeating rumors and accusations that you have
heard from others?

>Wonder what he was doing there? Pestering the
>little kids? Soliciting
controlled substances?

Now we're going to continue, making additional unfounded allegations and unproven public statements, eh? Keep talking, Jeffy. You're just getting yourself in deeper and deeper. These days, attorneys LOVE to take cases like these. It's just a matter of time before one of them reads your comments, contacts Drew, and offers to bring an action on his behalf on a contingency basis.

>And, in the past, he's
>advocated breaking
federal and international communications laws.

Again, please show proof to support your original contention that he engages in illegal activities. "Advocating" is not a crime, Jeffy. It's called "freedom of information", "freedom of speech." This is quite different than actually doing something unlawful, which is what you have accused him of. Have you ever told someone how to modify a scanner for full 800Mhz coverage? If so, then you have "advocated breaking federal communications laws." Of course not, right? Not Jeffy.

Keep making unfounded and unproven accusations if you wish. Personally, I could care less. I'm just trying to save you a lot of potential problems by advising you that, especially in this day and age where people sue at the drop of a hat, it is not a very wise thing to do. Proceed at your own risk.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

2719. Understanding the grounded base amplifier

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-25 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6d182e$df4$1@w3eax.umd.edu>
Source record: 177267

It took me a long time to get used to seeing a transistor
being used without a bias circuit.

"How does it ever turn on?"

Living in a world of Class A amplifiers (close to linear)
jaded me for the world of RF amplification.

In a sudden fit of madness, I suddenly realized that the
aim was to let the incoming signal be large enough to
itself turn the transistor on. Of course, this would
occur a maximum of half the time, and usually less.

"Hmmm..."

So anyway, with no biasing circuit, your amplifier lives in
Class C operation at best. With the use of a good output
filter, this is a perfectly acceptable application for
FM and CW operation.

Hi randy -- try this -- go to URL:
http://www.hotbot.com/
Type in modesto and ham radio
choose boolean expression

Get several central calif ham web pages.

You can now find the mods for the Kenwood TH-G71A HT, On my site,
http://www.angelfire.com/ca/ke6gwf/
Note; Currently I only have the wide band Receive mods. If any of you have,
or know were I can find, the full Transmit mods, please let me know.
I will post them, as well pictures that I took with the radio apart, as soon as I get them.
Thank you, Ben (KE6GWF)

P.S. I did the receive mods on mine last night, and everything seems to be
working all right.
After mod Rx capability.
136.000MHz- 173.995MHz, 400.000MHz- 469.995Mhz
320.000MHz- 399.99375Mhz, 800.000MHz- 823.9875Mhz

Amateur radio will survive Burt and his ramblings without any problems because he comes across as a crackpot and will be treated as such by the press. The thing that bothers me is that Burt claims to be a teacher. I have to wonder how he is effecting his students with his views. I also wonder if the school administrators and parents know the type of personality that is in a position to influence young and impressionable minds?

Author: Daniel WCC, 9V1ZV
Date: 4 February 1994
Subject: Band extension mod for FRG-9600/965

Foreword

Since I bought my second hand FRG-9600, I have been fervently looking for mods for the radio. I have seen mods for so many other scanners, I could not believe there was not even one for the FRG-9600. This was quite disappointing as I liked the idea of making mods to radio. Recently I received my service manual for the radio and the result of which is this simple mod. All you FRG-9600 people out there, use your creativity. I am not sure if opening up the radio and performing the mod will void your warranty so you may want to check it out first. I can only say that this mod works perfectly for me but will not accept responsibility if you destroy your radio by your own mistakes.

Description

The original range of the FRG-9600/965 was from 60 mHz to 905 mHz. Looking at the circuit, however, revealed that YAESU had originally designed the radio to cover HF as well. Not only that, it also had coverage up to 950 mHz. I suspect that there had originally been intended a module for HF frequencies which is supposed to fit into the empty slot (J8001/J9001) next to the VHF/UHF front-end unit. For some reason, this option never materialized, maybe for commercial reasons! Anyway, it seems that some provision had been made on the Band Unit module to go ahead and make use of these bands anyway without the dedicated HF front-end. Thus, we can now enable reception from 20 mHz to 950 mHz with no gaps in between. Unfortunately, the sensitivity is not fantastic at the fringe frequencies but nevertheless signals can still be received. If you have a computer on, the RF emmission from the PC is likely to drown out most of the 30 mHz band anyways so you may want to go manual on these bands. The 905-950 band is more acceptable and works fine pulling in cellular on those channels. You will probably hear some of the RFI generated by the radio's on-borad CPU here and there also.

Modification

The mod itself involves soldering in 3 jumper wires onto the Band-Unit.
The Band-Unit is the closest module to you on the left. Carefully remove the cover of the radio by unscrewing the 4 screws holding down the top cover. In order to remove the cover, you need to push it back about 15 mm before lifting it so be sure not to apply undue force. Be sure to remove the power supply before beginning.

```
--ANT--CAT------------POWER----
| |
| [===Video===] |
| _ |
| | | [===W.FM====] | Looking at the
| |F| | opened radio from the
| |E| | top.
.
.
.
| [==PLL==] |
| [====SSB/AM Unit===] |
| |
Here -----> | [=BAND UNIT=] |
| [==Filter==] |
| |
-----Control Panel/CPU---------
```

This gives you the idea of where the Band Unit module is located. The actual module names are printed on the main PCB so take a closer peek and you will see which one is which easily.

Now that you have identified the module, look carefully at it. You
should
see that there are some holes near the top which are drilled but unoccupied.

```
(Top)
-----------------------------------
| |
| x.......x x.......x |
| _ x.......x |
| |S| |
| |0| |
| |1| |
.
.
.
```

The above diagram shows the component side of the Band Unit which is what you should see looking at it from the front of your radio. Note that the slot marked S01 is unoccupied. If your's has a switch on it, make sure it's open because it disables the 450-950 mHz bands if closed. If your radio does not have these bands, check this switch and also check to see if it has been hard-wired in the closed position.

The "x" indicated where the unoccupied holes are and the "........" indicates the jumpers you must make. If the jumper is already there, then you need not do anything to the radio. The jumper on the top left is to enable 905-950 mHz. The one on the top right is to enable the top right enables the 30-60 mHz range and finally the bottom right jumper enables the 20-30 mHz range. Note, I am not too sure if the mid HF transition is at 30 mHz, could be something else too. You can try for yourself, it is not critical since I put in all three jumpers for my radio. The holes are covered by solder already so you cannot easily insert your jumper wires. Ideally, use a solder-sucker or a solder-wick to remove excess solder from the holes to uncover it first. Do not apply too much heat as the surface mounted transistor nearby may melt or be destroyed. Once you have cleared the hole, slowly insert the pre-bent jumper wires into the holes starting with the one at the bottom right. Remember to clip off excess wire and do not let the wire drop into the radio and possibly short something. Use thin solder and do not apply too much. Make sure that your jumper wires are clean so that the solder will adhere to it easily.

The circuit of the Band Unit suggests that it is actually possible to enable a range even lower that 20 mHz. This is quite pointless however since the front-end is really not suitable for such low frequencies and it is unlike that you can hear anything useful even if enable. If you are interested however, contact me by e-mail. I'll give you more details.

Conclusion

Replace the cover after making sure that no bits of wire or solder are left inside the radio. Now you are ready for fun (provided you did it right). Try tuning from 19.999 (no sound) upwards and see if you get anything interesting. Usually you'll just get RFI. But when you reach about 40 mHz, you may be picking up cordless phones and walky-talkies. Once you are satisfied that works, try tuning from 905 mHz up and see if you get any cellular. Have fun while I study the circuits for more possible mods. I have received news that some FRG-9600s will not permit you to tune manually or by frequency entry, out-of-band frequencies. These frequencies can be accessed using the CAT controller program SCANNER.COM (or SCAN88.COM for XTs) with the very easy to construct interface. Meanwhile I will look into enabling tuning using the dial and keypad. This should be the next mod if its possible.

If you own one of these radios, you may want to check out my controller program and interface (easy construction) for the CAT control of the radio. The program brings FRG-9600 back into competition with the newest scanners.

I've received feedback that although the above mod allowed the radio to tune the entire range, the dial seems restricted. This restriction can be overcome by using the interface for tuning. Alternatively, you might try to reset the machine by turning off the battery for a couple of minutes to see if upon restarting, the MPU recognizes the new bands. This can be done by switching off the internal battery using the switch at the top right hand side of the front panel, under the top cover. There is a tiny slide switch there.

Have fun.

2732. Need Advice on FAIR MARKET value of New Telefunken 12AU7 Tubes?

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-25 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6d1ij2$8bf$7@csu-b.csuohio.edu>
Source record: 177280

Hi,

Can anyone advise me as to the fair market value/pricing for new old stock Telefunken Premium Diamond White Label "md" 12AU7 tubes? These test superbly with my calibrated TV-7D/U and Hickok and are the best balanced tubes I've seen in recent memory.

I just put up four for sale and sold them for $12 each to I guess a very happy fellow. Good luck to him--he paid the asking price, no problem there.

However, I have some more of these 12AU7's made in Western Germany and would like to get fair market value. You see I'm an old full time student and buy and sell items to finance my hobbies while I'm in school so I can keep wife off my back for toy expenditures until I get a real job again :-)

Any advice on fair market prices of these premium tubes would be appreciated, because I got a very good email response, so I know I drastically underpriced them. Again, no problem with the four I sold, but I'd like to do better with the rest.

Thank you for whatever advice on pricing you care to offer.

Lance a.k.a. Bostonian

>QSL direct, harass directly via e-mail.

So, you're advocating E-mail harrassment? :-)

Not to beat up on you Scott, but there have been cases of recipients of
E-mail complaining to sender's postmasters about receiving "harrasing
E-mail" when the sender has chosen to continue the argument privately
(not me, but I've seen it happen to others).

>If you have a flame to shoot at someone,
>e-mail it to said individual.

>If this person is hiding behind a wall of anonymity,
>he/she is probably not worth making the comment to.

There is also something to be said for using the newsgroups for standing
up and (politely) rebutting obviously incorrect or damaging information.
If most posts are trolls, and most rebuttals are made in E-mail
according to your suggestion, then all of the useful information is
driven underground where other readers (and there are a lot more readers
than posters) can't benefit from it, and the trollers dominate the
forum.

I (and others, I'm sure) will continue to suffer fools publicly, when
such suffering is needed to expose disingenious people and opinions for
what they are.

>With wishes for a less flame-filled newsgroup,

2737. REQ: Info on Amidon Toroids

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-25 00:00:00 UTC
From: Mark Moore <mjmoore@mindspring.com>
Message-ID: <34F45D6E.5BA3@mindspring.com>
Source record: 177285

Hi,

Can anyone recommend a supplier for Amidon Ferrite toroids? Preferably
with a low minimum order and accessible online. Thanks

Mark

2738. REQ: info on Murata filters

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-25 00:00:00 UTC
From: Mark Moore <mjmoore@mindspring.com>
Message-ID: <34F45DC7.4346@mindspring.com>
Source record: 177286

Hi,

Can anyone recommend a good supplier of Murata 455 Khz ceramic filters?
Thanks

Mark

2739. Voluntary Intercepters of WWII and G2BFC

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-25 00:00:00 UTC
From: nospam-tforbes@tcp.co.uk
Message-ID: <6d1mv4$2ki$5@zeus.tcp.net.uk>
Source record: 177287

Hello?

I have just finished a part of my home page about the Voluntary Intercepters of WWII, and I would appreciate any comments anyone has got about it.

As far as I know, there isn't anything else like it on the Web. It is unique as it tells the story of British radio amateurs during the War Years that has never really been published by any organization that I know of.

I would especially love to hear from any V.I's who were involved in these activities during WWII. Or anyone who has any information about Frank Forbes, G2BFC.

Good day to you.
Tim Forbes G2BFC
http://homepages.tcp.co.uk/~tforbes/

Oh, so you did receive the other post regarding my questioning your
observation of hams transmitting atop 40m SW broadcasters. So, why
haven't you elaborated as I requested? How can they receive one
another with that horrible heterodyne? Are they zero-beat with
the SW station? Could it be that they're not even aware that
a broadcaster is on the same freq'y? That you won't answer
these questions, is it no wonder that we view you as
a "bad guy" (your words), apparently making up
propaganda to further some anti-code agenda?
Surely, as an Extra Class ham (as you've
claimed to be), you are able to answer
the questions posed by some lowly
General Class operator, right?

Have a productive week (if you have a job),
Jeff

>103FM (KJLS), Hays

KF4DDM, 2 & 10 meter ham radio
Unit 302, "Western
>Kansas' Power Pig" on 11 meter CB
Scanner and Internet junkie as well!

And your point is? Where do you see "cbrambo@aol.com" in this post? Your eyes must be going buggy from all the hours you've been wasting on DejaNews. Also, you might notice that in the above post, Drew describes Wichita as a "nice place to visit." Doesn't sound very much like my opinion of Wichita, as evidenced by your previous post which quoted my comments on the city. Which is it, Steve-O?

>

> Of course, the Drew you
>are after is the ONLY Drew on the planet, right?
> Couldn't POSSIBLY be
>someone else, could it?

NOPE. There are probably many Drew's, it's just
>your are the Drew from
Kansas aka CB Dimbulb Tag your it...

And your legally-admissable proof of this is...

> And I'm
>sure there is no
> possibility whatsoever that I might have "planted" this
>for you to find,
> knowing full well that at least one of you ham radio
>losers would spend all day
> digging through old USENET posts in a desperate
>attempt to attatch an identity
> to me.

Nope, you are not that bright.

Your opinion. Proves nothing, as usual.

>And again, the info was had in less than
15 minutes. Of course, you could
>plant messages looking for dual tape
decks to support your bootlegging
>activities. But then again, maybe not.

Oh, here we go again with the libelous accusations. Please provide proof to
support your contention that I have engaged in "bootlegging activities." This
presents another interesting paradox for the Landing Loser. Using the
information you have so kindly provided above, we see that Drew is an on-air
host at an FM broadcast station. Since he's doing the "real thing", why would
he want to bother bootlegging and pirating on the ham bands?

> Perhaps I also have a beef with
>Drew, having read his biting comments
> time and time again when he
>frequented this newsgroup as "Drew From Sunny
> Central Florida."

Funny
>how Drew from Sunny Florida, turned into Drew from Windy Western
Kansas.
>Funny how Drew from Florida from a 3rd rate radio market to a
4th rate radio

>market. Funny how the last name in each case was Durigan.
Funny how your
>last name is Durigan And you call me the loser?? Gotta
hand it for you,
>all the smoke from burning crosses sure did damage what
few brain cells you
>might have yet.

Where are you getting all this nonsense. Again, please show proof to back up your wild accusations. To refresh your memory: "cbrambo@aol.com" does not appear in any posts associated with "Durigan." The lone exception would be a recent post where I mentioned "Mr. Durigan" with regard to the libelous tactics being employed against him by you and your friends. You're seeing what you want to see, Stevie Boy, and it's simply not there.

> The truth is that you'll never know for sure, will you?
>You
> will never be able to prove your assumptions beyond the shadow of a
>doubt...and
> that's what bothers you the most.

Actually Drew, the best is
>yet to come. All you have to do is know
someone at AOL (like I do) and they
>can put your user account with your
user names Oh my gosh....looks like
>you're about to be outed for sure.

Look for that info coming to a newsgroup
>near you.

You are lying. AOL will not divulge the confidentiality of it's members, except when under a direct court order to do so. But since you think you know everything, I will call your bluff. Prove me wrong. I have a total of five screennames on my account. Let's see you name the other four. If you can do this successfully, I will admit publicly that you are correct and "CB Rambo" will disappear forever from this newsgroup. If you cannot, you will admit publicly that you were not able to deliver the goods as promised and will be forever disgraced on this newsgroup. Deal?

By the way, I notice you kindly deleted and failed to respond to my comments about your ASSumption that I am also Rigley Case. Can't prove that one either, eh?

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

In your statement above you have just crossed over the line...all people have the right to ascess to communications, (all methods of telecommunications; radio, (both Ham and CB), phones; etc), and a handicapped person has the rigth to become a Ham just like you and if they can prove that they can operate a radio and have a working knowledge of morse, even at a slower rate than needed for the class of licence being applied for ,they can get a morse exemption. They still have to know the operating practices and theory and can be tested in special ways suited to their handicap. Yes special rights are what is needed for handicapped people as this can become a way for them to live a full life. This even applies to mentally challenged people. They can communicate as well as anyone else but the technical side is often above their understanding and they can be taught to tune up and operate a rig like any of the many Ham sets out there in Ham land, my son has a learning disability and he can operate any radio without any problem at all, he justs watched me and from that he picked up how to tune it in and even set use the ATU correctly. So next time you put your foot in your mouth ..leave it there so that you do not make a fool of your self again. I support Ham and CB operators that have a Handicap.

The earlier model 706 have an inherent defect in the 2 meter module. If
you go to the Icom webpage and go to the tech help section, there is a
fix that involves replacing several components. One of the additional
benefits is that your RX will improve 100%.

Their living a "full life" is dependent on their obtaining an amateur radio
license?

This even applies to mentally challenged people. They can communicate
>as
well as anyone else but the technical side is often above their
>
understanding and they can be taught to tune up and operate a rig like any
>

correctly.

So, are you advocating that the theory test requirements be "dumbed down" in
order to accomodate those of lesser mental ability?

> So next time you put your foot in your mouth ..leave it there so
>
that you do not make a fool of your self again. I support Ham and CB
>
operators that have a Handicap.

So do I. I also support removal of the Morse barrier for ALL amateurs and
would-be amateurs. Selective removal amounts to the granting of special rights
and privileges, no matter how you slice it.

"Where's that big 'ol CB RAMBO??"

2755. Re: Question Regarding the Radio Shack HTX-202

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-26 00:00:00 UTC
From: M Johnson <silversq@ix.netcom.com>
Message-ID: <34F58ACB.508CD007@ix.netcom.com>
Source record: 177103

Could be several things. I have noticed that mine gets warm but not hot. Do you have the belt clip connected to the back? Radio Shack uses it as a heat sink. When you are running high power are you using the rubber duck antenna or an external antenna? If you don't have a good match to the antenna the reflected power will dissipate as heat in the radio. This is also bad for the final amp. What is the supply voltage? If you are using over the rated voltage (13.8?) the radio may run hot. This is also not good for the radio.

>bands is working now. Plus you'll create a whole new market for Ameriton,
>100 watt in 200 watt out power boosters. What a great idea !

There is no indication whatsoever that the current 200 watt HF power limit
for Novices has not worked. Your CB example is irrelevant to amateur
radio. Your power booster remark is just a wisecrack..... but, do you know
anybody selling one? Another 3dB is better than a sharp stick in the
eye. :-)

To Hans: Very good proposal. Well thought out. It could work, and
would probably enjoy some support. Nice post.

> The soon-to-be-adopted-in-US CEPT agreement will potentially allow
> foreign amateurs to have privileges in the US which may be greater than
> US amateurs who have passed examinations similar in difficulty.

This actually cuts far more in the reverse. I understand that the FCC proposes to issue CEPT Class 1 Licenses to Tech+ and above, so we will have US amateurs tested only to 5wpm enjoying top privileges in European countries (and a couple of others) where the inhabitants have been required to qualify at higher speeds such as 12wpm in the UK.

There may be reasons for changing the licensing regulations, but I hope that xenophobia will not become any part of the debate. The number of CEPT operators will be miniscule and irrelevant to US activities.

Under the present UK/US reciprocal system, US General's get top privileges in the UK while UK amateurs in the US get comparatively a really lousy deal because the FCC Reciprocal Permit requires foreign amateurs to comply with their own home license. And European ITU Region 1 amateur bands are way out of whack with many US Region 2 bands, so visitors can forget all 40m phone, and virtually all 75m phone or 6m and 2m repeater use. But I never heard anyone whinge that these inconstancies made any changes to US or UK domestic regulations necessary.

BTW, I do not oppose you suggestions in general although I would prefer simply dropping the General Morse Test to 5wpm and upgrading any Tech+ to General upon successful completion of Element 3(B). I feel that there are already too many FCC HF license classes and I oppose adding yet one more. However I do request that no one links that discussion with CEPT and so perhaps brings this mutually beneficial agreement into needless controversy and worse, perhaps even into disrepute.

Michael, you should make sure that you have the belt clip attached to the back of the radio. It is designed to be a heat sink also, and will dissipate a lot of the heat from the radio. (Don't forget to leave some room around the radio so air can circulate and allow the heat sink/clip to work properly)

Maybe someone can help me. I recently purchased a HTX-202. The ht has
a tendancy to get quite hot after I have been transmitting for a while.
I was wondering if anyone else out there has a HTX-202 that also does
this, and what, if anything I need to do to prevent it from getting so
hot. I usually notice this when I am running about 4 or 5 watts. Any
help or other info on the HTX-202 would be appreciated. Just e-mail me
and let me know. Thanks!

Hi, Bostonian,
I really dont have any idea what they are worth, but I suspect that
the tube Audiophiles and musicians are the guys most after these tubes.
If I were you, I would look for some audio type newsgroups and ask
there. I do know that many of these guys say that a specific tube brand
(and even individual tubes within a brand) has different sound
characteristics. They discuss tube characteristics and use adjectives
that totally elude me (I'm not musical). Who knows, you may have tubes
which are exalted holy grails for them!
good luck
Don

> but I don't seem to be able to find out their rating.

The capacity will vary by manufacturer, chemistry, temperature and
current rate. But from the 450 mAh figure for the AA size I guess
you're talking NiCd, not NiMH or rechargeable alkaline. For the AAA
size NiCd I see catalog figures of 240 mAh. NiMH would be twice that.

This class will be free and taught by members of the U of MD ARA.

Location: U of Maryland, College Park, MD.

Tuesday nights, 7 p.m, starting Tuesday, March 3, 1998.

Talk-in for the class will be on the 145.49 (-600 kHz) repeater,
located in College Park.

We will be using the newest version (Red) of Now You're Talking.

This is an excellent text, available for $19 at Radio Shack and
numerous other locations as well.

Call or e-mail to register!

UMARA looks forward to seeing you there!

> understand but I have figured out that he is dead set against Morse
> testing. Somebody correct me here if I miss-read him.

No, you didn't mis-read him. Neither have I. We all know that Masa is against Morse testing. So am I, and I'm an extra class licensee. But that has little to do with what Masa said in his original post, and nothing to do with my reply to his post.

Masa said that ham radio is not "entertainment". He's right, except for the people who are interested in ham radio and who find it very entertaining. He said that those who don't find it entertaining will not spend the time studying for it. I agree. But then again, that's true for any *voluntary* past-time. So what was his point?

He also said that if people could use the radio to make contacts right away (without having to study for a license), then they *would* be interested. I pointed out the fact that that is exactly the case right now. You don't have to have an FCC Amateur Radio License to participate in amateur radio. If you want to talk on a radio, go visit a licensed ham operator and ask if you can operate with him/her. Most likely you'll be allowed to make as many contacts as you like. So what was his point?

In my opinion, Masa doesn't agree with Morse testing, but instead of coming up with valid, sensible reasons why it should not be part of the licensing requirements, he invents stupid stories, non-existant events, and excuses.

Don't let this idot get your shorts in a bunch. This guy is one of thoes "wanna-be-a-ham as long as I don't have to work for it" CB'er. He claims that he has a amateur licence but always fails to produce a callsign on request. I guess he thinks someone he pisses off might look up his call and post his address. Personally I don't care about his works of fiction that the FCC will abolish ham radio. I think it's more likley that the 11 meter band will suffer that fate eventually.

All of the kinds that eat pussy are ok. The kinds that are female are just fine, welcomed into my community. The hairy assed, dick breaths that are male are not welcome. Stay out. Git up into my face with your shit and I'll hurt you!

>eye. :-)

There are no indications that there are any novices anymore, at least not
in my receiver.

The CB example is very relevant to ham radio, considering the same FCC
that enforces the rules on 27mhz enforces them on the amateur bands.

No, I don't know anyone selling any power boosters, but I do know one new ham
here who has developed a tuning proceedure for Ameriton amplifiers. By
using his proceedure, you need 200 watts of drive to get 280 watts output.
The only drawback seems to be that you have to replace the coils in the
amplifiers tuned input about once a week......

Hans:
I got a strong feeling that is what we will see in the next two years in the United States. A cept style license class structure with one exception to what you have posted above, the number of license classes will be reduced from five to three.

The FCC is calling for a streamlining of Amateur licensing procedures in their Biennial Report issued this month and plans to open up the requirements for Public Comment along with changes to Part 97. The CEPT agreement license structure would not only reduce the number of license classes but simplify the testing and records keeping and reduce cost. We would already have an international agreement and a proven system to base our new license structure on that most of the problem areas have already been identified and solutions found by the countries that are presently using it.

An interesting sidenote:
Did you see where the ARRL Board of Directors voted to offer a full privilege International Membership to people who could not qualify for a U.S membership based on location.

I Have For Sale A Icom 251A 2-Meter All Mode Radio With Vox & With IC-HM7 Amplified Microphone.
This Radio Operates Perfect, Just Recently Used It In My First ARRL VHF Contest.
The Radio Is Very Clean & Comes With The Box, Manuals, & Schematics.
Only Problem Is That The S-Meter Is Stuck In The Middle & Was Like That When I Bought The Radio Last Year. This Radio Has A Very Sensative Receiver & Is Very Impressive On The Air. I Am Selling Because I Purchased A New Kenwood This Last Weekend. I Would Rate This Radio 8.5-9
The Price Is 375.00 PrePaid Plus Shipping.

2796. The Logic Of The Landing Loser (was: Re: Drew IS CB Dimbulb aka CB Bigot)

"I wanna hear him TALK TOUGH!!"

So let's review...CB Dimbulb is
>now living in Kansas...hmmmmmm

Not so fast, oh ignorant one. You better go back to "Newsreader 101" and learn how to quote properly. The "I live in Wichita" statement was made by the previous poster. I responded with the line abouit blacks and Mexicans. Yes, Steve-O, I have visited Wichita and it is indeed a little too "culturally diverse" for my own personal tastes. However, I do not live there. Never said that I did. I challenge you to prove otherwise.

here.
I just moved up from
>Orlando; now THERE'S a crime mecca if I ever saw
one!

"Where's that big 'ol
>CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

Let's review...the poster
>actually calls Dimbuld by his name and he
responds. Dimbulb is now in
>Kansas having moved up from Orlando, same as
Drew...

Of course, the Drew you are after is the ONLY Drew on the planet, right? Couldn't POSSIBLY be someone else, could it? And I'm sure there is no possibility whatsoever that I might have "planted" this for you to find, knowing full well that at least one of you ham radio losers would spend all day

digging through old USENET posts in a desperate attempt to attatch an identity to me. Perhaps I also have a beef with Drew, having read his biting comments time and time again when he frequented this newsgroup as "Drew From Sunny Central Florida." The truth is that you'll never know for sure, will you? You will never be able to prove your assumptions beyond the shadow of a doubt...and that's what bothers you the most.

>What a loser you are
>Durigan. I did notice that your puncuation is a tad
poor. I'm surprised an
>anal retentaive racist such as yourself failed to
catch that.

(more unrelated nonsense from Landing's Looney Loser)

Actually I am
>impressed that you could carry the farce for so long. Too
bad your Rigley
>Spearmint gum facade failed. What next, CB
Crossburner??? How about CB
>Skinhead.

Ah, here we go with the Landing Loser's other ASSumption. What? Now I'm Rigley? Wait a minute, I thought I was Drew. Oh yeah, that's right...I'm both Drew AND Rigley. Okay, I got it now. The World According to the Landing Loser. Don't you wish you were bright enough to trace an Internet posting to it's true and original domain? I have. When and if you ever develop the necessary intelligence to do so, you will then be confronted with an amazing discovery: you will learn that Rigley's postings do not originate from a Kansas-based ISP. Therefore, your theory that Drew = CB Rambo = Rigley Case is incorrect and must be thrown out. But don't worry, Lonely Loser....since you're not bright enough to trace the posts, you will not soon be confronted with the truth. You can go on believing your little ASSumptions and live happily (although ignorantly) ever after.

"Where's that big 'ol CB RAMBO??"

FS/FT Icom IC-735 Accessories

I have the following Icom IC-735 accessories for sale:

AT-150 Matching Automatic Antenna Tuner $ 300.00
PS-55 Matching HD AC Power Supply $ 125.00
735QSYer QSY Console $ 75.00

AES price for a new AT-150 is $ 499.95, and $399.95 for a demo/used one.

AES price for a demo PS-55 is $209.95, and $ 159.95 for a used one.

Above prices do not include shipping. Buy all as a package, and I'll
cover the insured 3 day select UPS shipping.

All are in mint condition. Not used more than 15 to 20 hours, always
covered when not in use, with original cables, manuals, and boxs.

Will consider trades, especially for Collins RE 516-F2 Power supply,
RE 312-B4 or -B5 Console, and SM-1, -2, or -3 microphone.

>is no longer a popular "entry point" info amateur radio,
>and upgrading to Tech-Plus would entail only a short
>written test.

While I agree that getting rid of the Novice is a good idea, a perhaps
better idea would be to grandfather the existing Novices, and not allow
future tests for the class. The present Novice setup on HF could be
easily mostly retained even under your present scheme, and 222
and 1296 usage isn't so high that it can't use the present novices.
I also suggest that when the FCC split the tests for tech and
general it made a horrible mistake, and increased the number of
tests necessary. Even a technician without knowledge of code
isn't harmed by having to learn something of HF propagation and
proper behavior on the air. It would also give Tech licensees something
in common with other hams. I also wonder just how many people
actually fail the present general exam, and if it truly prepares folks
to get on HF in the first place. I would hope that instead technicians
pass a code exam and get HF privileges, ending the present bifurcated
system we have. I also note that your split gives mostly voice
privileges on HF, and I suspect that any growth in CW usage requires
exposure to the mode, rather than time on HF. Please note, I would
have no objection if every morse code exam was 1 word per day with
a little card beside the examinee with dots and dashes indicated, since
the International treaty obligations don't require any set speed, only
the ability to decode by ear, and someone able to decode one word
per day or hour technically meets that, but I also suspect that would
make meeting CEPT requirements more difficult. Your scheme
still has the problem of someone with 5 wpm cw skills having to
upgrade to reach advanced or extra class, and I note that few of the
heavy cw operators seem to have the patience to work at let's say
8 wpm to help someone upgrade, it seems to be a badge of honor for
some to send as quickly as possible as badly as possible even with
keyers (I feel really funny saying this, but shouldn't folks using a
keyer learn how to space their cw?), and slowing down is only done
rarely.

Your suggested scheme would give folks an incentive to upgrade, but I'm
not sure if will do more than let folks get on the air and talk. I note for

example that most HF voice work is still in the general portions of the bands.

I wish him and his attorneys good luck. But he'll have to file a
class-action lawsuit together with all the Drews on Usenet, since
I never mentioned the dork's last name.

> Have you ever told someone how to modify a scanner for full 800Mhz
>coverage?

Nope. In fact, I own an 800XLT; when it arrived from Uniden, there
was a placard in the manual, warning the user not to listen to
two bands of 800 MHz frequencies. In the 10 or so years I've
owned that scanner, I've never listened to those frequencies.
I know your criminal mind will find that difficult to believe,
but it is the honest truth. Unlike you, I respect the law, and
I respect the privacy of others. To eavesdrop on their conversations
is no different than peering in their windows with binoculars.
(Now, every time I see that QualComm commercial with the scanner
listeners hiding in the cafe, I'll think of you.)

>Personally, I could care less.

Personally, I *couldn't* care less.

Have a productive week,
Jeff

I believe you misunderstood that action.

The International Membership class is not a full-privilege class at all.
They are equivalent to "Associate" and cannot vote or hold office.

Here is an excerpt from the minutes which established that class.

...the first sentence of Article 10 of the Articles of Association
is amended to read as follows: "The membership of the League shall
consist of (a) Full Members who shall be entitled to all rights and
privileges of the League except as otherwise provided in these Articles,
in the Bylaws, or in the Rules and Regulations of the ARRL Field
Organization, and (b) International Members and Associate Members who
shall be entitled to all rights and privileges of the League except
the right to vote for Directors, Vice Directors and Section Managers
and the right to hold office."

Dear Prospective Customers,

We are a newly formed company dealing with radio communications equipment for both commercial and amateur based in Kuala Lumpur, Malaysia. We are offering these equipments for sale at a very special discounted price due stock clearance. We are able to sell at a very competitive price due to purchasing them in large lots from Japan and due to cost of the products quoted in the local currency before.

All products are brand new and fully guaranteed. Eg. HF transceiver from ICOM (IC-706 MkII) is being offered at US$1120.00 (excluding freight) against the current price of US$1289.00 offered by other radio dealers in the US. Please allow 1 week delivery after clearance of checks. We accept checks in US funds only.

For quotes of all other products available and further queries, please e-mail to hamsupplies@trust-me.com or phone ++ 603 9439284
fax: ++ 603 2513775 attn: Farez . We will promptly entertain any of your queries.

Sincerely,

Megat Farez (Managing Director)
HamSupplies International

Sounds like you popped the TR PIN diode Masa. Bet you transmitted
on HF with the antenna too close to the 2m antenna. That usually
does it.

It is called a notch filter, Jeff. Most modern radios have them.
The energy in an AM sideband is *much* less than the carrier
power, so the power rating of those stations is a bit misleading
as to their interference potential. They aren't supposed to be
broadcasting to Region 2 anyway.

Fol-ups to this will only appear on .policy:

Tim Gort <wicket@olypen.com> wrote:
>The HAM bands have been a lot like CB for some time.

Tim, in 1912, *some* hams QRM'd Titanic-related messages. In 1998, *some* hams continue to act badly. But, taking into account there are over 700,000 of us today, I'd say as a group, we're very well behaved, especially with viturally no one (FCC) overseeing our day-to-day on-the-air operation. The riff-raff you hear on the bands today is a very tiny percentage of that 700,000. Concerning the riff-raff you hear on HF, keep in mind that due to the nature of propagation, if someone so much as sneezes, half the world might hear it! Just because you hear a dozen or so jerks, you shouldn't say "the ham bands sound like CB."

>Code poficiency
>never has and never will equal or promise good character.

You have to go where it's being used to find the good-charactered operators.

>I have
>met in my own home town, excellent code operators, who were very
>interested in seeing that I learned things their way, but had no
>respect for what I had to say or contribute.

>Before I go any further, I will say that although I don't have a code
>license and am not interested in operating code,

Then how do you know those guys are "excellent code operators"? Regardless, how they reacted to you depends upon how you reacted to them. We have no way of knowing how you initially came across to them - maybe you can ask them to QSY over to here so we can hear their side of of why they had no respect for what you had to say or contribute. Just saying, as you did above, that our bands sound like CB, causes me to suspect that you might not have made a very good first-impression upon those other fellows in your town.

>I guess the point that I'm getting to is that the whole Code/
>No Code argument is the simptom of a larger and more complicated
>conflict of young vs. old,

Find some 1920s back issues of QST magazine; Maxim ("The Old Man") used to scold the young pup operators in his editorials for their on-the-air behavior. The young versus old conflict is as old as

ham radio itself. It probably also occures in model railroading,
stamp and coin collecting, sport flying, et cetera.

>traditionalist vs. modernist,

You are involved in an 90 year old hobby.

>the local Ham radio club that I was a member of had
>meetings twice a month. I had a hard time getting to the meetings
>regularly, but had an idea to do a Ham Radio/Technology TV show

>questions and comments, I got stares. Stares as if I had corn
>growing out of my ears. Here I was, trying to contribute in a way
>that I am skilled in (a local TV show would have brought a lot
>of knowlege of Ham Radio and technology to the public and other
>Hams as well), but they just didn't care.

Amateur astronomy is a very fascinating and technical hobby, too -
the TV station still might have reacted negatively had you
proposed a program devoted to that field.

Informative programming doesn't necessarily equate to high
viewership, especially with 50+ TV channels available to most
cable subscribers.

Enjoy the weekend!
Jeff KH2PZ

Oh, but global attacks are fine? Did you stop to consider how your
"ghetto" comment might make Novices feel? That term reflects negatively
upon the people who inhabit such an area. Shame on you, Hans.

Enjoy the weekend!

Despite the fact that I believe Spew/CBBimbo/MNManiac/whatever-his-screen-name
at-AOL-is-this-week is a complete utter moron, in no way can I support
printing someone's public comments on USENET and mailing them to an
employer.

USENET is a town hall. It is a public forum. We all have (in the US
anyway) something called "freedom of speech". That also means (as in
Spew's case) that we can be morons if we want to.

What someone says in a public forum should have *NO* bearing on what
his employer/employee relationship is. I believe your actions to be
"over the line" of common decency, Steve.

Let me put it to you another way:

If you are a staunch Republican, should your employer be able to
fire you because he is a staunch Democrat?

What Spew posts on USENET has no relation to his job performance.
He is not representing himself as a "official spokesman" of his
employer. His views do not represent his employers' views. While you
might not like what he posts, that is your perogative, but what
he posts is irrelevant to whatever function he performs at his
place of employment.

I am particularly sensitive on this issue because the same exact
thing happened to me several years ago, when someone decided to
start mailing postings I made, from my own personal machine at
home on my own personal time, to my employer with a "complaint
letter". My employer had the foresight to ignore the letters.
This is why, now, unfortunately, I have to include the one-line
disclaimer about "my opinions" in my .signature.

It is nothing short of personal harassment, a-la "SLAP" lawsuits to shut someone up, to do what you are proposing to do. I find it a personally repugnant action, and urge you to retract your intention.

MD

Matt K, many CBers us Kenwood TS-950SDX or other amateur band radios.
They appear to stay on their turf for the most part, even tho their
radios will actually perform better on the ham bands.
On the other hand, many of the HF trouble makers sport CW enabled ham
calls.
Go figure.

I'm afraid Jim's right.
I was the last Novice on the Novice 40M subband. I shut the door and
turned off the lights after the last of many unanswered CQ's back in
87'. Then I "lateral-graded" to Technician.
Brian/N0iMD
PS: Jim, don't give us this BS that you're one of those benevolent
extra's that cruises the novice subbands looking to give a little CW
practice.
By the way, I didn't see your entry in the oceana 160 or 80M CQWW this
issue. Did CQ ever give you the plaque for your 1 QSO entry in 88'?

>
> And Steve lies .

How so Burt. Evcerything typed was either taken verbatim from your page or from past articles (June 97) from DejaNews. All easily verifiable if you knew how to do it. Your comment shows you don't.

Loved the fact you called me a liar based on a quote YOU had on YOUR psycho-cyber whine page. Yes Burt, the quote came from you and somehow you attempt to attribute it to me. In fact, all the information you conveniently forgot is in DejaNews under the title (s) ARRl and Nazi's.

Face facts, you lost out because you failed to adhere to the rules and not because you're some sort of non descriptive minority that you profess is the reasoning for your revocation of your VOLUNTEER status.

Just remember Burt, next time you attempt to toss out insulting terms, I suggest you practice on yourself in a mirror, especially when you use the term Nazi's..seems you like to take pages from their playbook on a regular basis.

Toodles sweetcheeks. Maybe you and the CB Rambo can get together and try to put a thought together. A pair of psycho Dudes like you..charge a buck to see you both in action. Hell, I'd even pay to see that.

I've ordered them from Digikey, I believe. (www.digikey.com). They have their entire parts manual on line in PDF format. It's pretty handy; I ordered some parts at 1 a.m. on a Saturday morning (one of those late night projects :-)], got a confirmation e-mail the next day, and parts arrived on Wednesday. Very handy!

Ivor,
Without doubt, the American who replied is confusing Beer with Lager!
Lager needs to be drunk cold, but as for Beer, esp. Real Ale as you stated,
it's optimum temp is nowhere near that of Lager.
A nice pint of Dogbolter would go down fine right now!

Alan

2828. FS: Two RCA #45 Used Tubes

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-27 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6d6kmi$a05$4@csu-b.csuohio.edu>
Source record: 177004

Two RCA #45 used tubes for sale with my actual TV-7D/U's readings/ratings for each tube.

Tube dealers due to large volumes of tubes generally cannot spend the time to give you the actual "performance" of the tube on a calibrated TV-7D/U tester in excellent shape (Please understand your readings can vary obviously). They simply say the tube passes usually and you could get a mediocre pass at best to decent very strong tube with the luck of the draw that's really like a new tube. I have had this experience.

Have rated and priced the following two tubes accordingly:

Tube 1: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 78

Asking price $50.00 or B/O plus shipping. This tests approximately like a new tube in my opinion!!!

Tube 2: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 65

Asking price $40.00 or B/O plus shipping. This is a strong used tube in my opinion.

International buyer welcome.

Thank you.

Thomas McCain <tommac@swbell.net> wrote:
>I am looking for a simple ID and timer circuit for my NASA audio
>rebroadcast.

I have recently built an automatic CQ caller featuring a digital message recorder.

It features:

1. 555 timer circuit - 15 sec on, 45 sec off - from Forest Mimm's 555 book.

2. transistor switch to apply 12v during the on period

3. Reed relay to switch the transceiver's PTT

4. LM317 regulator to reduce the 12v to 3v for the voice recorder

5. Keyring style 20 second message recorder onto which the CQ call has been recorded. Output fed into transceiver via 5k pot. Switchable monitor speaker.

The audio quality of the system is first-rate and is indistinguishable from a live voice.

The results (in terms of time saved and number of contacts obtained) are great!

The above system may be modifiable to suit your needs.

E-Mail: newsline@ix.netcom.com
Internet: www.arnewsline.org

PRESS RELEASE
February 22, 1998

1998 YOUNG HAM OF THE YEAR AWARD NOMINATING PERIOD NOW OPEN

The nominating period for 1998 "Young Ham of the Year Award" is now open. Originally known as the "Westlink Report Young Ham of the Year," this award program, now in its second decade, is presented annually to a United States licensed Radio Amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby/service.

Any continental United States (FCC licensed) ham radio operator aged 18 and younger who has used Amateur Radio to significantly contribute to the benefit of the service, to the sate of the communications art, to their community or the nation is eligible to be nominated.

All nominations must be submitted before June 30, 1998 on an official application. Application forms are available for a self addressed stamped envelope mailed to the 1998 Young Ham of the Year Award % Newsline, 28197 Robin Avenue Saugus California 91350. The nominating applications are also available for electronic download from several sites that provide Newsline materials over the World Wide Web and including the Newsline website at www.arnewsline.org.

With continued corporate sponsorship, the award presentation is scheduled take place at the 1998 Huntsville Hamfest. The Huntsville Hamfest is one of the nations largest and most popular Amateur Radio conventions. It is held annually the third weekend in August at the Von Braun Civic Center in downtown Huntsville and usually attracts 7000 or more attendees. The 1998 "Young Ham of the Year" will also get to spend a week at Spacecamp-Hunts-ville.

The Young Ham of the Year Award program was conceived in 1985 by then Westlink Report "Editor-in-Chief" Bill Pasternak, WA6ITF. His desire was (and still is) to highlight the accomplishments of the nation's many young radio hobbyists, and to encourage the entry of more young people into the exciting and rewarding hobby of Amateur Radio.

With the absorption in 1995 of the Westlink Report readership base into Worldradio Magazine, the awards originator has decided to continue it under the banner of his own "Amateur Radio Newsline" organization. It is his belief that this real-life experience may lead the award winners and many other young hams into technology based careers that will make them the scientific leaders of the future.

The Amateur Radio Newsline, better known as "Newsline" is the worlds largest not for profit and totally independent ham radio broadcast news and data information service. It was organized in 1976 by Jim Hendershot WA6VQP and Bill Pasternak WA6ITF. Since that time it has produced and put to air over 1070 consecutive weeks of news of free bulletin programming dealing with Amateur Radio and related personal communications issues.

Corporate underwriting for the "Young Ham of the Year Award" program is traditionally supplied by Yaesu U.S.A. Corporation and CQ Magazine. Yaesu is a world leader in the design, manufacture and distribution of high quality Amateur Radio and commercial two-way radio equipment.

CQ Magazine and its sister publications CQ-VHF and CQ-Contest are owned by CQ Communications and are considered the trend-setting publications serving todays modern radio amateur. The continued support of this award by Yaesu and CQ has been well-received within the U.S. Amateur Radio Service.

The United States Amateur Radio service is force of over a half-million publicly spirited personal radio operators who are licensed and regulated by the Federal Communications Commission. They provide the nation with a pool of trained radio operators and technicians to assist the United States in improving international relations. They are also available as a voluntary group of skilled public service-oriented individuals with their own radio equipment who are available to provide emergency communications in times of disaster.

Past recipients of the Young Ham award, all of whom epitomize the heart of dedication to their nation include Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986); David Rosenman, KA9PMK, of Muncie, Indiana (1987); Jonathan Binstock, NK3D, of Potomac, Maryland (1988); Erin McGinnis, KAOWTE, of Topeka, Kansas (1989); Mary Alestra, KB2IGG, of Staten Island, New York (1990); Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991), Angela (Angie) Fischer, KBOHXY, also of St.

Louis (1992); Kevin Boudreaux N5XMH of New Orleans Louisiana (1993), Allison Zettwoch KD4CKP of Louisville Ky. (1994), Adam Weyhaupt, N9MEZ (1995), Toby Metz, KB7UIM of Boise Idaho (1996) and Brian Mileshosky, N5ZGT, of Albuquerque New Mexico (1997).

-30-

THE 1997 YOUNG HAM OF THE YEAR AWARD NOMINATING FORM INSTRUCTIONS AND AWARD RULES

1) Fill out the attached nominating form completely.

2) EXTREMELY IMPORTANT: You are required to supply full and complete verification of any claims made regarding your nominees qualifications. The more documentation that you supply, the easier it will be for our judges to reach a decision. Nominations without this documentation will be returned without being given consideration.

3) This award is not a contest for a prize. Any prizes given are secondary in nature. A person selected as "Young Ham of the Year" is judged on his/her contributions to society through Amateur Radio. For example, a youngster whose only claim to fame is that of being licensed as an Extra at age four would not necessarily be judged as having made a significant contribution to the Amateur Radio service. On the other hand, a 14 year old Novice running a net during a major disaster or crisis would definitely be given consideration.

4) The Amateur Radio Newsline (Newsline) sponsors the award program and guarantees that the winner will receive a plaque noting that honor. All other gratuities are provided at the option of any corporate underwriter. An underwriter may, at its choice, provide the winner with a trip to an Amateur Radio convention or hamfest of our selection. If awarded, this trip will be limited to transportation for the winner to the venue, hotel accommodations, convention and banquet tickets and a prize. Not covered are any miscellaneous costs such as local transportation, incidental meals, locally made purchases, etc.

5) Neither Newsline or any corporate underwriter provide transportation or lodging for a parent, other relative or guardian traveling with or accompanying the award winner to the convention city. A parent, relative or guardian is free to share accommodations with the winner based on their personal arrangements.

6) In the event that a winner is unable to travel to the convention, the Newsline will attempt to arrange a special award ceremony where the recipient resides; I.E.: in his/her school, before his/her radio club, etc. In this case the trip to the convention will be forfeited by the recipient, but all other aspects of the award will remain.

7) Decision of the judges is final.

8) Please mail the nominating forum along with all substantiating materials before June 30, 1998 to the 1998 Young Ham of the Year Award, 28197 Robin avenue, Santa Clarita Ca. 91350

I Have For Sale A Icom 251A 2-Meter All Mode Radio With Vox & With IC-HM7 Amplified Microphone.
This Radio Operates Perfect, Just Recently Used It In My First ARRL VHF Contest.
The Radio Is Very Clean & Comes With The Box, Manuals, & Schematics.
Only Problem Is That The S-Meter Is Stuck In The Middle & Was Like That When I Bought The Radio Last Year. This Radio Has A Very Sensative Receiver & Is Very Impressive On The Air. I Am Selling Because I Purchased A New Kenwood This Last Weekend. I Would Rate This Radio 8.5-9
The Price Is 375.00 PrePaid Plus Shipping.

Im looking for schematics on an AM transmitter that is small about
2 x 1.75 x .75(LxWxH). I would like it transmit about 1-2 miles. or as far as
possible with a device of its size. You could say this device could be used as
a bug, but of course i wouldnt do something like that. any help is appreciated.

Thanks

>transmissions, keep your damn signals off of my property.

Peering into your neighbors home, even when you're in your own home,
is being a "peeping Tom," illegal in many jurisdictions. So if
intercepting your neighbor's photons is deemed illegal, how is that
any different from intercepting your neighbor's telephone transmissions?

One might go so far as to state you *do* peer into your neighbor's
homes, Rambo - your binoculars in this case happen to be a scanner.

FOR SALE: YAESU FT-50 Dual Band Hamradio
In excellent condition, only 2 months old and almost never used

-22 Channel
-5 watt transmit
-Selectable Scan
-Dual Band (VHF/UHF) Ham Band
-16 key DTMF Pad
-Field as well as computer programmable
-Computer programming software included
-Charger, antenna
-Xtra battery included
-Comes in original box with manual.

Great Buy...excellent radio!

Email me now for price.

Purchase: You send check first, then radio will follow immediately.

>tiny little frequency ghettos where they meet no-one except more
>Novices and Tech+ licensees. Then we are surprised that few of
>them become "mainstream" operators!

Thousands of hams began their radio life as Novices, confined to
a couple hundred kHz, limited to 75W *input* power, and were given
12 months to upgrade or lose their license. Today, those in the
entry level grades are given a rose garden compared to their
peers of yesteryear. The restrictions are there to provide
an incentive to upgrade. If one doesn't wish to advance, that's
their decision and theirs only. At least their ticket won't be
revoked after one year, as in the past.

The "ghettos" you speak of are where many Generals, Advanced, and
Extras spend time in order to keep the Novices company and help
them with their code speed. You should spend some time there, Hans.
You won't catch anything, honest. All you need is patience. But
to propose a restructuring rather than to develope the necessary
patience is absurd.

>Remove the current CW allocations for Novice/Tech-Plus, and substitute
>the following CW/Data allocations (200W max power output) in "mainstream"
>portions of the bands:

The fact that you hear all grades of licensees operating in the "ghettos"
does make those regions part of the "mainstream." (When I was a Novice,
I never thought of those precious segments as being out of the ordinary.
You, though, must have had some bad experiences there that left deep
scars. That's okay, Hans - you can leave he Elmering to us - we won't
ask you to get your feet dirty inviting you to join us.)

>100 watt in 200 watt out power boosters. What a great idea !

There are lots of limitations that can easily be ignored, yet that
doesn't eliminate the validity of such limitations. When I was a
novice we had a 75 watt power limit. It worked pretty well.
The assumption that many will violate stated power limits
is without justification. Might a small number do so, sure, but that
doesn't change the validity as said before.

As to the Ameriton 200 watt amp comment...so what? In
reality, how many people are going to go for a 200w amp
over the basic 100w typical transceiver output anyway?

Many users have found it helpful to reduce the DC voltage to 11 volts. It lowers the output power, but the radio runs cooler and will last longer.

In article <6d56bs$rih@news.Hawaii.Edu>, jeffreyh@Hawaii.Edu (Jeffrey Herman) writes:

: K0HB@USA.NET wrote:
:
: >US licensees who have passed a Morse test at 5WPM, unless they can
: >obtain a medical credit, are consigned to a few narrow HF frequency
: >sub-bands and never get a taste of "mainstream" amateur operation.

Jeff:

That's absolutely correct. All is right with the world.

: >We have long sequestered the Novices and Tech+ folks away on
: >tiny little frequency ghettos where they meet no-one except more
: >Novices and Tech+ licensees. Then we are surprised that few of
: >them become "mainstream" operators!

Well, you can thank "Novice Enhancement" for that. Novices don't work CW anymore! Now, all they do is tune through their 200 KHz of SSB bandwidth on 10-meters, hoping for the day when the code monster is slain and they can do some "real" hammin'! Yep, now they're talkin', an' they ain't beepin'! C'mon back?

: Thousands of hams began their radio life as Novices, confined to
: a couple hundred kHz, limited to 75W *input* power, and were given
: 12 months to upgrade or lose their license.

Ah, yes...the good 'ole days! I'll bet at least 80% of them DID upgrade in that year! Great incentive -- but wouldn't work in today's politically correct, dumb and dumber, Welfare-State. Nyet, Comrade Kommissar -- ve don't vant no steenking Morse Kode test! Eet ees unfair to the vorking people!

: Today, those in the
: entry level grades are given a rose garden compared to their
: peers of yesteryear. The restrictions are there to provide
: an incentive to upgrade. If one doesn't wish to advance, that's
: their decision and theirs only. At least their ticket won't be
: revoked after one year, as in the past.

: Nyet, Nyet! Ees a steenking plot of the Bourgoise elitists to keep the
: vorking man down in the lower rungs of the socio-economic strata
: of the ARS!!! Power to the Proletariat! Do away weeth the Morse Kode
: tests!

: The "ghettos" you speak of are where many Generals, Advanced, and
: Extras spend time in order to keep the Novices company and help
: them with their code speed. You should spend some time there, Hans.
: You won't catch anything, honest. All you need is patience. But
: to propose a restructuring rather than to develope the necessary
: patience is absurd.

Hans has obviously sold his soul to the powers of the terminally
politically-correct. I could see that the minute I saw the word "taste,"
as in the present day Novices/Techs can't get a full "taste" of HF
operation! I never got a full "taste" of anything, and I upgraded
anyway! Where was my "taste?" Go "taste" a high-voltage power
supply, Novice/Techs!

: >Remove the current CW allocations for Novice/Tech-Plus, and substitute
: >the following CW/Data allocations (200W max power output) in "mainstream"
: >portions of the bands:

: The fact that you hear all grades of licensees operating in the "ghettos"
: does make those regions part of the "mainstream." (When I was a Novice,
: I never thought of those precious segments as being out of the ordinary.
: You, though, must have had some bad experiences there that left deep
: scars. That's okay, Hans - you can leave he Elmering to us - we won't
: ask you to get your feet dirty inviting you to join us.)

: Jeff KH2PZ

Right on , Jeff! I do a minimum of 50% of my HF CW operating on the
"Novice" bands, assuming I can find some CW-capable Novices to work!
Funny, but I didn't hear many slow-speed QSO's going on there during
the CW contest last weekend! QSO "rates" obviously not high enough!

Oooops...I forgot...the code test is keeping a lot of "good people" out
of amateur radio! Well, that's OK with me, since it's probably keeping
many times more "bad" people out as well!

The HAM bands have been a lot like CB for some time. Code poficiency never has and never will equal or promise good character. I have met in my own home town, excellent code operators, who were very interested in seeing that I learned things their way, but had no respect for what I had to say or contribute.

Before I go any further, I will say that although I don't have a code license and am not interested in operating code, I don't complain about it. If my desire to operate on HF is big enough, I'll put my nose to the grinding stone and learn it in order to pass the test. I don't think that code is useless or bad, or that the requirement for code should go away, I'm just not interested in doing it.

I guess the point that I'm getting to is that the whole Code/ No Code argument is the simptom of a larger and more complicated conflict of young vs. old, traditionalist vs. modernist, etc. For instance, the local Ham radio club that I was a member of had meetings twice a month. I had a hard time getting to the meetings regularly, but had an idea to do a Ham Radio/Technology TV show for public access. Despite presenting a clear plan and asking for questions and comments, I got stares. Stares as if I had corn growing out of my ears. Here I was, trying to contribute in a way that I am skilled in (a local TV show would have brought a lot of knowlege of Ham Radio and technology to the public and other Hams as well), but they just didn't care.

Code is an efficient means of communications that doesn't require fancy electronics and/or complicated methodology. For that reason, it should stay, not for the stupid contention that code proficiency means good character, dedication, responsibility, respect, or worthyness. It takes just as much work and dedication to learn or utilize anything, HAM related or not.

That's my 2 cents
Tim KC7LEC

2858. Drew and CB Dimbulb not the same??

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-27 00:00:00 UTC
From: kf2ti@planet.net
Message-ID: <MPG.f608b77cf77df56989978@news.planet.net>
Source record: 177071

Well, let's look at this

Drew moves to Kansas, CB Rambo moves to Kansas
Drew is a bigot and a racist, CB Rambo shares not only the same views but expresses them identically. They both even are anal retentive when it comes to spelling, they both despise amateur radio, yet hold "coded" licenses and they both advocate criminal behavior

BUT...they are not the same

OK Dimbulb, I'll concede. Drew Durigan is not Clark Kent, and you are not eve his alter ego Stupider Man.

You are not related except possibly by the fact that the 2 of you are actually gay lovers, by reasoning of your undying defense of him and the fact that both of you seem to (1) live together.

No seriously, you're just a punk ass cracker hiding behind an anonymous screen name, too ashamed of your true identity.

So... I'll play along. In a previous post you stated that you possibly had a problem with the Drew person and his biting comments. I'll go one step further, I despise racist, bigoted, arrogant people like Drew and I certainly don't appreciate their ability to voice these opinions on public airwaves, which I believe, you stated belong to the people.

Therefore, over the next few days, I am actually going to spend them time in DejaNews compiling ALL the bigoted, racist, homophobic remarks posted by Drew Durigan and his alterego MN Maniac and I will be e-mailing then to Durigan's station and general manager.

Since you are NOT Drew and you are on record as not necessarily supporting his views, it goes to reason that YOU, CB Rambo, by virtue of your NOT be Drew Durigan, should have NO problem with this.

As all these posts are a matter of public record, there could be legal recourse against myself, or anyone else you forwards these comments.

Since you are NOT Drew Durigan, then you should have to fear of losing whatever job it is you do in Windy Western Kansas.

I am sure YOU, CB Rambo, would like to see Drew Durigan taken off the air, I know I do.

So again, other than the fact you are a gutless little man, I concede you are NOT CB Rambo.

BTW, as to the AOL thing. Saw your comment and "officially" they will
not
release the information, HOWEVER, it's not what you know,. it's who you
know...and I do know!!!!

Good luck to you CB Rambo, I'm glad you're not Drew, I wouldn't want to
be in his shoes in another week.

2861. Open Challenge and Final Words to Steve in New Jersey

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-27 00:00:00 UTC
From: cbrambo@aol.com
Message-ID: <19980227143601.JAA08325@ladder02.news.aol.com>
Source record: 177074

Just finished wading through Steve-O's usual morning drivel. As usual, he fails to provide documention or verifiable proof for any of his ASSumptions or wild allegations against me.

I've grown tired of this game. It's like playing chess with yourself. He makes a statement, I ask him for proof, and he changes the subject or conveniently chooses not to respond to the item in question. If I'm getting tired of this, I'm sure the rest of you are, too. However, I have a solution.

Possibly the wildest claim of all made by our friend is that he "knows someone" within AOL who will divulge personal information about their customers to him. I believe his actual statement went something like this:

>Actually Drew, the best is
>yet to come. All you have to do is know
>someone at AOL (like I do) and they
>can put your user account with your
>user names Oh my gosh....looks like
>you're about to be outed for sure.

>Look for that info coming to a newsgroup
>near you.

Anyone who knows anything about AOL realizes this is sheer lunacy. AOL will not release this sort of information, unless under a direct court order to do so. If they were to do this, the legal liabilities against them would run in the millions. But to give Steve-O a chance to prove himself, and to hopefully put an end to this nonsense, I offer the following challenge:

I have a total of five AOL screennames. "CB Rambo" plus four more. All you have to do is name the other four. If you can do this successfully, I will admit to holding the screennames in question and disappear from this newsgroup forever. You will never see another post from "CB Rambo." However, if you cannot provide the correct information, you will then admit that you could not live up to your boasts of being able to obtain said information. You will also apologize to other members of this newsgroup for your foolishness, as I will do if you can successfully provide my other four screennames.

This is your challenge. Take it or leave it. Since you will not provide proof of your previous accusations against me, despite repeated requests to do so, I choose not to spend anymore time on you or on this issue. Prove me wrong, Steve-O, and we'll settle this once and for all. Take the challenge.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK TOUGH!!"

Around 1978, there were a whole bunch of CB to 10 Meter articles in 73 magazine. At one point, they even offered a listing of all those articles, and then you could order the one that applied to your set. They might still do that, for all I know.

The conversion depends on the CB set. Over the years, there were various schemes used in CB sets, from the earliest where you needed one transmit and one receiver crystal for each channel, to schemes that used a number of crystals mixed together to provide all channels, to the most recent which is of course a PLL synthesizer. A lot of those articles in 73 were for the earlier sets, where there was a lot of variation. Once the PLL rigs were reached, there was a fair standardization (though not absolute).

After a certain point, those PLL rigs became difficult to modify because they were designed so they could not easily be changed to cover a different range.

Before you go looking for an article, you really need a CB set at hand, and try to find an article that converts that set.

Sounds sort of like an amplitude modulated, electromagnetically coupled system. I suppose its AM instead of something else because LOTS of power is applied and baud is low- and AM is nice and simple.

I suggest You tell us the price before any thing else.
I personely do not buy an item whose price was kept a secret, until
someone showed an interest, sharp minds know why.

By the way that radio is worth $185

<w0ex@scan.missouri.org> writes:

>Sure. Just look at the total compliance seen in ham radio today.

Actually, most hams and I emphasize MOST hams are law abiding
and attempt to abide by the spirit of the rules if not the letter of
the applicable parts of part 97. Most nets, most contacts between
hams and the like go on with at least some politeness. In fact,
to be honest, if it weren't for DXers & contesters I could go for
weeks and not hear a rules violation. Of course if I go on 75
meters, I'm almost bound to find some of the stronger signals
involved in one form of idiocy or another, and 20 meters has
its equivalent of a set of gathering places for idiots too, however
it is still possible to hear hams move away from each other so
that both can complete contacts, to hear hams in qso allow
another ham break in and move a listening ham off frequency,
whether you're talking about cw or ssb. It would be nice if idiots
and lids could be easily gotten rid of, but ham radio still mostly
functions. Even on 2 meters in places like LA & NYC, it's
possible to hear mostly law abiding hams, despite the
reputations for lawlessness.

Have fun. My personal opinion is that you're wading into a potentially huge pool of legal liability here. Harassment. Purposely and maliciously attempting to interfere with an individual's employment. Not to mention your previous posts on this newsgroup where you have made unproven accusations against Drew's character, publicly accusing him of engaging in criminal activities without the benefit of evidence to back up your claims. Evidence which I have asked you repeatedly to provide. But hey...whatever floats your boat. Since you continually fail to respond to my requests for proof to back up your claims, I'm not going to waste anymore of my time on you. If you wish to continue to trash this newsgroup with your unproven and potentially libelous allegations against Mr. Durigan (much to the chagrin of your fellow USENET users), so be it. Good luck. See ya. Bye.

Not in the least CB. I can call you CB?? I think the relationship has
progressed to 1st name basis. OK?? I am in no way attempting to interfere
with Durigan's employment. I am merely exercising my rights as a US citizen
to express MY opinions along with documented remarks of a baised and racist
nature will be expressing those opinions to Durigan's employer. In no way
will I advocate his terminaion. Based on the station's mission statement of
community involvement and based on the cultural diversity of Hays and
surrounding areas, I think the station, in its best interests knows what they
have in Drew Durigan and his obvious hate for minorities. In this regard it's
not harassment, I am merely pointing out the obvious. Durigan;s employer can
do whatever they want with the information.

> Not to mention
>your
> previous posts on this newsgroup where you have made unproven accusations

As previously conceded, since you are NOT Durigan, I am under no obligation to
provide any information I have concerning him to you. Remember, you've been
previouis asked to identify yourself and you've refused, why should I do any
differently.

But hey...whatever floats
your
> boat. Since you continually fail to respond to my requests for proof to
back
> up your claims, I'm not going to waste anymore of my time on you.

See above. I am not answerable to you and I have not failed to respond to your requests, I have chosen to ignore them.

If you
wish
> to continue to trash this newsgroup with your unproven and potentially libelous
> allegations against Mr. Durigan

Actually they are far from unproven and in no way libelous as there is substantial documented proof on everything Durigan has done and said.

(much to the chagrin of your fellow USENET
> users), so be it.

Just taking lessons from you, master debator of the this and other newsgroups

Good luck. See ya. Bye.

Yep, CB it has been fun. Hopefully you won't catch much flack from Durigan because it was actually a post of your that gave me the idea. In fact, I was something that you posted eslewhere that started the whole thing. Still, I can think of better ways to spend 4 weeks...too warm for skiing, too cold for golf, just so much radio to play. Saw 9 movies, 4 Broadway shows. Flew to Vegas for a weekend..not much fun, too short a stay. Oh well, at least this was a few hours amusement.

Again, CB thanks for the great idea. Will be interesting see Drew twist in the wind at the end of the rope he helped create and you helped weave

Carson Valley Radio Club Sponsors Classes

The Carson Valley Radio Club will be sponsoring a nine-week Technician licensing class beginning Wednesday, March 4th, at the Minden/Tahoe (Douglas County) Airport, located between Minden and Carson City. Registrations will be accepted up to the second class meeting.

The class will be taught by experienced instructors Bob Grissom, KI7GN, Harry Hampton, N7MBO, and Dick Flanagan, W6OLD, and will culminate in a special VE testing session. This will be the fourth consecutive year this dedicated team has taught these successful classes.

The classes will be held every Wednesday evening from 6:30 to 9:30 p.m., at the Sierra Front Interagency Dispatch Center, 2311 Firebrand Road, Minden. All instruction will be free, with students required to provide only the text book, "Now You're Talking," 3rd Edition by ARRL, which will be available for sale at the meetings.

For more information, please contact Dick Flanagan, W6OLD, at (702) 267-4900, via e-mail at w6old@qsl.net, or visit the CVRC Web Site at http://www.qsl.net/w7di/.

Source record: 176947

Teen Ham <teenham@aol.com> wrote:
: Hello,

: Here's the problem: A few days ago I put my Realistic HTX-202 in the car and
: plugged it in the cig lighter, tried to key the mic, and noticed that the "TX
: Bar" didn't move, and I noticed that I wasn't putting out any power! I turned
: the radio off, then turned it back on about 2 hours later, and everything was
: fine. Next Day: I plug the HTX-202 into my 3 amp RadioShack base power
: supply, chat for about 30 mins, then go into standby. About 20 mins later I go
: to key the mic, and again, it won't transmit! So I put aside, and next day try
: it, and still no TX! RX is fine, but it won't transmit!!! If you have any
: ideas, PLEASE email me. I'm only 14, and I put down my last $120 for the HT
: last summer, and really need to get back on the air! :-) Please give me any
: advise! Thanks alot!

Remember to remove the battery pack when it's plugged into the cigarrette
lighter. There have been problems with an overheating zener diode that
is right next to the final output transistor. High SWR can also cause
this radio to have a heart attack. Be very careful with the BNC connector
of this radio. If you twist the antenna too much you will break the little
wire that goes from the center conductor and the PCB and then you will be
in really big trouble.

This class will be free and taught by members of the U of MD ARA.

Location: U of MD, College Park, Computer & Space Sciences, Rm 4400.

Tuesday nights, 7 p.m, starting Tuesday, March 3, 1998.

Talk-in for the class will be on the 145.49 (-600 kHz) repeater,
located in College Park.

We will be using the newest version (Red) of Now You're Talking.
This is an excellent text, available for $19 at Radio Shack and
numerous other locations as well.

PLEASE call or e-mail to register!

We look forward to seeing you there! If you don't make it to the
first class, don't despair - call me if you wish to attend.

Well, well, what do we have here? How come you're not
up on 14313 issuing death threats to AF2Y?

Every time you open your illiterate mouth you give away
your stupidity O'brien! And what is this? A multiple
convicted felon handing out advice?

Cobb County, as all counties in Georgia, does not legislate or
pass legislation. That right, under the Georgia state
constitution, is given to the General Assembly in Atlanta.

The piece of "legislation" you refer to in your stupidity was,
in fact, a family resolution, and it never condemned
homosexuality and it definitely did NOT make homosexuality
illegal. It merely was a non-binding resolution which stated,
in essence, that the gay lifestyle was not compatible with family
type lifestyles in Cobb County. The resolution NEVER had
a legal standing in law. Moreover, the resolution expired
on Dec. 31, 1997, because the Cobb County Commission
did not renew it.

Next time O'brien, get your facts straight, before you shoot
off your mouth.

-------------------

Notice of changes in shipping costs
-----------------------------------

Sorry, But due to pricing concerns, it has become needed to add the cost of
shipping to the costomer, on light items, this will be a nominal fee, like
$5.00. on Heavy Items, it could be an extra $20.00 added to the cost, all
items
are going to be repriced.

(attachment 4):

Question: What is Chuck's 2 Way Radio
Answer: Chuck's 2 Way Radio is a *SMALL* Side business ran by Charles Adkins, N8QXP, a 25 year old, Ham Radio Operator, and Computer Nut. (Not mention Internet freak!)

Qnestion: Well, What do you carry?
Answer: Well, Where do I start? CB's, and Acc's, Antenna's, Car Stereo's and Acc's, Radar Detector's, and a lot of other things too numerous to list here.

Question: How do I get ahold of you?

Answer: The fastest way to reach me is via E-Mail, My E-mail Address is MailTo:Chuck@Chucks2way.com My Web site address is Http://www.chucks2way.com or if you don't wanna send me e-mail, you call me at 1-313-389-7189 and leave a voicemail message 24 hours a day 7 days a week, 365 days a year. and sometimes you might just catch me in the office!

Question: Do you take Master Card, Visa, Or other types of Credit Cards?
Answer: I'd love to, But the cost of getting into Credit Cards is quite expensive, from what I'm told, it costs $500.00 for the software! and $100.00 or more a month just for the service! and PLUS I'd have to mark up
~~~~~~~~~~~~~~~

all my products 7% just to cover the transaction fee! No Thanks, I'll stick to checks and money orders!

Question: Do you ship COD ?
ANSWER: No, I cannot ship COD for the cost of doing that is too great. and I don't feel like losing my pants either! ;-)

Question: Well, What are you're Terms?
ANSWER: Cash, Baby, Cash! No, Seriously. I accept Checks, and/or Money Orders.

QUESTION: If I order something, How long does it take to get it and How do you ship?
ANSWER: First off, It usually takes about a week and a half to get something from me, reasons why? Well, First I have to recieve the check or money order for the order, then if the check is from a out of state bank, it usually takes 5 Business days for the Money order or Check to Clear the Bank, Then I have to order the product from my sources, The the product has to arrive here, Then I visually inspect the product for Any and all damages, then, I Bench test the product to be sure it isn't going to blow up, then I Pack the product back up and Ship it to you via UPS Ground... I never charge the costomer Shipping, I pay it myself... and that usally takes about 3 days to arrive. I do this with ALL orders that come through here.

QUESTION: Do you accept orders from resellers or Dealers?
Answer: Whatever you do with this product after you get it from me is your business! I don't care, Although, I will make it clear, I charge the SAME prices to dealers, as I do end users.

QUESTION: Do you sell those 25-29 Mhz Amps? (or CB radio Amps)
ANSWER: Yes! But! There is no warranty on this kind of equipment at all. and there are no returns on this sort of equipment at all. ALL SALES FINAL!

I understand Melissa's point completely - how I live my life
is the business of myself and those I care about, and is not
subject to debate.

This newsgroup is a perfect example - people obsessing on
irrelevant issues, ignoring what really matters.

If this is the best the Internet can do, we're in *big* trouble.

Not at all- I don't think we are all ready for that level of QRP yet,
but the point is, anyone can -and does- do whatever they wish today
without fear of enforcement consequences. And not just hams. I object to
making our licensing so easily availablethat it becomes essentially
effortless to get a ham license.

> >> The assumption that many will violate stated power limits

>
> >Sure. Just look at the total compliance seen in ham radio today.
>
> Don't be one of those folks who points to a few dozen rotten
> operators and says "See? *All* hams are rotten!"

We aren't just talking about current hams. We are talking about many
non-hams who would -and do- quickly obtain licenses under the 'no-code,
no-test' system. Many of these people are accustomed to flagrant
disregard of rule and convention. What confidence can anyone have that
they will suddenly become model citizens as licensxed hams? I see none
whatever, actually the reverse is more likely given the laxity of
enforcement today.

> We probably have
> 99.9% compliance, but with 700,000+ hams, the 0.1% that are non-
> compliant would amount to 700 operators. Even if there existed

> small percentage of all licensees.

It's a percentage that I don't want see grow to the point that the HF
bands become essentially unusable, which I see as a very real
possibility. I don't know what you can hear in Hawaii, but I sure know
what is available to anyone listening in the Midwest. It gets very

disturbing at times, and in my view constitutes the *real* threat to our allocations, not some obscure dispute over mode efficiencies.

Kelly,

It's a little more complicated than that. Aircraft microphones are
'powered' from the aviation radio. They require a voltage source
(impressed on the mic audio lead) to operate.

Simply building a conversion cable will not work. It will require
modification of the radio (not recommended for an HT unless you're
quite experienced).

> Just because you hear a dozen or so jerks, you shouldn't say
> "the ham bands sound like CB."

A dozen is hardly an accurate observation. There are many more
than that, besides this observation was not solely mine. It was
also made my other, much older, more experienced HAMs.

> how they reacted to you depends upon how you reacted to them.
> We have no way of knowing how you initially came across to them -
> maybe you can ask them to QSY over to here so we can hear their

> like CB, causes me to suspect that you might not have made a very
> good first-impression upon those other fellows in your town.

How I reacted to them? I tried to contribute. I tried to
participate. I was respectful from the start, but they were
appathetic. I talked on a roundtable discussion every night
with a bunch of other HAMs. For the most part, it didn't
matter to them. I occasionally tried to stimulate discussion
on subjects that I was interested in, but they were not
interested. I talked constructively about the very things that
they were talking about, but they chose to be indifferent about
that too. After one of my comments or attempts to say something
interesting, I would hear a reply like: "Well, anyway...."

QSY to where, the next room? I wasn't on the radio, when I got
stares and appathy. I was talking to them directly in the face.

> You are involved in an 90 year old hobby.

Irrelevant. There is a lot of bandwidth and great diversity in
the activities on those bands. The fact that some of our bands
are vulnerable to being sold to the highest bidder is more reason
for us to be respectful of each other and not have conflicts (at
least not major ones).

> Amateur astronomy is a very fascinating and technical hobby, too -
> the TV station still might have reacted negatively had you
> proposed a program devoted to that field.
>
> Informative programming doesn't necessarily equate to high
> viewership, especially with 50+ TV channels available to most
> cable subscribers.

Irrelevent. Completely Irrelevent. The point is, that for all my trouble, all I got were stares. Nobody said "I don't think people will like it," or "The cable company will never let it on the air," or "It's a bad idea, we don't like it." They said nothing, as if just didn't matter.

The Cable company's reaction would also be irrelevent. They are required by law to provide access for a reasonable price. They would have no legal excuse to deny access.

That was probably the actual problem with the club that I was in. They were pretty lean on talk of HAM Radio. It felt like a pure social gathering, which I wasn't interested in. One of the big issues that they made a big deal about was that they needed more members to show up at the Breakfast Meetings in order to get a group rate on the food. I try not to be bitter, but that just gets me mad.

> Of course, I'd like you to learn CW as there's a big, big
> world out there, but it's up to you as you've said.

That's my only problem with the issue of CW. It seems to be expected that each and every HAM learn CW whether they will use it or not. What about Packet, RTTY, ATV, Remote Control, etc.

Thank you for your response. It was constructive and positive. I have been out of touch with other HAMs for a while, but still listen and even talk to people on the radio once in a while when I think I can contribute something of value. Hopefully I can get back into the swing of things soon.

If you use an speaker-mic, this kind of problem may happen (it
happened to me a couple of times).

If you can't TX with regular button, your radio may need to be
repaired.

2906. Re: Best Ham Equipment for CB Operation?

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-28 00:00:00 UTC
From: lar01@sprynet.com
Message-ID: <34f80c75.461928@news.sprynet.com>
Source record: 176969

Hi Jim

Unfortunately, for eveyone, this 'is' the way things have gone. Less and less people have any real regard for the airwaves. Amateur radio used to have a lot of public pride attached to it. Now with cell phones and cb abuse, we can only feel good about ourselves.

Cbers are abusing the system because it has been deregulated because it was impossible to regulate.

I guess there are some cbers who use high power/price equipment because that is their desire much like some amateurs use high power/price equipment. The only difference being we are licenced and they aren't.

One thing, however, you can be thankful for is that cbers are self restricting themselves to 26 to 28 mhz. When the sunspot cycle drops for a few years, what are they going to do.

I think the more we make notice of them the more we separate ourselves from them. The more we argue about their missuse of common sence the more we tend to be see as one of them.

If we, as amateurs, keep within our rules and regulations, the day should come when we will be seen for what we are and they for what they are and I think, hope, the powers that be we help us win.

Larry ve3fxq phylosophy xxx

Have a nice day Jim and continue doing what you believe is right.

> scars. That's okay, Hans - you can leave he Elmering to us - we won't
> ask you to get your feet dirty inviting you to join us.)

Jeff,

I just checked my log for the period from July 1st of last year up to today. In that brief period I find 317 CW contacts which occured in the Novice sub-bands.

Feel free to engage in a civil debate about my ideas, but discontinue your petty personal attacks.

73, Hans, K0HB

...ghetto

Jeffrey KH2PZ scolded me and said:

>I suggest to study the definition of that word.

I did study it, and I used it very deliberately.

"Ghetto - an environ where where individuals or groups of
individuals are forced to reside due to political or
other discrimination."

The US amateur radio regulations establish this ghetto
where Novices and Tech+ licensees are segregated from
mainstream amateur radio. The regulations should be
changed to eliminate the ghetto.

2909. Canada - On Open Spark!

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-28 00:00:00 UTC
From: Mike & Ronica Hall <micronic@mail.kc3ltd.co.uk>
Message-ID: <01bd43db$29524c00$LocalHost@preinstalledcom>
Source record: 177008

As an ex-radio amateur I would welcome some help with information about amateur radio activity in Canada 1910-1913 and 1919-1939.

A relative of mine - William Robert Green emigrated from UK arriving in Canada (via USA 1905) in 1906.

William - living in China Creek, Princeton, British Columbia, - stated in a letter (July 1942) to my grandmother (his cousin) in London, UK:

"I'm an X ham & this is the second war that has stopped me from using a 'ham' transmitter. I started in the old days of open spark wk. in 1910."

Part way through another letter (Oct 1943) he says:

"Signing off until tomorrow W1RG (my old S. Wave Radio Call)."

The ARRL and RAC have kindly taken time to answer some of my questions and I understand that amateurs could chose their own callsigns in the early days. W1RG was obviously William's initials. ARRL confirms it was _not_ a USA callsign.

Has anyone access to records of Canadian amateur radio activity for 1910-1914 and 1919-1939? I understand that some records do exist on microfilm of Canadian Amateur Operators' certificates (1920 - 1935).

Would anyone on this newsgroup have any information about the early days of Amateur Radio in Canada.

Is it even possible that someone remembers working William!

Many thanks,

Mike Hall

I have the following for sale. I'm looking for a one price buys all best offer. Please no request for single items for now. Thank you for your time.
Benny L Dowers

One - ARL (Applied Research Laboratories, Inc.) capacitor, 15 MFD - 600 VDC, AEROVOX PO9J, part # 02104

One - Spargue electrolytic capacitor, 80MFD.350 VDC, 40MFD.350 VDC, twist-lock Lytic, TLV-2634

Two - Sprague electrolytic capacitor, 20-450 D.C. +3, 20-450 D.C. +5, Com. neg. +1, Octal-Base Lytic, PE-2755

Two - Sprague electrolytic capacitor, 20 UF - 450 VDC, Atom Lytic, TVA - 1709

One - Sprague electrolytic capacitor, 8 MF - 150 WVDC. Atom Lytic, TVA - 1405

One - Mallory electrolytic capacitor, 20 MFD - 450 VDC, 15 MFD - 350 VDC, 15 MFD - 350 VDC, type FP, Fp343.4

One - G.E. Company pyrand capacitor, 56 uf - 250 VDC DC, 100 amps, 21f483

Two - Tracor Westronics CA-614-2075 Capacitor, Spargue + - 10% 200DC

One - Southern Electronics Mylar capacitor, 1 MFD 0 + - 10% 50VDC, 03357-1

One - Southern Electronics Poly capacitor, .1UFD+ - 10% 100VDC, 02831-0.1

One - Sprague electrolytic capacitor, .5 MF+ - 10%, 600 VDC, 6TM-P5

One - Sprague electrolytic capacitor, 500uf- 50VDC, Atom Lytic, TVA-1315

One - Sprague electolytic capacitor, 20 MF, 450 VDC, Atom Lytic, TVA - 1709

One - Sprague electolytic capacitor, 500MF - 50VDC, Atom Lytic, TVA -1315

One - Sprague electolytic capacitor, 20 UF - 450 VDC, Atom Lytic, TVA - 1709

One - Sprague electolytic capacitor, .1+- 10% - 600 DC, 220P, 6PS-P10

One - Nippon Chemi-Con, 16V - 220 uF, CEO2W, 67(1)

One - Nichicon, 4700uF - 35V

One - Nippon Chemi-Con, 50uF - 200V , 10681BE

One - Cinema CE529E, 235+-1/10%6448

Four - Cornell Dubilier, CDE, Beaver electrolytic capacitor, 4 MFD - 600 WVDC, type BR4-600

One - Cornell Dubilier, CDE, Beaver electrolytic capacitor, 20 MFD - 250 WVDC, type 20-250

One Potter & Brumfield Relay. type 167, KA11DY, DPDT 5A, 24V DC

One Potter & Brumfield Relay. type 176 , KA14AY , 3PDT 5A , 115V AC

One Potter & Brumfield Relay. type 177 , KA14AY , 3PDT 5A , 240V AC

Three Potter & Brumfield Relays. type 159 , KAllAY , DPDT 5A , 240V AC

One Potter & Brumfield Relay. type 158 , KAllAY DPDT 5A , 120V AC

One Potter & Brumfield Relay. type 415185 , 3PDT , 24V DC

One Potter & Brumfield Relay. type 4211 , KAllAY , 24V DC

One Potter & Brumfield Relay. type 220B1 , 115V AC

Ohmite Vitreous Enameled Resistors

(the following are about 1.25 inches in diameter by 12 inches long. they are made of a ceramic type material. some have a movable metal ring . adjustable ohms ???. If any body knows, e-mail me.)

Two - fixed resistor, stock # 0901, 225 watts , 25 ohms

One - DIVIDOHM resistor, stock # 1360B , 225 watts , 250 ohms

Seven - DIVIDOHM resistor , stock # 1357 , 225 watts , 10 ohms

Two - DIVIDOHM resistor , stock # 1360B , 225 watts , 250 ohms

(the following are square tube shaped at .5 by 6 inches long. made of a resin or ceramic type material . no markings of brand name or watts-ohms)

Four - Marked S over a T. 126-175H -Q , 6J (no other markings)

(the following are smaller 2 inches long ceramic)

Two - OHMITE - DIVIDOHM resistor , stock # 0368 , 25 watts , 100 ohms

One - Memcor , FRL20 - 100 K ohms

One - Memcor , ARE25 - 3 K ohms

One - Tru - OHM , AR25 - 100 K ohms

2923. *Please help! HTX-202 No TX*

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-28 00:00:00 UTC
From: teenham@aol.com
Message-ID: <19980228030500.WAA24470@ladder02.news.aol.com>
Source record: 177022

Hello,

Here's the problem: A few days ago I put my Realistic HTX-202 in the car and plugged it in the cig lighter, tried to key the mic, and noticed that the "TX Bar" didn't move, and I noticed that I wasn't putting out any power! I turned the radio off, then turned it back on about 2 hours later, and everything was fine. Next Day: I plug the HTX-202 into my 3 amp RadioShack base power supply, chat for about 30 mins, then go into standby. About 20 mins later I go to key the mic, and again, it won't transmit! So I put aside, and next day try it, and still no TX! RX is fine, but it won't transmit!!! If you have any ideas, PLEASE email me. I'm only 14, and I put down my last $120 for the HT last summer, and really need to get back on the air! :-) Please give me any advise! Thanks alot!

First, my condolences to you, Hans, if you're reading this NG via the listserver at ucsd.edu; all the day's articles arriving in one single email makes it very difficult to respond!

Hans wrote:

>...ghetto
>
>Jeffrey KH2PZ scolded me and said:
>>I suggest to study the definition of that word.

And just as I hoped when I wrote the above:

>I did study it, and I used it very deliberately.
>
>"Ghetto - an environ where where individuals or groups of
> individuals are forced to reside due to political or
> other discrimination."

I imagine it was difficult for you to type that definition, Hans, for as you very well know, no one is "forcing" the Novices to remain at that grade. The idea of Incentive Licensing is to give Novices a a taste (and *just* as taste) of HF, and at the same time, provide rewards (more privileges) for upgrading.

>The US amateur radio regulations establish this ghetto
>where Novices and Tech+ licensees are segregated from
>mainstream amateur radio. The regulations should be
>changed to eliminate the ghetto.

Well then, let's go all the way: Give the Novices access to the Extra Class segments of all the bands. =:o

I thought we already cleared up this misunderstanding you seem to have - that upper-grade licensees can be found can be found in the Novice segments, keeping the Novices company and and helping them build their code speed, eliminates your notion that Novices are "segregated from mainstream amateur radio."

Enjoy the weekend,
Jeff KH2PZ

: Go fuck yourself, you hatemonger asshole bigot!
^^

Melissa:

My, what a charming response!

: >And getting "married" to another man or whatever.
:
: No fuckwit, I'm married to a woman, legally and for the past 13
: years, and whether shitwads who don't deserve to live, like you,
: like it or not!

Hmmm. Apparently, womyn married to womyn (note the politiKally-
KorreKt spelling!) aren't required to observe the rules of common
courtesy -- at least not in Usenet, anyway! Oh, well, I guess your
"cause" doesn't require anything as conventional as credibility, or
personal integrity!

: Now quit posting this off topic hate crap!

: Of course that's just my opinion.
: Anyone who doesn't agree with me is clearly wrong. :-)
:

I'm sure you truly believe that!

: - Melissa http://www.amnix.com/~melissa/links.htm
:
: "Men rarely (if ever) manage to dream up a god superior to
: themselves. Most gods have the manners and morals of a spoiled
: child." - Robert A. Heinlein, from the novel Time Enough For Love

Hmmm...and your "god" has the manners and morals of what? A
drunken sailor, perhaps?

: Fed up with xtian hate religion? In my religion homosexuality is not a sin
: and gay marriages are blessed! http://www.amnix.com/~melissa/fedup.htm

Just what is your "religion?" "Melissism?" BTW, I've never heard of
"xtian hate religion." I'm a Christian, and I don't "hate" anyone! I feel

sorry for these poor, hate-filled "xtians" of yours!

: My posting to Usenet does not imply permission, or a request, to email me,
: though kind supportive comments are always welcome. (To email me, remove
: the spam proofing character on both sides of the @ in my address.)
: Hostile, harassing, religious harassment and/or abusive email may be posted
: and result in complaints to your provider.

And, as I found out, any opinion, no matter how politely given, will, if not
in agreement with Melissa's worldview, will be considered "hostile, harassing,
and/or abusive! Don't believe me? OK, see for yourself!

>Yeah. So did FCC enforcement. You think that works well today too?

So power limits should be proportional to FCC enforcement?

>> The assumption that many will violate stated power limits
>> is without justification.

>Sure. Just look at the total compliance seen in ham radio today.

Don't be one of those folks who points to a few dozen rotten operators and says "See? *All* hams are rotten!" We probably have 99.9% compliance, but with 700,000+ hams, the 0.1% that are non-compliant would amount to 700 operators. Even if there existed several thousand rotten operators that would still amount to a small percentage of all licensees.

Enjoy the weekend!

I can't believe you would blame Burt for "outing" you. Your 500 character tag line went right to your page and all it did was scream homosexual. If your gay,that's your bag. Go live that lifestyle and keep it to yourself.Personally,I find the lifestyle disgusting. You opened this can of worms with your "Act up" web page. My advice to you is to take the words of the great Andrew "Dice" Clay and "Get back in the Closet". But hey.I liked your ccr midi file so much I put it on my webpage. Later Jim

Melissa is very much alike most homosexuals. They have a sickness,a disgusting,revulsive desire for sex with their own gender. This is NOT normal,it is ABNORMAL. You are not OK,you are SICK. You can post on the Internet all you want but you will still be a screwed up individual with a deviant,perverted sex life. If you seek acceptance for this freakish and disgusting behaviour seek it from your parents and other family members,not complete strangers in the newsgroups. We passed legislation here in Cobb County Georgia against your lifestyle and I still back that legislation. You can copulate with an animal if you wish just keep the trash out of this group. Radical homos on this group will be cause for me to come out of "retirement". Other than that,have a nice day.

Dear Fellow Amateurs,
I was directed to the rec.radio.cb newsgroup concerning a Henry amplifier. While there, I came upon this exchange:

~~~~~~~~~~~~~~~~~~~~
mrlamb@kc.net posted:
"What are the advantages/disadvantages to using an HF amateur rig for 11 meters. If an HF rig is truly the way to go, then which rig would be the best to use. Thanks!"

hanis@swbell.net replied:
"The AM mode on many modern ham rigs leaves alot to be desired. I could get pretty good audio out of my old Yaesu 757GXII with a D-104 mic using the speach compressor. It had better AM tranmit than the FT-1000MP I am using now. The 1000 only has a RF processor that works on side-band only. No audio comperssor for the mic input. You will also want to run the carrier on thes radios at about 25 watts on AM to leave head room for the modulation.
Steve."
~~~~~~~~~~~~~~~~~~~~

Now I'll be the first to admit that I have led a sheltered life, but I'm still in shock, if only because this exchange and several others like it are posted so openly. In addition, I still think of my own Yaesu FT-757GXII as my "new" rig, while I sigh, gaze longingly at new FT-1000s, and imagine winning the lottery someday.
Does this kind of thing go on all the time? Do any of these guys ever get called on the carpet for this?
I guess I'm a little jealous, a little surprised, and a whole lot mad.
Thanks to all 600,000 of you, who worked hard for your licenses, CW-lovers and CW-haters alike, for letting me vent into your ears.

Forget about anything above 480 MHz if that is what you are looking to
do...Mine is down in my car
and I believe 475 is as high as it goes.

Charlie,there is 2 controls inside to turn power down .One is for AM
power,which is marked and the other is for sideband power,which is marked
ALC.There is a site to get into that tells you about this,but I can`t think
of it right now.I own a 2510,very nice radio.If you need to know any other
information,let me know.ROB

But as the term applies to ham radio, Hans, the definition needs
to be changed just a wee bit. First of all, nobody is 'forced' to
to be the holder of a Novice or Tech+ ticket - nobody but Squiggy,
anyway.....

So as it applies to ham radio, maybe the definition should read:

'Ghetto - an environ where Novices and Tech+ licensees are
allowed to reside because they have chosen not to do what is
required to reside elsewhere.'

I don't think more HF operators are going to fix any of our perceived
problems, Hans. I think we need more good operators - maybe we
should replace the testing proceedure with an apprentice program.

If you get time to tune up out of the Novice band, listen to the current
KH9 operation - that's a prime example of what happens when you
cut inexperienced operators loose on HF. Anyway, keep working
those Novices on CW - maybe you will be personally responsible for
one or two of them getting out of the ghetto.

2943. Re: Techniques for learning Morse code

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-01 00:00:00 UTC
From: thehamguy@aol.com
Message-ID: <19980301152301.KAA12617@ladder02.news.aol.com>
Source record: 176893

Re: Best Morse code learning tecniques

When I got started, I used the Gordon West tapes. This method proved effective for me and I passed my 5WPM test with flying colors. However, I did find a disadvantage of this method in that I tended to "memorize" the tapes as I got further along in the program. Instead of listening for the letters, I would instinctively write them down beforehand, since I knew what was coming next on the tape.

2944. Re: Drew and CB Dimbulb not the same??

Steve, I understand your frustration, but why don't you simply ignore this character? After all, he's nothing more than an anonymous poster on the Internet. His enjoyment and incentive to continue posting is coming from the fact that he enjoys getting you all hot under the collar like this. He's not worth the effort of a long, protracted battle. Just ignore him and watch how quickly he moves onto something else.

Hope you are enjoying your vacation time. I am envious; how did you manage to get four weeks away from the office? Hope you caught the opening on 10m yesterday.

2945. Re: TapeTenna?

Check in the back of some of the issues of QST from 96 - 98. I just recently saw the ad, but can't find it!

The TapeTenna was copper foil that could be put on a window, in an attic, etc. I tried using burglar alarm foil, which is lead, antimony, and silver. It does a fairly good job, and sells for about 4.99/roll at Radio Shack. It has an adhesive side and sticks to everything (watch ur fingers!)

73's

Paul
N3PEE

"But for every one of the liberated prisoners, the day comes when, looking back on his camp experiences, he can no longer understand how he endured it all. As the day of his liberation eventually came, when everything seemed to him like a beautiful dream, so also comes the day comes when all his camp experiences seem to him nothing but a nightmare.

"The crowning experience of all, for the homecoming man, is the wonderful feeling that, after all he has suffered, there is nothing he need fear any more -- except his God."
-- Victor Frankl

2946. What's happening with ham radio in YOUR area?

$185? Your hopes are a bit high. Lets see, you can go to Radio Shack and
buy their version of a Sangean receiver for around that price...on sale
of course. Happy shopping.

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated February 15, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

MARCH 1998

Mar 8 (Sun) - Waukesha, WI. SEWFARS Swapfest. Info: Mary J. Adams, KB9IFF, tel. 414-358-1003. E-mail: mjadams@execpc.com.

March 15 (Sun): Sterling-Rock Falls ARS, Sterling, IL info: Lloyd Sherman, KB9APW, PO Box 521, Sterling, IL 61081-0521. tel. 815-336-2434, E-mail: lsherman@essexl.com

March 22 (Sun): Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. All indoors. Admission $5 at gate, free parking. Setup at 6 AM, doors open at 8 AM. Info: Dave Gudewicz, KB9KDA, 5 Brigantine Lane, Grayslake, IL 60030. tel. 847-223-1088. (Small fest, but usually interesting - AJ9S.)

APRIL 1998

April 5 (Sun): Madison, WI. Madison Area Repeater Association. Info: Jeremy Charles, N9VHT, PO Box 8890, Madison, WI 53708-8890. tel. 608-245-8890. http://www.cs.wisc.edu/~jeremyc/mara/swapfest/

April 19 (Sun) : Stickney, IL. Dupage Amateur Radio Club, Hawthone Race Course. Hours 8 AM - 2 PM. Setup 6 AM. Info Ed Weinstein, WD9AYR. 7511 Walnut Ave, Woodridge Ill 60517 (630) 985-9256 or check the DARC homepage at: http://homepage.interaccess.com/~geirh/ Talk in 145.250. VE testing at 9 AM. Hourly door prizes. All indoor space reserved with a special table pricing offer that ends March 1st. Tickets: $4 in advance, $5 at the gate. Tailgating, weather permitting. Outdoor flea market spaces free.

MAY 1998

May 2 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, For Information Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

May 3 (Sun), Sandwich, IL - Kishwaukee Amateur Radio Club Hamfest, Sandwich Fairgrounds. Admission $6. Ends at 2 PM. Talk-in 146.73 MHz. Info: Bob Yurs W9ICU, phone 815-895-3219, email: N9ZNA@AOL.COM. see http://tbcnet.com/~jleonard/hamfest.htm (Nice mid-sized ham-fest out in country. Lots of tailgating. Few commercial exhibitors. Always a good time. Fairly good restroom facil-ities - AJ9S).

May 15 - 17 (Fri - Sun), Dayton, OH - Dayton HamVention

JUNE 1998

Jun 7 (Sun), Princeton, IL - Starved Rock RC. info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341. tel. 815-795-2201 (Usually an excellent hamfest. Unlimited space outdoor flea market, some indoor space, though few big name commercial vendors. Crude restroom facilities. - AJ9S)

Jun 14 (Sun), Wheaton, IL - Six Meter Club of Chicago. info: Joseph Gutwein, WA9RIJ, 7109 Blackburn Ave., Downers Grove, IL 60516-3925. tel. 630-963-4922

JULY 1998

Jul 12 (Sun), Peotone, IL. Kankakee Area Radio Society. Will County fairgrounds. info: Don Kerouac, K9NR, 6311 East Flora St., Kankakee, IL 60901. tel. 815-939-7548, E-mail: k9nr@juno.com.

Jul 19 (Sun), Sugar Grove, IL. Fox River Radio League. Waubonsee Community College. For tables, tickets, and information: contact N9UZC James E. Von Olnhausen, n9uzc@amsat.org, (630)-879-3042, FRRL, Box 673, Batavia, IL 60510-0673. (good, small to midsized hamfest. Modern rest-room facilities. - AJ9S)

AUGUST 1998

Aug 2 (Sun), Peotone, IL. Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 23 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 tel. 708-944-0500. E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/ (fairly good, small to mid sized hamfest - AJ9S).

SEPTEMBER 1998

Sep 19, 20 (Sat & Sun), Peoria, IL. Peoria Area ARC. info: Jim Williams, N9HHU, Box 3508, Peoria, IL 61612-3508. tel. 309-692-3378. Fax: 309-698-8643. E-mail: jimeoc@worldnet.att.net, http://www.w9uvi.org

Sept 26, 27 (Sat & Sun), Grayslake, IL Chicago FM Club. Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127 North Monterey Ave., Norridge, IL 60656-3245. tel. 708-457-0966 (the biggest and best hamfest in northern IL - AJ9S)

OCTOBER 1998

NOVEMBER 1998

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.gicancomputershow.com

Closed Circuit Advisory

The following is a closed circuit advisory. Just a quick reminder that the address for the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1070 for release on Friday, February 13th, 1998 to follow.

<*>

The following is a QST

The Internet vs ham radio & taxi cabs vs 10 meters. These stories and more on Newsline report number 1070 coming your way right now.

<*>

Internet vs Ham Radio

Is the Internet hurting ham radio? Yes, according to information contained in the December 1997 issue of the IARU Region News. The publication notes that Amateur Radio growth has more or less stagnated in developed countries such as the United States, the England and Japan. It says that the only areas of explosive growth are in the less developed nations that have little or no public access to the Internet.

Recognizing this, the IARU has formed what it calls it's Amateur Radio Outlook Committee. Its purpose is to review the impact of changing technology and the Internet on Amateur Radio.

Who will serve on this committee or what it can do to stem the tide of hams away from their radios and onto the world wide web is very much an unknown.

(Via IARU)

<*>

ARRL supports APRS compromise

The American Radio Relay Leagues Board of Directors has endorsed what's being called the APRS QSY Activity. This, as a compromise with manned ham radio space activities to share frequencies in the two meter band to minimize interference between APRS and communication between terrestrial ham stations and manned spacecraft. The League has pledged a donation of up to $500 to support the APRS QSY initiatives.

(Via ARRL)

<*>

Successful ARRL petition to NTIA

The American Radio Relay League has successfully petitioned the National Telecommunications and Information Administration in hope of gaining that agency's support for a new ham band at 160 to 190 kilohertz. The NTIA says it has no objections to United States radio amateurs being given access to this very low frequency band and will support its creation.

(Via ARRL)

<*>

NAB declares war on broadcast pirates

Word that the Radio Board of Directors of the National Association of Broadcasters has approved a resolution that calls on the government to act to remove all unlicensed broadcasters from the airwaves.

The resolution says that the Radio Board is concerned about the continued proliferation of unlicensed, illegal pirate radio stations throughout the country. The Board goes on to say that these unlicensed broadcast facilities undermine the Communications Act of 1934 and that they often cause interference to broadcast and other services including air navigation.

The Radio Board says that it is happy with the FCC and Department of Justice on their enforcement efforts so far, but it also says that a lot more needs to be done. NAB wants a special task force created in the Department of Justice. The NAB Radio Board says that it is ready to support such a government effort in the hope that it will "eliminate unlicensed radio broadcast stations in the United States."

<*>

NY taxi war

Between 1500 and 2000 of the 11,800 taxis in New York City have modified CB radios many of which are operating in the 10 meter ham band. So says Gerry Smith, W6TER, writing in a recent edition of the Hudson Division Loop electronic newsletter.

According to Smith, the primary reason that cabs like the modified radios is that the FCC allocated 40 CB channels are crowded. The result is that many of the modified "taxi channels" fall in the low end of our 10 meter amateur band.

At its recent meeting, the ARRL's Board of Directors acknowledge the problem and the actions by the FCC and the New York City Taxi and Limousine Commission combat it. But the Board wants the agencies to do even more. The ARRL leadership is urging the confiscation of equipment and fines to drivers who fail to comply by removing any and all illegal transmitters from New York City cabs.

Smith has an idea of his own on how to chase the cabbies off the ham bands. It involves using the Morse code. That part next week.

(Via Hudson Division Loop, ARRL BoD Meeting report)

<*>

Magosci predicts repeater downslide

Ten meters is not the only band with problems in the Big Apple. The co-founder of one of the nations largest repeater clubs says that the world of FM is in for some rough times. Alex Magosci, W2OV, who is one of the driving forces behind New York's Metroplex Amateur Communications Association says that he sees the problems of overcrowding and malicious interference leading to a privatizing more and more repeaters:

"Unfortunately I see them getting closed up electronically. That is the only real solution to solving jammer and trouble maker problems. And so I see a lot of systems that are probably going to go private. And either go private electronically or go closed all together. Or both, a combination of both. And fancy systems, one step beyond even digital PL." Magosci

Magosci says it does not have to be this way, but only the FCC can really end the problems that are causing repeater owners to close their doors to all but the select few:

"When I got my license I was afraid of the FCC. So boy, I'd be the last person in the world to make a mistake on the air. Transmit off frequency or something. Double check, triple check everything before you push the transmit button.

But today I see that attitude is not with your average person that joins ham radio. They don't know who the FCC is. We are the 25th priority with them. And until we get a good scare into us we're not going to do anything better. We are going to get sloppier and do it worse." Magosci

Magosci says that tradition tends to guide longtime hams along the right path. He says however that newcomers do not have that guidance and without FCC support things will not get much better.

File comments to the FCC by e-mail

You can now file comments to the FCC by electronic mail. The Commission has instituted a form on its website where you need only fill in your views and affix an electronic signature. After that you can save a copy as an ASCII text file before e-mailing it back. The form and full instructions are available at:

www.fcc.gov/e-mail/email.html

(Via FCC release)

<*>

Strange broadcast

A strange case of a mystery signal. Several hams report via the Internet remailers the existence of an unidentified AM broadcast band groundwave signal on 755 kHz. Most hearing it are in or near Minneapolis, Minnesota, but several others report hearing the signal as far away as Albany, New York.

One ham using a Sony 2010 multiband portable describes it as carrier only with no modulation and heavy QSB. Several people think it might be a leaky carrier current system in the Mid-West, but at air time no identification has been made.

Direction finding on 96.9 MHZ leads to Qualcomm Stadium

Direction finding measurements performed by one of San Diego's Chief Engineers has uncovered a 96.9 MHZ unlicensed operation at San Diego's Qualcomm Stadium. That's the site of the recent 1998 Super Bowl. It's also where he found a translator station that is rebroadcasting KPBS FM with a service radius of about 3 to 4 miles. KPBS has not given retransmission consent. An investigation is reportedly underway.

(Via CGC Communicator)

<*>

Micro deejay back

Also microbroadcaster DeeJay Schmeejay of Subterradio fame is apparently back on the air in the Pacific Northwest. He has been heard intermittently on 104.1 MHZ. This is a frequency also used by Reed College's station KRRC. A similar signal, some suspect from the same "micro-broadcaster, was intermittently heard at 99.1 MHZ, sandwiched as a second adjacent between perennial Country rivals 98.7 KUPL and 99.5 KWJJ. Needless to say, their respective station managers were not amused.

(Via Portland SBE News)

<*>

Kids Day Event

If you missed the Boring Amateur Radio Club sponsored Kids Day Operating Event on January 3rd, you will get another chance to take part on June 20th.

What is Kids Day? It's a special event intended to encourage activity by younger people using Amateur Radio. The goal is give unlicensed young people some hands-on experience on-the-air, so they might develop an interest in pursuing a license in the future. It is also intended to give hams a chance to share their station with their children.

All participants are eligible to receive a colorful certificate.

For more information please send an SASE to the:

Boring Amateur Radio Club
P.O.Box 1357
Boring, Oregon
97009

or visit their website at:

www.jzap.com/k7rat

<*>

SE VHF Tech Conference

The second annual Southeastern VHF Society Technical Conference will be held on Friday and Saturday, April 3rd and 4th in Atlanta, Georgia. Sponsors say that the date and location of the inaugural Conference in 1997 proved to be so popular with attendees that they have selected the same weekend and location for 1998. That venue is the Atlanta Marriott Northwest located between Atlanta and Marietta.

(Via press release)

<*>

Laser Propulsion

Launching rockets by laser beam may sound like science fiction but a new scientific discovery may make it into reality. This, after a recent test conducted at New Mexico's White Sands Missile Range. There, aerospace researchers were able to launch a laser propelled vehicle some fifty feet into the air.

According to the researchers working this project the success of their test shows that laser propulsion may eventually become a viable method of launching payloads. They say that once developed, laser propulsion will be far more economical than solid or liquid fuel rockets.

And who knows. A ham radio satellite could conceivably be among the first experimental payloads shot into space on a light beam in the next century.

<*>

Married with Ham Radio

And finally, the story of very special newlywed ham radio couple. On Saturday, January 10th, Erin Burck, KD4YLR and Don LaFreniere, VA3DJL, were married in East Lansing, Michigan.

The two first met at the Dayton Hamvention where Don was a speaker at Carole Perry's annual Youth Forum and Erin was in the audience.

"I went to Dayton with my family and we went to the Youth Forum that Carole Perry does and Don was one of the speakers. And while he was speaking some of the references he made to the club that he belonged to and to other things, I realized that he was from right around our area and as I listened more closely I recognized his accent and I realized I had actually talked to him." KD4YLR

They later ran into one another on the air and arranged to meet in person at one of the South-East Michigan Swapfests. After that they began dating and conversing on their own secret two meter frequencies.

"We had many interesting conversations on the air. We had a lot of people from both sides of the border who would love to tune in to us and tease us at appropriate times. Yea, it was an on the air soap opera." KD4YLR

Eventually they decided that they wanted to spend the rest of their lives with one another.

"When Don was in 12th grade and I was in 11th grade we went to his prom together. That was a lot of fun. And a year after that we both graduated. That is because they have a 13th year of high school in Ontario. In case that doesn't make sense to you. We both graduated and we came here. I'm a student at Michigan State and he is going to Lancing Community College. And we got married." KD4YLR

Ham radio can be many things to many people, but for Erin and Don its was the path to romance.

Closed Circuit Advisory

The following advisory is not for transmission over Amateur Radio. This is just a reminder that the address for the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California 91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1072 for release on Friday, February 27th, 1998 to

follow.

<*>

The following is a QST

An ARRL Director forms a private legal association to fight problems on the air, radio site owners target the 70 centimeter ham band in Australia and harsh words for the government of Canada form its ham radio community. These stories and much more on Newsline report number 1072 coming your way right now.

<*>

Ham Radio Legal Service formed

New hope for hams and radio clubs plagued by malicious interference and harassment from others who use foul language on the air. An ARRL Director is forming a new legal service aimed at combating this growing problem. But its not an ARRL project.

Joe Falcone, N8TI listened to amateur radio and doesn't like what he hears.

"Apparently certain people believe that they can say whatever they want over Amateur Radio (that is injurious to others). The problem is that the average ham doesn't have resources to start a law suit that's going to cost $20,000 to $30,000." Falcone

So Falcone, Director of the ARRL's Great Lakes Division, says he will form a nonprofit organization called the Amateur Radio Legal Aid Association. Its purpose: to provide support for amateurs threatened by other hams who use amateur radio to commit the offenses.

Falcone, speaking with RAIN's Hap Holly, KC9RP, says the association will tackle what many hams have long considered a major problem, and that's the failure by local, state and federal law enforcement agencies to act on complaints involving amateur radio.

"I actually have heard of death threats, threats of arson and when I would talk to (the affected) people.

I was in shock -- would ask 'have you gone to the police?' The individuals would say: '...yes, we have gone to the police, but the police won't act on it and the FBI won't act on it. The reason (that law enforcement gives) is if a person a 1,000 miles away -- or 2,000 miles away makes a threat over Amateur Radio, the police and the FBI don't seem to take it seriously.'

This got me extremely upset and I asked myself: 'well, what would I do if somebody did this to me?'" Falcone

The Association will have no connection to the ARRL. Falcone says it will seek donations of time from lawyers and law students, as well as donations from the public. The group may eventually be able to help hams who are victims of radio-borne offenses to take legal action on their own:

"If such lawsuits were brought against these individuals (who harass others on the air), then this, in and of itself would stop this type of activity. The reason is that when someone gets hit with a lawsuit in a federal or state court, and they have to drain their savings to defend it, they are not going to go on doing that (activity). And of coarse, if they disobey a civil injunction, they can be thrown in jail." Falcone

Falcone says the association will conduct research to help hams assess legal options available to them. Ultimately, he hopes the group might even be able to provide financial aid to help bring clear cases of injustice involving amateur radio into the courtroom.

You can hear the complete interview with ARRL Director Joe Falcone, N8TI and learn more of his plans by calling the RAIN Report. That's the new name for the old RAIN Dial-Up and is still at area code (847) 827-RAIN.

(Via Newsline, RAIN)

<*>

RAIN change

By the way, the reports producer Hap Holly, KC9RP has a new RealAudio web address at:

www.rainreport.com

The RAIN Report still updates Fridays.

Again the phone number is area code (847) 827-RAIN. In simple numbers that's (847) 827-7246.

(Via RAIN)

<*>

NY Taxi

Is it legal to operate a ham radio station on top of an unlicensed station that's bootlegging on a ham band? And, is it breaking any FCC rule to reek havoc on a bootlegger that's using the amateur spectrum for an obvious commercial purpose? Those are the questions that have arisen in New York City between hams who want to rid ten meters of illegal taxi cab dispatch services, but who are divided on how to do it.

Three lines of reason have developed. The first says that you should ignore the existence of the bootlegger. As such, these hams believe that you can operate any mode to which your license permits in the spectrum -- and do so right on top of a bootlegging station

Another faction says -- wait a minute. Even though the bootleg taxi dispatch and mobile stations have no legal right to be in a ham band, to operate on top of them is still an act of wanton malicious interference to them.

Finally there are those who agree that the taxi operators are breaking the law by using 10 meters, but they also say that for hams to do anything that interferes with their communications is to violate the cabbies civil rights. They believe that only the federal government has the power to move them off of 10 meters but the content of their communications and their ability to communicate is constitutionally protected.

Which if any of these three views is the right one? That's what we asked the FCC. They say they have turned it over to one of their lawyers to research. The answer -- hopefully -- next week.

(Via Newsline)

<*>

Wisconsin anti mobile law dies in assembly

Some good news for hams living in Wisconsin. The threat of a new state law that would ban the mobile in motion use of two way radio equipment has ended. At least it has ended for now.

Smoke Signals newsletter editor Jim Romelfanger, K9ZZ, tells Newsline that Wisconsin Assembly Bill 754 is basically a dead issue. Romelfanger says that he spoke with one of its sponsors and learned that it has not even had a hearing let alone be reported out of committee. Jim says that with only a few days left to this years Wisconsin Assembly session, that there is no way for AB 754 to become Wisconsin state law.

AB 754 was primarily aimed at curbing automobile accidents due to inattentive cellular telephone users. Unfortunately for hams, the wording of the measure encompassed all forms of mobile radio communications. Its backers are expected to try to pass it again in the next Assembly session. Meantime hams now have a chance to build a solid opposition to it or at least demand an exemption for licensed radio amateurs.

(Via K9ZZ)

<*>

Hams help in West Coast Flooding

Amateur Radio has been very active in the San Francisco area, assisting emergency officials in coping with the disastrous effects of heavy rains in recent days. So says ARRL San Francisco Section Manager John Wallack, W6TLK.

Wallack reports that floods and mudslides have closed many roads and isolated smaller communities, especially along the coast. Hams have been stationed in the affected areas at shelters and Emergency Operations Centers since the disaster started on February 3rd. In Mendocino, Lake, Humboldt and Marin counties hams have also been active in supporting emergency activities.

(Via ARRL)

<*>

Oregon Ice

Hams in Oregon also were called into action in mid-January. This, when an ice storm knocked out power and telephone service in much of the Portland area.

There, ARES members were called in to help handle communication tasks for local emergency agencies. The hams' ice storm activities garnered great publicity for the hobby in an article in the January 23, edition of the newspaper the Oregonian. The article quotes Oregon City Fire Chief Jim Davis as a strong advocate of the Amateur Radio Emergency Service.

(Via ARRL)

<*>

VK spectrum hunters target 70 cm

The 70 centimeter ham band in Australia is under attack from that nations Radio Site Owners and Users Association.

In Australia, the Radio Site Owners and Users Association is a lobbying body of about two dozen organizations which run the majority of VK land mobile radio sites. According to Australia's Q News, the association is urging its members to campaign for the reallocation of the 380 to 400 MHZ and 420 to 450 MHZ bands. They want more commercialized use of this spectrum. Much of which is currently one of the most popular ham bands.

The Association warns its members that they may have to go into what amount to a war with Amateur Radio to get the 70 centimeter band away from Australian hams. A recent Association newsletter warns members that Australian amateurs maintain very effective lobbying. They recently gained a reduction in fees shortly after new license fee structures were announced.

On the hams side, the Wireless Institute of Australia is already using its lobbying ability to protect the 70 centimeter Amateur allocation. It's Government Liaison Team has already been mobilized to gain the support from the Australian Department of Defense in hope of fending off this imminent threat to the 70 centimeter band.

Australia's Department of Defense is the primary licensee of 420 to 450 MHZ band and is friendly to ham radio.

(Via Q News, others)

<*>

RAC Board "Appalled" at IC behavior

Meantime on this side of the Pacific, Radio Amateurs Canada has launched a verbal attack against Canadian telecommunications regulators. This, after the government backs away from a plan to turn administration of the Canadian Amateur Radio Service over to the national society.

We have already seen it happen in the United States. Privatization of certain administrative functions in Amateur Radio like the volunteer exam program and license tests formerly run by the FCC.

Canadian radio regulators also consider handing over some administrative duties, but a lot of ill will has been generated in the process. Industry Canada -- the old Canadian Department of Communications with the government wanted a panel created with the group Radio Amateurs Canada. It would be like the FCC working with the ARRL.

Well, after more than four years in the planning, government officials called off the delegation. A few months later, still no explanation as to why. And now a strongly worded protest from Radio Amateurs Canada.

The President of Radio Amateurs Canada, Farrell Hopwood, VE7RD, tells the Canadian Communications Minister that his agency is unprofessional and shortsighted in canceling the working group.

RAC meantime, seems to carry very little equity with telecommunications regulators who're now taking an independent survey to Canadian radio amateurs to determine the future administration of the service.

There is no active role now for RAC. Missing is why the RAC has lost its place with Canadian communications officials. But as far as RAC is concerned, the moves completely undercut trust and has hurt efforts at creating a privately regulated Canadian Amateur Radio Service.

(Via Radio Amateurs Canada, others)

<*>

South Africa CEPT

South African hams will soon be able to operate in CEPT signatory countries without the need of acquiring a guest license. This, according to SATRA, the South African Telecommunications Regulatory Authority which says that it has received Confirmation from the European Radio Communication Office, that South Africa has been accepted as a signatory to and participant in the CEPT common amateur radio license. The agreement follows several years of negotiation with both the South African Authorities and the CEPT by the South Africa Radio League, with the assistance of the IARU Common License Group.

(Via SARL)

<*>

FCC issues experimental licenses

The FCC has issued two new experimental licenses that will be of interest to radio amateurs. The first is WA2XOT. It went to Motorola, Inc. to operate on 2450 to 2500 and 2162 to 2180 MHz. This, for the test and development of equipment for wireless cable data networks in the Schaumburg, Illinois area.

Further west, the Los Angeles Times and Times Mirror Company has been granted WA2XPA. Times Mirror plans to operate in 1626.5 to 1646.5 MHZ to transmit data between remote sites using INMARSAT-B terminals in the Fixed service. This, in the continental United States, Alaska and Hawaii.

(Via FCC Release)

<*>

FCC prepares for WRC 2000

The Federal Communications Commission hosted a World Radiocommunications Conference planning session on February 10th. Called WRC 2000, the purpose of this gathering was to establish very broad basic guidelines for U.S. participation in this upcoming frequency allocation assembly. This Washington, DC meeting was hosted by the FCC's International Bureau's Planning and Negotiations Division.

<*>

Next Ham WRC

Meantime, there seems to be a bit of confusion as to when the World Radio Conference will next consider ham radio related issues. Most sources are saying 2002 but The Canadian Amateur newsletter says it will be in 2001. Other non ham radio sources are indicating even a later date. They are saying not to look for any Amateur Radio related matters to be discussed by WRC until 2030 or 2035 at the earliest.

(Via TCA, others)

<*>

Florida Pirate Radio conviction

A Federal court in Florida has found a ham guilty of operating an unlicensed broadcast station.

A Tampa area ham radio operator faces the possibility of prison and fines after a federal court jury convicts him of illegally operating a pirate radio station on the FM broadcast band. Arthur Kobres, remains free on $25,000 bail with his sentencing set for May 11th.

Kobres told reporters after his conviction: "I am disappointed in the American people -- if that jury is a cross section of the American people -- which I'm not convinced that they are."

Kobres was arrested on a fourteen count indictment last November 19th when federal agents raided his home and ceased his equipment. The equipment of two other Tampa area pirate radio operators was confiscated the same day.

As far as anyone knows, this is the first time that anyone has been convicted of federal charges in connection with illegal operation of a pirate radio broadcasting station.

(Via Newsline)

<*>

CQ VHF to sponsor National Fox Hunt

A ham radio magazine is urging amateur radio clubs and operators across America to go "foxhunting" on the last weekend in April. CQ VHF Magazine says that it will sponsor the first United States National Foxhunting Weekend on April 25th and 26th.

Unlike traditional ham radio contests, National Foxhunting Weekend is not a structured contest. There are no standardized rules, log sheets or reporting forms. Rather, you set the rules for your group and go out to learn more about this exciting ham radio sport.

The CQ VHF National Foxhunting Weekend also coincides with efforts by other ham radio groups to promote this fascinating radio sport. The Portland, Oregon, based Friendship Amateur Radio Society has been working to bring international style, on foot, foxhunting -- already popular in Europe and Asia to North America. And in January, the American Radio Relay League endorsed those efforts. They also approved the appointment of a national ARRL Amateur Radio Direction Finding Coordinator to encourage more foxhunting activity.

Groups participating in the CQ VHF National Foxhunting Weekend are encouraged to send reports of their activity directly to:

Joe Moell, K0OV
P.O.Box 2508
Fullerton, California
92837

or by e-mail to:

homingin@aol.com

Again that's the weekend of April 25th and 26th for the first annual CQ VHF National Foxhunting weekend. The complete text of the press release on this exciting event can be found posted on our website at:

www.arnewsline.org

(Via CQ-VHF)

<*>

APRS QSY to begin

APRS digipeters in Missouri, Iowa, Kansas and Nebraska and Wisconsin will switch frequency to 144.39 MHZ on Saturday, March 1st. This as the first part of a national agreement to consolidate all APRS activities onto a single 2 meter frequency nationwide. Called the "APRS QSY," the plan was adopted by the users of APRS so as to get the mode off of the 145.790Mhz two meter experimental use frequency.

(Via N9UUR)

<*>

Feds say "No" to giving N6NHG a computer in jail

Citing what they call a "pattern of recidivism," federal prosecutors have asked a U.S. judge to deny hacker Kevin David Mitnick's request for a jail house computer to review materials for an upcoming trial. The government says that security interests are particularly compelling in this case, given defendant Mitnick's history of criminal conduct involving computers," the brief continues.

Mitnick holds the Amateur Radio call sign N6NHG. He is being held at the Federal Metropolitan Detention Center in downtown Los Angeles pending trial for what the government alleges as a two year "hacking spree." One that ended with his arrest in North Carolina in February 1995.

Prosecutors allege that Mitnick and a co-defendant stole millions of dollars in software from high-tech companies, damaged computers at a California college and used stolen computer passwords. Mitnick is currently serving a 22 month sentence for using a cloned cellular telephone and violating parole on a 1988 computer fraud conviction.

The government says that based on security reasons, the Los Angeles Metropolitan Detention Center generally prohibits, or substantially restricts, inmates access to computers. This, according to court papers the U.S. Attorney's Office filed in opposition to Mitnick's request.

<*>

DX

In DX, JM1LJS will be in Fiji from April 30th, through May 7th operating as 3D2LJ. Operation will be all bands. QSL direct to JM1LJS at his Callbook address.

And 6 meters is still hopping and this includes contacts almost to the South Pole. This, according to PY5CC in grid square in grid square GG-54. Peter says that on January 14th, he worked LU1ZC on Deception Island in Antarctica on 50.105 MHZ SSB. PY5CC adds that he has already worked 153 countries with 151 confirmed.

And the RSGB Contest Desk advises Newsline of a change of date for its popular 40 meter CW Contest. The date has been moved back a week to February the 28th.

And some sad news. Word that Iris Colvin W6QL passed away late last week. She was 83 and the widow and DX-pedition partner of the late Lloyd Colvin, W6KG.

<*>

1998 YHotY Award

And finally this week, the nominating period is now open for the 1998 Newsline Young Ham of the Year Award. With corporate sponsorship from Yaesu USA and CQ Magazine, the Young Ham of the Year Award seeks to honor the Amateur Radio related achievements of those hams age 18 or younger.

In addition to a trip to the 1998 Huntsville Hamfest courtesy of Yaesu, this years winner will also get to spend a week in Spacecamp Huntsville thanks to CQ.

The full details, rules and a nominating form are available right now on our website at:

www.arnewsline.org

Or send a self addressed stamped envelope to the:

1998 Newsline YHotY Award
29197 Robin Avenue
Santa Clarita, California 91350

<*>

With thanks to the ARRL, the Hudson Division Loop, and CQ VHF Magazine, that's all from the Amateur Radio Newsline. You can write to us at:

[1071]

Closed Circuit Advisory

Newsline report number 1071 for release on Friday, February 20th, 1998 to follow.

<*>

The following is a QST

AMSAT North America gives a boost in handling bandplan problems, hams in Virginia are asked to support a two hundred foot tower law and non hams on the Internet say they want test free access to ham radio. All this and more on Newsline report number 1071 coming your way right now.

<*>

AMSAT on bandplanning

AMSAT North America likes the ARRL's ideas on bandplan controls but it wants to be certain that ham satellites and manned ham radio operations that use FM will continue. This, if the League is successful in persuading the FCC to issue a declaratory ruling on the issue.

AMSAT North America president Bill Tynan, W3XO, says that he supports the intent of ARRL's initiative. But Tynan says that he will suggest to the AMSAT North America Board of Directors for the organization go on record to preserve the current practice of using FM in conjunction with Earth to space and space to Earth communication within the satellite sub-bands.

"There are a number of satellites currently operating in the satellite band that utilize FM. What I was saying was that -- subject to discussion and approval by the AMSAT-NA Board of Directors -- that I felt we should make it clear that there has to be provisions for continuing the use of those satellites -- and possibly future (FM) satellites in those segments." W3XO

But Tynan takes a much stronger position against FM in regard to non-space communications taking place in the ham satellite bands. Tynan says that he will also recommend that the Board support a ban on FM terrestrial only communications within the ham satellite segments.

"It is potentially destructive to satellite operations to have an terrestrial operation in the 145.8 to 146.0 MHz satellite band. That's really the band we are talking about. If an (interfering) operation of that type takes place it is more likely to be FM because most people have FM equipment." W3XO

As previously reported, the ARRL may ask the FCC to issue a declaratory ruling dealing with the problem of inter-mode conflicts. The League wants the Commission to assert that any operation that conflicts with established, voluntary band plans and causes interference or adversely affects others operating in accordance with applicable band plans, is considered poor amateur practice, regardless of the band on which the conflict might occur.

(Via Newsline)

<*>

FCC licensing computer failure

The FCC's Amateur Radio licensing computer system is down, and, at this point, no one knows when it will be up and running again.

Word that the regulatory agency's computer system failed back on February 10.

The situation is affecting the FCC's Gettysburg, Pennsylvania, license processing facility. It is also frustrating those who have been hoping to learn their new callsigns or updated licensing status. This is because the on-line FCC public databases on the Internet also have been affected.

Sources at the FCC attribute the situation to a combination of problems. The FCC's computer system has failed before, but not for this long. At air time its not known how long the system will be down.

(Via FCC, ARRL, Sunnyville VEC)

<*>

U.S. to participate in CEPT guest license arrangement

U.S. Amateurs soon will not need to apply for reciprocal licenses in order to operate during short visits to most European countries. While an official announcement still may be a few weeks away, it's been learned the U.S. request to participate in the pan-European guest license arrangement has been approved. Similarly, most European hams visiting the U.S. will no longer have to submit a FCC Form 610 A.

Under the soon to be implemented arrangement, a United States Technician license holder would be recognized as a CEPT Class 2 VHF only license, He or she would have full privileges above 30 MHZ. Holders of Tech Plus through Extra tickets would be given a CEPT Class 1 license. This comes with full privileges on both HF and VHF.

Only U.S. Novice license holders would not left out in the cold. They would not be eligible for a CEPT equivalent license since most CEPT countries do not offer a license of this type.

(Via ARRL)

<*>

Virginia hams asked to rally behind tower bill

Hams in Virginia are being asked to rally behind a far reaching statewide bill to insure minimal regulation on the placement of Amateur Radio antennas. The measure known as Virginia State Senate Bill 480 was introduced in late January by Senator John Edwards of Roanoke.

According to Bob Ham, KK4IY, the bill would amend the Code of Virginia to include the essence of the PRB-1 federal preemption. It would require local ordinances involving the placement, screening, or height of antennas to reasonably accommodate Amateur Radio antennas and impose the absolute minimum amount of regulation necessary.

The bill -- if approved by the Virginia General Assembly, would also prohibit localities from restricting ham antennas to less than 200 feet above ground, restricting the number of support structures and prohibit restrictive variances beyond reasonable and customary engineering practices. The only deviation from this would be in those cases where an antenna would clearly represent an unreasonable risk to human health or life.

(Via KK4IY)

<*>

Storm help

Meantime, local ARES and RACES members were activate in Virginia following a surprise storm that hit the area on January 27th. The blizzard left nearly two feet of snow in parts of the area with some 60,000 residents reported without power. At least one death was blamed on the storm.

(Via ARRL, K4LMP)

<*>

Fire help

To the North, hams furnished assistance during a recent structure fire in White Plains, New York. According to Alan Crosswell, N2YGK, the local Amateur Radio Emergency Service received a request from the American Red Cross for communications at the fire scene.

Hams established communications from the incident point to three local churches that were being used as service centers. Additional communications was set up to White Plains High School which served as a shelter for those displaced by the blaze. Ninety families were affected by the fire which also claimed one life and is blamed for ten injuries.

(Via N2YGK, N2DB)

<*>

One less VEC

There is now one less Volunteer Examination Coordinator overseeing ham radio testing. According to the FCC, Hawaii's Koolau Amateur Radio Club VEC has opted to not renew its affiliation with the Commission to oversee testing of candidates for Amateur Radio licenses.

(Via FCC)

<*>

Pirate broadcaster interferes with airport

A major threat to air safety has been removed from the airwaves. In an action similar to those in Miami and Ft. Lauderdale, Florida a few months ago, the Federal Communications Commission says that it has closed down an unlicensed FM radio broadcast station in Puerto Rico. A station that the

government says was causing severe interference to air traffic control frequencies at the San Juan International Airport.

Unlike the previous busts in Miami and Ft. Lauderdale, this time the FCC was not working alone. It worked closely with the Office of the United States Attorney for the District of Puerto Rico, and the Federal Bureau of Investigation. Together the three agencies located this pirate and took him off the air. No other details are available at this time.

(Via FCC)

<*>

Open the internet

The nation's top telecommunications regulator wants to help ease the world wide wait on the world wide web. Federal Communications Commission Chairman Bill Kennard doesn't have a plan yet but says that he intends to start looking into ways to give companies incentives to provide more high-speed connections into the nations homes. That says Kennard will help ease the congestion that many people experience when browsing the Internet. Kennard also says that the FCC should consider streamlining regulations to give these companies the incentives needed to assure that they will build these networks.

(Via FCC)

<*>

Code-free / Theory free licensing

While FCC Chairman Kennard wants easier access for all of us to the Internet, some of those already there are demanding easier access to ham radio.

You've heard hams talk about code free licenses. But how about a theory-free license? That's what some hams and non-hams would like to see and are discussing on the Internet.

The talk of a theory-free license started about four and a half months ago. It followed a single posting that challenged all testing of candidates for ham licenses as being a violation of the test taker's civil rights. The author claimed to be a non-ham and civil rights lawyer, but has never been heard from again. Responses to that challenge poured in by the hundreds. Most came from hams and were highly critical. Then non-hams got in the act, saying that the public owns the radio spectrum and the public can use it however it wants.

A loose-knit group of radio hobbyists and civil rights advocates appears to have formed on the Internet. Members claim to have the money needed to challenge qualification testing for ham radio licensing by taking the issue into federal court.

This is not the first time that such a threat of civil rights litigation has arisen on the Internet news groups. But it is the first to be carried on with such a high level of animosity and for has carried on for such a long time.

(Via Newsline)

<*>

CW can combat bootleggers

Gary Smith, W6TER, says that the best way to drive the New York City taxis off 10 meters is to make it hard if not impossible for them to communicate. He adds that hams can do this by using the oldest mode available to the service.

As reported last week, Smith says that the illegal taxi transceivers are channelized units. He says that they are found in the low end of 10 meters on 28.015, 28.045, 28.075 MHZ and so on up the band. And here is where he says that the Morse code really comes into play.

While hams cannot legally operate voice in this spectrum they can use the code. Smith says that to make their communication ineffective takes as little as ten watts of Morse code sent very slowly. He says that slow CW will affect the AGC circuits in their low cost radios and make for a very annoying situation for the illegals. He says that most of the illegals are mobiles, almost any fixed base station will easily overwhelm their radios. And if the Taxi's cannot communicate, says Smith, they will move to frequencies where they can.

But there is one question. Is it or is it not illegal to jam other communications -- even if those signals are coming from unlicensed people who are not supposed to be there? That part of the story, next week.

(Via Hudson Division Loop)

<*>

NYC-LI SM to face recall election

Embattled ARRL Section Manager Len Buoniauto, KE2LE, will have to face a recall election. This, according to recall organizer Joe Tomasone, AB2M.

Len Buoniauto KE2LE is the duly elected Section Manager for the New York City / Long Island area, but he appears to have made a significant number of political enemies. Now, Joe Tomasone AB2M says that he has received word from the leagues' Dave Sumner, K1ZZ, that the Election Committee has been asked to conduct a recall vote dealing with KE2LE.

Tomasone and a number of other amateurs in the leagues' New York City-Long Island section started the recall proceedings. They say that Buoniauto ignores many of his duties and makes decisions that they consider a detriment to the Section and the ARRL programs within the section. They also claim that he refuses to answer correspondence and communications from Section members wishing to discuss these issues.

So far there is not exact date announced for the recall vote to begin. Also, no word from KE2LE as to how he plans to go about fighting to keep his office.

(Via AB2M, others)

<*>

The internet repeater connection

Late last year Newsline reported how amateurs are linking local area repeaters to the Internet for worldwide connection to other amateurs and repeaters. In the December 1996 issue of QST Magazine's FM and Repeaters column, Murray Green, K3BEQ, wrote about the procedural aspect of communicating through repeaters using the Internet. In a follow-up article, to be released in March, Green will provide information on how to go about obtaining the software necessary to access repeaters via the Internet or to talk to other amateurs on a computer to computer basis. Look for it a few weeks.

(Via K3BEQ)

<*>

New 2 year limited warranty on ADI Radios

On the ham radio business front, word that ADI is extending the limited warranty on all of its radios purchased to 2 full years. This applies only to ADI radios purchased between December 17th of 1997 and March 13th of this year. To receive a service contract for your radio's second year contact ADI direct or at their website. Its located at:

www.adi-radio.com

(Via ADI Press Release)

<*>

Tropical Hamboree

Attendance was definitely up at this years Miami Tropical Hamboree, but two things were missing. There were very few youngsters and even less used ham radio equipment.

Vendors in the commercial display area say that are elated at the size of the crowd and the way that those attending were spending. They say it's a lot better than 1997 when attendance and spending was down from previous years.

But, several did remark that there were very few teen or pre-teen age hams in sight. Rather, the crowd seemed to be composed of elderly hams and an almost equal number of non-hams who were busy in the flea market area buying and selling computer gear.

Ironically, new and used computers seemed to be the big flea market item. By comparison, little ham gear to be found. In this, the Tropical Hamboree

seems to have fallen in line with the trend of most ham radio conventions to become computer swap-meets as well.

But nobody was complaining. The flea market computer deals at this years Tropical Hamboree were very good -- if not the best ever. As a result, hams are speculating that it may be that the computer industry is what will save ham radio conventions from going the way of the dinosaurs.

(Via Newsline)

<*>

Caution when using "AUTO-ANSWER"

When you leave town, please be cautious about setting your e-mail on auto-answer. The January North West Oregon SBE Newsletter says that last summer, one person generated 400 plus messages through the EAS Oregon listserver.

And on Christmas Eve an employee of the Seattle FCC office put the e-mail on auto-answer. As a result the Washington State EAS listserver regenerated over 2300 messages over the next two and a half days.

(Via Portland SBE News)

<*>

Oldest VK ham

Australia's oldest radio amateur, Harry Angel, VK4HA, turned 106 last December 14th. Australia's Q News says that Angel is a native of the UK. He arrived in VK-land from California after a trip around the Horn as a very young sailor. A World War I veteran and radio repairman, Angel has been a ham since 1935. Q News says that television stations in Australia featured reports about VK4HA on his birthday.

(Via Australia Q-News)

<*>

Date slips for next SAREX mission

The launch date for the next Shuttle Amateur Radio EXperiment has slipped until late this year. SAREX is scheduled to fly aboard STS-93. It was originally was scheduled for launch in August, but its primary payload will not be ready. Currently, this flight is the only SAREX mission scheduled during 1998.

But there is still hope for another possible SAREX flight in October. This on STS-95 which will carry U.S. Senator and former astronaut John Glenn back into space. According to AMSAT Vice President Frank Bauer, KA3HDO, putting SAREX on this flight has been under consideration for several months. At air time nothing for STS-95 has been confirmed.

(Via AMSAT-NA, others)

<*>

B.J. Arts, WT0N - SK

Some sad news within the ham radio space community with word that Amsat News Service Editor B.J. Arts, WT0N, has died. According to AMSAT North America president Bill Tynan, W3XO, Arts passed away the evening of February 8th at a hospital in his home town of Hibbing, Minnesota from an acute case of influenza.

Arts, who was 37 years old and had suffered for a number of years from acute diabetes. He had been acting as Amsat News Service Bulletin Editor for several years. According to Tynan, WT0N had been doing an exemplary job in that important volunteer position.

(Via AMSAT-NA)

<*>

Franklin Institute station to close

A famous ham radio station, long accessible to the public may be closing down for good. Bob Joseweit, WA3PZO, reports via the Hudson Division Loop electronic newsletter that the famous amateur radio station at the Franklin institute and Science Museum in Philadelphia may be done away with. According to Joseweit, plans call for the station floor space to be converted into offices sometime this summer.

(Via WA3PZO, Hudson Division Loop)

<*>

DX

In DX, the "DX News Sheet" reports that VR6MG is active on 20 and 40 meter CW from Pitcarin Island. No specific times or frequencies were given, but OPDX says that VR6MG was reported on 14.210 MHZ at 01:16 and 7.001 MHZ at 13:25 UTC. No QSL information was supplied.

(Via DXNS)

And Geoff Brown GJ4ICF says that he finally has received his license to operate from Equatorial Gunea. Look for him as 3C5I on 6 meters from the city of Malabo.

(Via The Modern DXer)

Lastly these statistics from the American Radio Relay League. Their DXCC Desk says that the number of unprocessed applications at the end of December 1997 was 556. This represents some 53,337 QSLs.

(Via ARRL)

<*>

ENY Essay winners honored

Brenda Lee Spagna, N2TTO, and Eileen Mang, N2QLB are the two winners of last years ARRL Eastern New York Section Essay Contest. The two were honored for their paper which they say depicts the true spirit of amateur radio.

According to Ed Rubin, N2JBA, the contest was held to commemorate Governor George Pataki proclaiming last June as "Amateur Radio Month" in New York State. Spagna and Mang received the award on January 14th at a meeting of the QSY Society held in Carmel, New York.

Please join with us on congratulating Brenda and Ellen on their achievement.

(Via Hudson Division Loop)

PRESS RELEASE
February 22, 1998

1998 YOUNG HAM OF THE YEAR AWARD NOMINATING PERIOD NOW OPEN

The nominating period for 1998 "Young Ham of the Year Award" is now open. Originally known as the "Westlink Report Young Ham of the Year," this award program, now in its second decade, is presented annually to a United States licensed Radio Amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby/service.

Any continental United States (FCC licensed) ham radio operator aged 18 and younger who has used Amateur Radio to significantly contribute to the benefit of the service, to the sate of the communications art, to their community or the nation is eligible to be nominated.

All nominations must be submitted before June 30, 1998 on an official application. Application forms are available for a self addressed stamped envelope mailed to the 1998 Young Ham of the Year Award % Newsline, 28197 Robin Avenue Saugus California 91350. The nominating applications are also available for electronic download from several sites that provide Newsline materials over the World Wide Web and including the Newsline website at www.arnewsline.org.

With continued corporate sponsorship, the award presentation is scheduled take place at the 1998 Huntsville Hamfest. The Huntsville Hamfest is one of the nations largest and most popular Amateur Radio conventions. It is held annually the third weekend in August at the Von Braun Civic Center in downtown Huntsville and usually attracts 7000 or more attendees. The 1998 "Young Ham of the Year" will also get to spend a week at Spacecamp-Hunts-ville.

The Young Ham of the Year Award program was conceived in 1985 by then Westlink Report "Editor-in-Chief" Bill Pasternak, WA6ITF. His desire was (and still is) to highlight the accomplishments of the nation's many young radio hobbyists, and to encourage the entry of more young people into the exciting and rewarding hobby of Amateur Radio.

With the absorption in 1995 of the Westlink Report readership base into Worldradio Magazine, the awards originator has decided to continue it under the banner of his own "Amateur Radio Newsline" organization. It is his belief that this real-life experience may lead the award winners and many other young hams into technology based careers that will make them the scientific leaders of the future.

The Amateur Radio Newsline, better known as "Newsline" is the worlds largest not for profit and totally independent ham radio broadcast news and data information service. It was organized in 1976 by Jim Hendershot WA6VQP and Bill Pasternak WA6ITF. Since that time it has produced and put to air over 1070 consecutive weeks of news of free bulletin programming dealing with Amateur Radio and related personal communications issues.

Corporate underwriting for the "Young Ham of the Year Award" program is traditionally supplied by Yaesu U.S.A. Corporation and CQ Magazine. Yaesu is a world leader in the design, manufacture and distribution of high quality Amateur Radio and commercial two-way radio equipment.

CQ Magazine and its sister publications CQ-VHF and CQ-Contest are owned by CQ Communications and are considered the trend-setting publications serving todays modern radio amateur. The continued support of this award by Yaesu and CQ has been well-received within the U.S. Amateur Radio Service.

The United States Amateur Radio service is force of over a half-million publicly spirited personal radio operators who are licensed and regulated by the Federal Communications Commission. They provide the nation with a pool of trained radio operators and technicians to assist the United States in improving international relations. They are also available as a voluntary group of skilled public service-oriented individuals with their own radio equipment who are available to provide emergency communications in times of disaster.

Past recipients of the Young Ham award, all of whom epitomize the heart of dedication to their nation include Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986); David Rosenman, KA9PMK, of Muncie, Indiana (1987); Jonathan Binstock, NK3D, of Potomac, Maryland (1988); Erin McGinnis, KAOWTE, of Topeka, Kansas (1989); Mary Alestra, KB2IGG, of Staten Island, New York (1990); Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991), Angela (Angie) Fischer, KBOHXY, also of St.

Louis (1992); Kevin Boudreaux N5XMH of New Orleans Louisiana (1993), Allison Zettwoch KD4CKP of Louisville Ky. (1994), Adam Weyhaupt, N9MEZ (1995), Toby Metz, KB7UIM of Boise Idaho (1996) and Brian Mileshosky, N5ZGT, of Albuquerque New Mexico (1997).

-30-

THE 1997 YOUNG HAM OF THE YEAR AWARD NOMINATING FORM INSTRUCTIONS AND AWARD RULES

1) Fill out the attached nominating form completely.

2) EXTREMELY IMPORTANT: You are required to supply full and complete verification of any claims made regarding your nominees qualifications. The more documentation that you supply, the easier it will be for our judges to reach a decision. Nominations without this documentation will be returned without being given consideration.

3) This award is not a contest for a prize. Any prizes given are secondary in nature. A person selected as "Young Ham of the Year" is judged on his/her contributions to society through Amateur Radio. For example, a youngster whose only claim to fame is that of being licensed as an Extra at age four would not necessarily be judged as having made a significant contribution to the Amateur Radio service. On the other hand, a 14 year old Novice running a net during a major disaster or crisis would definitely be given consideration.

4) The Amateur Radio Newsline (Newsline) sponsors the award program and guarantees that the winner will receive a plaque noting that honor. All other gratuities are provided at the option of any corporate underwriter. An underwriter may, at its choice, provide the winner with a trip to an Amateur Radio convention or hamfest of our selection. If awarded, this trip will be limited to transportation for the winner to the venue, hotel accommodations, convention and banquet tickets and a prize. Not covered are any miscellaneous costs such as local transportation, incidental meals, locally made purchases, etc.

5) Neither Newsline or any corporate underwriter provide transportation or lodging for a parent, other relative or guardian traveling with or accompanying the award winner to the convention city. A parent, relative or guardian is free to share accommodations with the winner based on their personal arrangements.

6) In the event that a winner is unable to travel to the convention, the Newsline will attempt to arrange a special award ceremony where the recipient resides; I.E.: in his/her school, before his/her radio club, etc. In this case the trip to the convention will be forfeited by the recipient, but all other aspects of the award will remain.

7) Decision of the judges is final.

8) Please mail the nominating forum along with all substantiating materials before June 30, 1998 to the 1998 Young Ham of the Year Award, 28197 Robin avenue, Santa Clarita Ca. 91350

2956. Schematic for 4-1000 amplifier

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-01 00:00:00 UTC
From: Bob Bethman <rbethman@erols.com>
Message-ID: <34F9CFFB.3D3612B0@erols.com>
Source record: 176906
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.amateur.misc

Hunting for schematic(s) for 4-1000 amplifier, single or paired.
(Yes I know what ONE puts out.) I am interested in tuned
input information, bandswitch and coil info, and PI network
values.

I figure there is no sense in re-inventing the wheel.

SB DX @ WW $OPDX.346
Ohio/Penn DX Bulletin No. 346

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 346
BID: $OPDX.346
March 2, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W1LW, WB2RAJ/WB2YQH & The 59(9) DXReport, W4WX, N5OGP, KB6NAN, N6DCD, NO6X, W6OAT, AA7KE, CT1EAT, DJ7IK, DK9KX, EA2CLU, EA5XX, G4BUE & DX News Sheet, G0PSE, HA0HW, HA0KHW, HB9DLE, JA1ELY, LU1DZ, ON4WW, SV1NA, UA2FZ and YU1AB following DX information.

3D2, FIJI. After their operations from West Samoa (See 5W below), Slav/ OK1TN, Vrata/OK1KT, and Vasel/OK1VD of the OK DX Foundation (OKDXF), will now be active from Nadi, March 24th through April 1st, as 3D2KT and 3D2TN. Activity will be on CW/SSB on 160-6 meters with beams and amplifiers. QSL via OKDXF, P.O. Box 73, Bradlec 293 06, Mlada Boleslav, Czech Republic. ADDED NOTE: They may try to go to Rotuma Island. This operation depends on finding transportation.

3D2, FIJI. Mamoru, 7N1RTO (ex-JG2EBN), will be traveling here on business and hopes to operate as 3D2ME in his spare time. Look for him March 8-11th on 20 or 15 meters SSB. QSL via JARL Bureau or direct to his new address: Mamoru Endo, 102-83-2 Kizuki-Omachi, Kawasaki, 211-0031 Japan

5A21, LIBYA. By the time you read this the Belgian team of Tiny/ON4CAT, Frank/ON4CEL and Patrick/ON4APS will have met Ali and Abubaker, their Libyan friends at 5A1A, and be on the air using the special callsign 5A21PA. They will be active on all bands on CW, SSB and RTTY with 100 watts. Activity will last until March 7th. (ed. While writing the OPDX bulletin Sunday morning, most of the activity seems to be on 20, 15 and 17 meters so far.) For more information, check out their homepage: http://users.glo.be/~frankyb/5a21pa.html

5W, WESTERN SAMOA. The "DX News Sheet" reports Slav/OK1TN, Vrata/OK1KT, and Vasel/OK1VD, will be active March 14-23rd as 5W0SZ and 5W0VV from Apia. Activity will be on CW/SSB on 160-6 meters with beams and amplifiers. QSL via OKDXF.

7X, ALGERIA (also possible S0 trip). Mark, ON4WW (ex-9x4ww), reports he is going to 7X-land shortly. This location will be close to S0, Western Sahara, and he will try to operate from here also.

9Q, DEMOCRATIC REPUBLIC OF CONGO. Pat, 5N0T, and his XYL Nicole, 5N0YL, who were active from Nigeria, will arrive March 21st here. They will be active once they receive their licences. Hopefully this will be by the end of April. QSL both via F2YT.

A7, QATAR. The "59(9) DXReport" reports Dave, KC9IM, who is currently signing J52IM, expects to take up a new assignment in Doha soon. His callsign and other details have not been announced yet. QSL via KB9XN. Meanwhile, Jabor, A71BY, is active often on 20 meters SSB. Check 14175 kHz (or 14195 +/-) around 1345z. QSL via F5PYI.

BRAZILIAN GENERAL/IOTA DXPEDITION NEWS.......
RATONES ISLAND - Will be aired by PR5L, March 26-30th, using SSB and CW. Ratones Island is IOTA SA-026, and DIB 64. QSL via PP5LL.

SAO FRANCISCO ISLAND - Will be aired by PR5L, April 16-20th, using SSB and CW. Sao Francisco is SA-027, and DIB 08. QSL via PP5LL.

GUARAZES ISLAND - Will be aired by PT163MP, May 1-5 May, using SSB and CW. Guarazes Island is SA-026, and DIB 71. QSL via PP5LL. The special callsign PT163MP will be used to commemorate 163 years of freedom from the Military Police in Santa Catarina State, Brazil.

MEL ISALND - Will be aired by PQ5L, May 28-31st, using SSB and CW. Mel Island is SA-047, and DIB 24. QSL via PP5LL.

ADDED NOTES: Look for this islands on the usual IOTA frequencies:
CW - 3510, 7010, 14010, 21010, and 28110
SSB - 3760, 7060, 7260, 14280, 21260, and 28460.
Also PP5LL address is: LIRA, P.O.Box 08, 88010-970, FPOLIS-SC, Brazil

C42, CYPRUS. Operators UA2FB, UA2FF, and UA2FZ will once again use the special callsign C42A during the CQWW 160 SSB Contest. QSLs for the C42A operation will go to DK4VW CBA (maildrop only).

EA6, BALEARIC ISLANDS. The "59(9) DXReport" reports Vincent, EA6AEI, is active daily on 18150 and 24970 KHz from 1600-1700z.

ED, SPAIN. Operators EA5GRC, EA5GJT, EA5AQA, EA5CE, S01M and EA5XX will air the special callsign ED5WPX during the next CQ WPX Contest as a Multi/Single station from Spain.

GB0, ISLES OF SCILLY (ENGLAND). The Taunton and District ARC (TADARC) will be activating St. Marys, Isles of Scilly (IOTA EU-011), with the Special callsign GB0SM during the period April 25th through May 2nd. Four operators plan to maintain a 24 hours operation, with Icom IC737A, IC725 HF Transceivers on 160 to 10 meters. They will be using R7000 Vertical, wire dipoles and long wire antennas for CW and SSB modes. A VHF transceiver and 3 element 6 meters beam will also be used if VHF conditions are favorable. QSL via the bureau or direct to: G3WNI, Bill Lindsay-Smith, Way Close, Hemyock, Cullompton EX15 3QY, England

Bureau QSLs can also be obtained by E-mail to: tom@tctaylor.demon.co.uk

HB2, SWITZERLAND (Attention Prefix Hunters!). Sigi Bill, HB9DLE, President of the LETZI DX-group, reports the prefix "HB2" will be aired for the first time. The special callsign HB2CA will be used by the LETZI DX-group of Switzerland and will only appear on the bands during the major contests in 1998. The LETZI DX-group consists of twelve active DXers and contesters running a nice clubstation and celebrating the 20th anniversary of the club. QSL via bureau to the manager HB9DLE.

IRIS COLVIN, W6QL, SK. It is sad to report that well known DXer Iris Colvin, W6QL, became a "Silent Key (SK)" at the age of 83 on Wednesday, February 18th. She died peacefully at her home in Richmond, CA. Iris was renown as a prolific DXpeditioner, and along with her late husband Lloyd, W6KG, activated many of the world's rarest DXCC locations. She and Lloyd, also were avid QSLers and boasted the world's largest collection of cards -- all alphabetized and filed in cabinets which occupied an entire room in their home. Iris was a member of DXCC Honor Roll, president of the Yasme Foundation and a past president of the Northern California DX Club. She was inducted into the CQ DX Hall of Fame in November, 1976. OPDX and the members of NODXA, along with many DXers throughout the world will never forget the many QSOs/memories she had provided over the years. Dxers have lost a rare one!

J8, ST. VINCENT. EA2ADJ, EA2BP and EA2CLU, are making plans to be active here between March 21st and April 1st. This includes activity in the CQ WPX SSB Contest (March 28-29th) as J80R (Juliet eight zero Romeo). Before and after the contest, they will use the callsign J8/EA2BP on all bands on SSB/CW and RTTY.

JD, OGASAWARA. Look for JF1LGD/JD1 to be active mainly on SSB (some CW) from here. He has been active on the WARC bands (18 and 24 MHz) and also on 15 meters. Activity will last until the end of March. Meanwhile, look for JA1FUY, JF1GUQ, JA2CVF, JA1XVU and JI1FOL to be active March 14-17th. They will sign as homecall/JD1. Activity will be SSTV only on 20 and 15 meters.

JT, MONGOLIA (Update). As mentioned in OPDX.343, a Hungarian group who are members of the Hungarian Pannon DX Club will operate from Ulan-bator from May 17th through June 2th. The team which includes HA0HW, HA4GDO, HA6NL, HA7SK and HA7VK, plans to keep 2-3 stations simultaneously on the air 24 hours a day to maximize band openings on all HF bands. Activity will be on SSB, CW, and RTTY. Suggested frequencies will be:

CW - 1821, 3511, 7011, 10101, 14011, 18071, 21011, 24891 and 28011
SSB - 1841, 3789, 7089, 14189, 18141, 21289, 24941 and 28489
RTTY - 14079 and 21079 kHz

They state that if propagation allows them, they will work CW, 25 kHz from the bottom of the bands edge for U.S. stations to give more people a chance to work them. They also mention that they want to work on satellites such RS-10, 12, and 15, and if they can obtained LIS, they

want to work on 50 MHz. The callsign will be announced later. All operators will probably use their own suffixes, but the prefix is still not known yet. During the CQ WPX CW Contest weekend, they would like to use the special callsign JU0HA. For up-to-date announcements, check out the Web page of Pannon DXC at: http://www.dunanet.hu/pannondxc/ The DXpedition team would gratefully accept contributions from both individuals, clubs or firms. Contributors should contact Laci, HA0HW at: ha0khw@c3.hu or Laszlo Szabo, P.O.Box 24, Puspokladany, H-4151, Hungary.

KG4, GUANTANAMO BAY. A team from the Florida Contest Club (FCC) will be in GTMO for the ARRL International DX Contest March 7-8th. The team members are: Doug/KG4OX (W4OX), Bill/KG4WW (KX4WW), Bill/KG4GC (W4WX) and their host Rusty/KG4AU (WV4N). The callsign KG4GC will be used during the contest. Members will arrive on Wednesday, March 4th, and remain for one week. Members will be active on all bands and modes before and after the contest. QSL contest QSOs to Bill Gallier, KG4GC/W4WX, 4094 Sandy Run Drive E., Middleburg, Fl. 32068. Please include a SASE. Bureau cards will also be answered. QSL all others to home calls. Any comments or questions can be sent to: w4wx@bellsouth.net

KH1, BAKER ISLAND. The MKDXF and SSIDXG gang is underway to Baker Island where the USFWS will drop one team member off on Tuesday morning. They will then proceed to Howland and land, sometime between the 3rd to 5th of March.

KH6, HAWAII. Tamaki, JG1OUT, will be active from here as KH6/JG1OUT, March 7-10th. He will take a small AMP and a tri-band yagi. Look for him on 40-10 meters SSB/CW. QSL via JARL Bureau or direct to his callbook address.

LU1ZC, DECEPCTION ISLAND. Still need this one on 10 meters? Listen to LU1ZC's 10 meters beacon on 28212 kHz. The team there states propagation has been very poor. They continue to try to improve their contacts on 160, 80, 10, and 6 meters, but the propagation conditions are not helping. Most of the time they are on 15 and 30 meters which are the only useful bands. Last report, they have made a total of more than 35000 QSOs.

P5, NORTH KOREA. Toma, YU1AB, reports to OPDX that Rasa, YU1RL, has gone to Pyongyang, and he is there right now. He will be trying to get a licence from North Korea.

QSL INFO AND NEWS.....
Walt, W1LW, reports to OPDX that for those who have been waiting for the K7K Kure Island QSLs (for contacts made in August and September 1997), they are reportedly back from the printer. It appears that AH0W is now sending them out. Walt states it is a very nice multifold QSL.

Dianna, KB6NAN, reports that DL5WM will be getting the 9X0A QSL cards out starting some time in March.

Hans, DK9KX, reports he wants to close the following logs by June 30th (1998):

GU5CKW, -CKX Guernsey 1978 & 1979
FH0FLP Mayotte 1980
FR0ACB/G, FR0ACC/G Glorioso Isl. 1980
PY0ZSD, -ZSH, -ZSG Peter & Paul Rocks 1983
DK9KX/S9 Sao Tome 1985
TY9SI Benin (SSB Only) 1988 April
5U7DX Niger 1988/89
3D2CR Conway Reef (SSB Only) 1989
ZS9AAA/1 Penguin Isl. 1990

QSL cards via the bureau or direct. For direct cards, please send two U.S. green stamps or one IRC, plus sase.

S92FC, S97A AND S91FC QSL STATUS. Francisco, CT1EAT, reports all direct requests for S92FC, S97A and S91FC have been mailed. Bureau requests are already processed and will be sent to bureau office (REP) next week. Further requests will be answered on a weekly basis, but PLEASE NOTE: Due an "unexplained" print error, the address printed on QSL is wrong. The correct adress is: P.O.Box 172, 7800 Beja, Portugal (Rua dos Acores,6-2Esq 7800 Beja is also valid.) Please include a SASE or a SAE + 1 IRC (or 1 USD) only!

John Devoldere, ON4UN, Member of the board of UBA (IARU) and QSL Manager for Belgium, states that cards sent to the VRB QSL Bureau (P.O.Box 94, B-2500 Lier, Belgium) does not guaranteed delivery to all members of the various radio societies in Belgium. Only the UBA QSL Bureau (IARU) at: UBA QSL Bureau, P.O.Box 900, B9000 Ghent, Belgium, can be guaranted delivery.

SV5, RHODES ISLAND. Yorgos, SV1NA, reports that two very active fellows, Jim, SV5EFB, and George, SV5DZG, have announced they will be active EVERY WEEKEND on 24 MHZ SSB only from the island of Rhodes. Their activity will continues for all 1998. They accept QSL cards via the SV bureau in Athens Greece.

V2, ANTIGUA. Two members of the Oklahoma DX Association will be operating from here May 26th until June 2nd. Jim, K5TT (ex-WV5S), and Dave, W5AO (ex-N5CG), will be operating 160 through 10 meters including the WARC bands. They will also enter the CQ WPX CW Contest. Probable callsigns are V26TT and V26GG, respectively. QSL information for V26TT is the K5TT/WV5S callbook address, and Box 88, Morris, OK 74445-0088 for V26GG. Additional information is available via k5tt@contesting.com.

XU, KAMPUCHEA (Well this is another interesting callsign!). Operator Hiroo, XU2A, is currently not active from here because he is now in Laos on business. He will be going back to XU this month and will be active after the WPX contest. He will be using the callsign XUX0 (XUX zero) from XU island.

Z3, MACEDONIA (former Yugoslav Rep.). Mike, NO6X, and Mike, NN6C, will be operating from here for about a period of about 2 weeks. Activity should be on all bands SSB/CW. Their main goal is the WPX SSB contest.

They should be on the air from about the 19th of March to the 1st of April. They will actually leave Los Angeles on the 18th and arrive back on the 2nd of April. Their expected callsigns are Z38/NO6X and Z38/NN6C outside of the WPX contest. During the contest, they will use Z38C. QSLs will go to home callsigns, and QSL for Z38C will be via NO6X.

I've had my FT920 for a few weeks now and I can't say anything bad about
it. The DSP is really effective as is the notch filter. Useful to have a
seperate receiving antenna facility, not that I've got space for a
Beverage! The FT920 has many features, and I am still finding my way
around. Push button band change switches are a joy to use, as is the
fast shuttle tuning. Seems like good value for money. Does take up a
fair bit of space - quite a heavy beast. So - no regrets - I intend to
keep mine for a long time
Regards

2960. Excellent condition TH-78A with accessories $350

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-01 00:00:00 UTC
From: wd4sgu@prodigy.net
Message-ID: <6dcm34qsm1@nnrp1.dejanews.com>
Source record: 176910
Cross-posted to: rec.radio.amateur.misc,rec.ham-radio

I have a like-new Kenwood TH-78A with all original equipment (box, manual, antenna, wrist strap, charger, and battery in excellent condition), and the following accessories:

ME-1 200-memory expansion chip (total of 250 memories)
SMC-34 Remote-control programmable speaker/mic with volume control.
SC-35 Soft case for standard batteries
SC-36 Soft case for large batteries
KLF-3 Filtered cigarette lighter power cord.

The radio is opened up for full tx/rx capabilities and crossband repeat. It has seen only minor use, and works superbly. It is the most full-featured dualband ht available, and will give you good service. I have all of the original packaging and documentation for the accessories
as well.

Price is $350. Reply here or email me at one of these addresses, after removing NOSPAM-:

NOSPAM-wd4sgu@juno.com
NOSPAM-wd4sgu@prodigy.net

Thanks.

Mike - WD4SGU

>
>1. Change Morse code speed for General Class to 5WPM.

Change it to 5 WPM period. There is no need for an escalating
series of Morse tests. 5 WPM satisfies current treaty requirements,
further speed testing serves no useful purpose.

>2. Immediately upgrade all "old" (pre-1981) Tech-Plus to
> General. (These folks took the same written test elements as
> General.)

That's pre-1989. Element 3 was split in 1989.

>3. No new Novice licenses. Existing licenses would lapse or
> upgrade at end of current license term. The Novice license
> is no longer a popular "entry point" info amateur radio,
> and upgrading to Tech-Plus would entail only a short written
> test.

Yes. Novice no longer serves a useful purpose.

>4. (a) Anyone holding a Technician license issued before the
> effective date of new rules would be able to upgrade to Technician
> Plus on passing a 5-wpm code test.
>
> (b) Anyone issued a Technician license after the effective date of
> new rules, since they will have passed a written examination dealing
> only with VHF, would have to pass a new written exam oriented toward
> HF as well as a 5-wpm code test to upgrade to Tech-Plus.

This seems confused. Element 3 was split into 3a and 3b back in 1989
if I recall correctly. You've already grandfathered "old" Techs to General,
so what is this supposed to mean? A "new" Tech would need to take 3b and
the 5 WPM Morse test to get on HF, and that would make him a General.
Tech Plus vanishes.

>5. Remove the current CW allocations for Novice/Tech-Plus, and substitute

>6. Change the existing HF phone bands as follows:
>
> Tech Plus (200W) 3925-4000
> General 3800-4000
> Advanced 3725-4000
> Extra 3700-4000
>
> Tech Plus (200W) 7250-7300
> General 7200-7300
> Advanced 7125-7300
> Extra 7125-7300
>
> Tech Plus (200W) 14275-14350
> General 14200-14350
> Advanced 14175-14350
> Extra 14150-14350
>
> Tech Plus (200W) 21350-21450
> General 21250-21450
> Advanced 21175-21450
> Extra 21150-21450
>
> Tech Plus/Novice (200W) 28300-29700
> General/Adv/Extra 28300-29700

You've turned Tech Plus into General with the testing changes, so there is no need for a Tech Plus band segment.

I see no need to do *any* of this balkanization of HF. Simply open HF to all amateurs holding a General or higher license. If they are qualified to operate on one HF segment, there's no reason to believe they are unqualified to operate on an adjoining HF segment with similar characteristics.

Voluntary bandplans to address various mode usages are common in most of the world. The same can apply to the US. This would be more in keeping with the idea of CEPT. And also would follow Lyle Johnson's idea that Part 97 could simply say "here are the band edges, stay inside them." We'd handle the rest ourselves by voluntary band planning.

In other words, there should be two basic licenses, Tech and General. The difference between the two

would be that General is tested on HF propagation
and HF regulatory issues and 5 WPM Morse Code
while Tech is not. General would, as it did pre-Incentive
Licensing, grant all amateur privileges, while Tech
would be VHF+ only as it is now.

Advanced and Extra would be mostly honorary, as
they were pre-68. Perhaps they could retain first pick
for vanity callsigns. Tech Plus would simply disappear
as it would now be identical to General.

An alternative I could support would limit Tech and
General to 200 watts, and require passage of 4A
and 4B to be allowed to run more power. But current
Generals and Advanced would raise a howl about
that, logical and justified though it might be that a
higher degree of technical knowledge should be
required for high power operation.

2965. Confessions of a Morse addict: 24 hours without my paddles

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-01 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6dctgs$i9k$1@w3eax.umd.edu>
Source record: 176915

As a serious mobile CW operator, I recently traveled to a
club meeting where it was realized that no paddles could
be found.

I ran to the car and got mine, and brought them to the station.

When I left at 9 p.m., I realized that I had left them at
the shack. "No problem," I thought, as I was used to putting
'em on the passenger seat, and I had a passenger in the car.

We proceeded to get on 20m SSB and wow! R1ANZ in Antarctica!
Anyway, 30 minutes of calling netted us nothing. Supposedly
the Russian stations down there have a slightly high local
noise level.

At any rate, I TRIED working SSB whenever I drove at any time
during the next 24 hour period. Not having my trusty paddles
handy was like me getting laryngitis and losing my voice.

It was AWFUL.

I think I know how smokers who quit "cold turkey" feel.
My heart goes out to them.

Fortunately, that evening, I ran down to the club and rescued
my paddles. My laryngitis had cleared up!

ZUT!

2966. ACS Newsletter for 28 Feb. 1998

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-01 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6dc5uj$j13@news.Hawaii.Edu>
Source record: 176916
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <591>

.....
>From the Editor's Desk:
We're pleased at the almost 600 Newsletter Members that have subscribed since we started the Newsletter one year ago this month. We hope that, whatever organization you represent, that you can make good use of the valuable information submitted by our members. No one organization can be the be-all, end-all to disaster response. It is only by our working together, that we can be truly responsive to the citizens we serve.

In that spirit, I encourage you to consider your audience when posting to this list.
Members encompass many different emergency organizations; while we are happy to hear
of the particular achievements of any particular group, you may find yourself running into trouble if the message infers that one group should have emphasis over another.
Mr. Addys' comments of two weeks ago lead a few of you to concentrate more on the messenger than the message; his email address was provided so you could respond to him directly if that was your wish. The personal flaming of Mr. Addy will accomplish little, and takes away from the cooperative spirit of this mailing list.

Let's keep personal flaming to a minimum, and rather concentrate on how we can cooperate together for the mutual good of the people we serve. - Dave Larton
.....

>From the mailbag:
From: kd6pct@juno.com (Jeffery D Hannon)

During the flooding in the Manteca, Ca. area in 1997, our RACES group had its very first call to action. We are a very small group, and had some difficulty working all the hours we needed to cover. Our City Emergency Coordinator saw fit to open up the operation of the disaster work to any amateurs in the community to assist and augment the RACES personnel, with RACES being the coordinating entity. We also had help from participants in other RACES and/or ARES personnel from other counties. The one thing that stuck in my mind is we had people coming in from Yuba County, one of the more severely flooded counties of the time.

Our operation was successful, and we had many positive comments about the professional way we handled ourselves. We also had the comment made that we were "the glue that held the operation together", speaking about the communications coordination between agencies.

Now, this being our first major disaster, all of us in the local RACES group thought we were pretty great. After a self-critique though, we found many, many areas upon which we could improve ourselves considerably. We have also pretty much learned that, even though we can do a good job, we don't let it go to our heads; there is always room for improvement.

I think the few following points should be observed before turning away communications assistance using other than amateur radio:

1) Make certain you will not be overloaded with trying to provide more than the group is capable of handling. Make note of the needs, then try to either find an alternate means of communication to provide for the need.

2) Make certain the other communications means has somebody acting as it's coordinator to interact with the other communications coordinators.

3) Remember, Prioritize, prioritize, prioritize!! Not all requests for communications are a must have situation. Also, determine what type of radio communications are best suited for each of the communications requests. Different modes work or are best suited for certain communications needs.
As a quick example, I belonged to the Livermore REACT in 1980/81. WHen the earthquake hit there, I coordinated transportation for special needs students from their school to their homes. This was on CB channel 9 during a heavy skip period, and was set up in an hour prior to my going to work at 3:00 p.m. This took the burden off of many different groups, and helped the worried teachers, students, and parents.
This didn't need a big group of people, nor did it need a lot of red tape with the local agencies. I felt good about it, but didn't think to brag that it wouldn't happen if CB'ers weren't there.

4) If you belong to a communications group, hobbyist or professional, and you want to help out in the community, find out who the city emergency coordinator or communications coordinator is. Perhaps something can be

worked up where they can incorporate your group into the city's emergency plan as has been done in so many areas.

Yes, communicators can place an extra burden on the system in an area hit by disaster, but so does any manpower reliant agency. Yes, problems can arise with the conceit of communicators in various parts of the rf spectrum, but so can those providing search and rescue, law enforcement, fire, and other professions vital to assisting in the recovery process of a disaster. It isn't a group specific problem. It happens in all walks of professional life, and certain sacrifices must be made, but it shouldn't get to the point of pettiness; especially if it will affect the efficiency of operations.

The final point I would like to make is this. Regardless of whether or not there is conceit among any particular communications or responding agency, at least there are those, even though not enough, willing to put in what time they can volunteer to help their neighbors out in a disaster. The more help, the quicker help and services can be provided, and the less intense and short lived the overwork burn-out will strike those few currently providing communications. I commend all those putting in the time they can to protect the lives and property of my friends, neighbors, and relatives on a volunteer basis.

Hope I didn't ramble too much. You can edit what you want. I hope I got the content right in responding to the previous two ACS newsletters. Thanks for a quality e-mail publication.

From: Joe Morris <jkmorris@juno.com>

Dave,
Thanks for making this service available. I'm looking forward to my first newsletter this weekend.

Concerning MARA, they do have a website at <http://www.mara.net>. The last time I visited the site, it was set up to find locations rather than information about MARA, i.e. FAQ.

I am working on getting the same information you requested for my local ham radio club's website, <http://www.avarc.av.org> if your curious. Unfortunately, my predecessor had all that information and he has since moved out of state and nobody knows how to contact him. If you don't mind getting a "rain check" I will be happy to send it to your later when I finally find it.

Joe Morris

MONMOUTH, Oregon [DPSST] - The U.S. National Fire Academy (NFA) and the Oregon Department of Public Safety Standards and Training (DPSST) will co-sponsor the NFA course entitled, "Emergency Response to Terrorism: Basic Concepts" (ERT:BC) in Ontario, Oregon, on March 7-8, 1998.

This two-day course is designed to prepare first responder personnel to take the appropriate course of action at the scene of a potential terrorist incident. The course will provide students with a general understanding and

recognition of terrorism, defensive considerations (biological, nuclear, incendiary, chemical, and explosive), as well as command and control issues associated with criminal incidents. When an incident occurs, the student will be able to recognize and implement self-protective measures; secure the scene; complete appropriate notifications to local, State, and Federal authorities; and assist in completing a smooth transition from emergency to recovery and termination operations.

Target Audience:
The primary target audience for this training includes hazardous materials, fire, and emergency medical services first responder personnel. The secondary audience includes law enforcement personnel, emergency communications personnel, jurisdiction emergency coordinators, public works managers, and public health providers.

EMERGENCY MANAGEMENT EDUCATION NETWORK

EMEN - the Emergency Management Education Network - is a Web-
based resource that addresses a broad range of issues regarding
emergency management, including business continuity and disaster
recovery. Developed by the University of California Extension,
Riverside, which offers courses in these fields, EMEN offers in-depth
information for interested laypersons as well as emergency management,
business continuity, and disaster recovery professionals. It also
provides links to information about what lessons have been learned
from previous disasters, what approaches are being taken by various
organizations to lessen the impact of disasters, and ideas for the
future from academia, professionals, and the public-at-large.

http://www.unex.ucr.edu/EMEN/EMEN.html

-Disaster Research
.....

This week's EMCOMM Bulletin:

EMC121 Unit Priorities 2/3 For release 3/2/98

Although speaking to their city RACES unit, this can apply
to any EMCOM unit serving government. Continuing:

"Step Three - Setting Priorities: What exactly are the RACES
Priorities?

1. Assess the damage all around you and as you are responding.
Take notes of any emergencies or damage. Report major damage.

2. Net Control - The RACES Management Team will respond to
the EOC and start running Net Control. Net Control Training
will be provided later this year to the senior RACES officers.
Running Net Control operations for 3-4 days straight will take
dozens of trained personnel. We need to get a large group
trained to cover any contingency.

3. Backup Fire Police, Public Works and Marine Safety radio
systems. We have to keep public safety officers responding
to emergencies no matter how bad the disaster. If the
public safety systems fail, all response could stop without

backup communications from RACES. (This shows you how very important the RACES is to the City.)

4. School District EOCs, public and private schools - If phones systems fail or are overloaded, which is likely to occur in the initial hours of a disaster, RACES is the only communications link to over 25,000 children who may need help. Add in Golden West College and you are talking about 40,000 students. RACES will dispatch personnel to the 1) HB Union High School District (8800 students), Ocean View School District (7450 students), HB Elementary School District (6000 students), and Fountain Valley School District (1650 students within HB). There are three Westminster schools in Huntington Beach: Clegg, Stacey, and Schroeder Schools. There are 14 private schools and over 29 preschools. Private schools have been given the RACES frequencies and are expected to provide their own Amateur Radio operators. But we have to handle their radio traffic.

5. City Facilities - We have radios in most of the 22 city facilities. However, there are two facilities with large populations that have no radios. We provide communications for the Central Library and Senior Center.

6. CERT Neighborhoods - There are presently 46 CERT Neighborhood Teams within Huntington Beach. Our goal is to train a minimum of one team per RD (a Reporting District is a 1/2 mile square). There are 133 RDs in the city so CERT has the potential to overwhelm our RACES system. This is why we have placed a CERT Area Communicator in the North and one in the South end of the City. These are RACES Operators and you may be called upon to handle North or South CERT traffic. They operate on XXXXX Simplex. The two RACES officers with this job will have to filter the information they receive and pass on ONLY the important radio traffic. How bad the emergency is will dictate what is considered important radio traffic."
(Continues next week.)

FOR SALE: Yaesu FT-50R Dual Band Handheld (Fully modified)

$225 obo (see what's included free below)

This radio has had the Ultraband mod performed allowing for amazing Rx and
Tx ranges, the best of any Yaesu modification.
Visit http://www.yaesu.com/ft50.gif for a picture of this radio.

Features:
-Fully modified!!!
-Great condition, rarely used
-Wide Multi-band Receive for the scanning enthusiasts 76-520, 540-999 MHz
(including Cellular)
-3-Selectable Rx modes (AM, FM-Narrow, FM-Standard)
-Rugged MIL-STD 810 Rated for Shock and Vibration
-Auto Range Transpond SystemTM (ARTS) uses DCS to automatically poll other
stations, indicating if they are within simplex range
-Digital Coded Squelch (DCS) is used in the commercial industry, DCS
provides 113 unique codes in addition to the standard CTCSS tones
-112 Memory Channels each stores offset, CTCSS/DCS & power level
-Alpha-Numeric Display up to 4 characters may be used to name each memory
channel
-Digital DC Voltage Display monitors current battery voltage
-Full 5 Watts of Power Output with 4 selectable power levels
-Automatic Tone Search (ATS) scans for DCS and CTCSS tones
-Receive and Transmit Battery Savers built-in
-ADMS-1C® Windows® PC Programmable (see below)
-Keyboard and Menu Programming allows for simple FT-50R operation

Included FREE:
-AC Adaptor
-Screen and keypad protector case
-All original documentation, labels, and box (including warrenty)

Also for Sale for use with radio:
-ADMS Software Package (includes cable and software) ($100 obo)
I would suggest this addition to your radio. It allows for the greatest
flexibility.

How about having Advanced and Extra awarded to people who have demonstrated that they have advanced knowledge of "the radio art". For example, designing and building a transmitter or receiver that differed in some significant way from previous published designs?

They would then be honorary degrees that actually conferred some honor.

If the HT is generating 5 watts of RF, it's probably dissipating at
least 5 watts, probably more, in the power amplifier. Any HT is going
to get hot if you talk for a substantial length of time at that power
level. The 202 is probably better than most, because it has more mass
to spread the heat around. The newer tiny handhelds have little
mass, and no external metal to dump the heat into the air with.

On (Sat 28 Feb 1998) I had a QSO with UK Radio amateurs who
were happily sending packets to USA, to telnet to a group who included
a USA amateur who was in the same group - but using a regular ISP
internet connection!

It seems the guys who set up this "net" issue their own internet ID
number sets (the famous sets of digits separated by fullstops), except
the first number is 44 (instead of a 3-digit one). The "44" signifies
a amateur packet connection, and such an ID should not pass through
a server here as if it were a regular internet packet.

I tried telnet into this packet server, but I must have done it wrong.
My ISP accepted the address, but failed to connect. I freely admit
there is just so much I don't understand about how this is done. I
think that launching a packet to a US station by amateur radio
is unlikely to be illegal here, just because some other users of that
station happen to send their stuff via an internet route..

While this subject is interesting enough to roll up unusual numbers
of postings, I have got to admit that it is probably in the wrong group.
I'm not fussy or pedantic. Say it here if you like - but you may
expect some flak eventually from the net "hobby bobbies".

I took a survey of members in the local radio club and found
that the most requested subject for a class is Morse Code!

In recent years, there have been a number of new computer programs
and other study materials for learning Morse Code. Comments on
which ones might be recommended or not recommended would be much
appreciated.

Please let's not get into about why someone might want to learn
this particular skill.

WANTED: AN-USN-118B Military Cardmatic Tube Tester with the
usual cards & accessories that went with it.

Willing to pay reasonable price for your tester or swap for
Hewlett Packard Laserjet II, 8 Pages Per Minute laser printer.
This printer is one of the best, most reliable and economical
laser printers that Hewlett Packard ever made and is still highly
desirable today. It has a low number of copies on it for its age.
I do not wish to sell the printer outright, but rather swap for
the tube tester I want.

Will provide details of the above printer if you're interested in
same.

Thank you.

2986. Amplifiers for sale...

From: wizard@eskimo.com
Message-ID: <34f8ad4e.2915170@eskinews.eskimo.com>
Source record: 176972

Amplifiers for sale.....

600W PEP, 400W continuous, wideband, class AB linear amplifier usable from 15-150 Mhz. Single drawer unit includes Kilovac COR switching, adjustable time delay, and accessory switching. Amp utilizes a wideband splitter/combiner combo, auto bias switching, thermal protection, and uses MOSFET transistors. Amp delivers extremely clean signal and is overdesigned to provide 100% duty cycle at 400W. Requires 28VDC @ 70A peaks for a power source. Asking $500 or best offer. I would also consider a trade for a solid state HF transceiver.

250W HF solid state base amplifier with power supply, receive preamp, and COR circuitry. $200.

100W Continuous duty wideband amplifier module usable from 400-1000Mhz. Capable of over 150W on 70cm. Requires 28VDC power source. Asking $300 or best offer.

If interested, please reply via E-mail at wizard@eskimo.com

>Spam proofing.

Not your sig, Miss Insult Queen. I mean in your posting address. Two examples are underlined above. I've seen at least three others. The only explanation I can think of is that you're a spammer yourself, and are doing this to avoid killfiles. For spamproofing purposes, there's no need to keep changing the fake characters. In fact, there's no reason to use _any_ sort of valid address there, at least at most ISPs. You can use your sig file for letting folks know where to mail you.

Fortunately, once I have determined what the deal is, I can take appropriate measures.

As for your sig, it's often way too large and too confrontational to be used in an informational/tech newsgroup such as this.

: Anyone know where i can get the TapeTenna? Appreciate your help.

Collins put out a "tape tenna" a while back. It was like two rolls of steel measuring tape, marked with lengths and a frequency chart, and "N" connector inside of a black plastic box. You'd reel out 32 ft per side for 40 meters, attach coax and hang it in a tree or whereever. I had one, lent it out and never got it back, that I got someplace (hamfest?) for ten bucks. They were built for the military and were part of the KWM-2 deployable suitcase package.

You might try some Collins parts place, like the one in the midwest, or a large hamfest.

>----================================

Although I already knew the code, I used Morse Tutor Gold to build my speed when I decided to get relicensed after 30 years. It generates VE exam type QSOs and runs on DOS, so you can use it with even the most obsolete PC. It also gives lessons in learning characters, of course.

Although I never used it myself, Code Quick gets mixed reviews in my book. Recently, I was in contact with a Tech who was trying to use it to learn CW. The word association was mixing him up. For example, the letter C is taught as "Catch it Catch it" (which is supposed to be "dah-dit-dah-dit", but this fellow interpreted it to mean "dit dit (pause) dit dit". When he went to send CQ, it came out as "IIQ". He was relying so heavily on the word associations that he never actually saw or heard what a proper C was supposed to be.

I think you want to teach characters in groups, such as "E I S H", "T M O", "A, W. J" "N. D. B", etc. based on their similarity. Also, use the Farnsworth method.

Finally, once they know the characters, there is nothing like real world listening to well sent code involving real words. If W1AW can be heard well in your area, its code practice transmissions are terrific.

Just my opinion,
Ray K1XV

Sure. There are many adults. Post something related to amateur equipment, operating, public service, etc., and you will get adult responses.

Read posts by burt, cb rambo, and those who choose to respond to them, and you will find the childish side of the NG.

Hi.

Have you been running it on high power on 12 or 13.8v? A common
failure in the HTX-202 is overheating of the final transistor when
doing this, and after a while it partially melts the solder
connections on that transistor, and it becomes intermittent (or stops
working completely).

Can you hear the signal on another HT or 2m rig that is nearby (within
a few feet)?? If so, I'd bet the overheating and partly melted solder
is your problem.

The cure is to VERY carefully resolder the connections on that final
transistor. If you aren't comfortable working on it, get someone to do
it for you.

Re: the "heating up" of the HTX-202 after extended periods of TX.

This is a common problem with these radios. Make sure your heat sink (a/k/a "belt clip") is connected. Also, try to use low power whenever possible. Not only does it keep the radio from heating up, it also conserves battery power and fufills the amateur requirement that you use the "minimum power necessary" for effective communications.

3002. 10 meters open on Sat, Feb 28, 1997

Anyone else spend the day on 10? The band was wide-open; better than I've experienced in several months. From the east coast of the U.S. to Sao Paulo, Brazil, to Hawaii. Made several contacts in the Novice/Tech-Plus voice portion of the band with my barefoot 2510 and a Solarcon A-99, barely 40 feet in the air. Hawaii was particularly strong in the early evening hours; several Hawaiian stations around 28.350-28.400 were making contacts from Wyoming and Colorado all the way to the east coast. Hopefully, we'll be just as blessed today. What a great hobby!

3003. RECALL OF NLI SECTION MANAGER, KE2LE, BALLOTS MAILED

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-01 00:00:00 UTC
From: notme@127.0.0.1
Message-ID: <6dbsc0$806$1@newstand01.iconnet.net>
Source record: 176989

Visit http://www.ab2m.net/recall.html for more information..

An effort has been undertaken to remove Len Buonaiuto, KE2LE, from his position as Section Manager of the New York City/Long Island section of the ARRL. We believe that KE2LE's mismanagemnt of his office and his damaging actions warrant this strong action. This page has been
designed to show you the reasons behind this effort so that you may decide for yourself if KE2LE
should be removed.

VOTE "YES" FOR THE ARRL/NLI SECTION MANAGER RECALL

You will soon receive a ballot from the ARRL asking whether to recall the New York City/Long Island
(NLI) Section Manager, KE2LE. Consider the following when you make your decision.

When he ran for Section Manager, and in the Section News column of QST following his election,
KE2LE spoke of a need for change. Unfortunately, the most significant change since his election
has been conflict and discord produced by an arrogant Section Manager who has ridiculed the ARRL, and either
disregards or is inexcusably ignorant of ARRL Field Service requirements and procedures.

KE2LE is not meeting the requirements of his position as required by the Rules and Regulations
of the ARRL Field Organization.

Consider the following, all contrary to the ARRL Field Service rules and practices:

A. KE2LE has failed to submit material for the QST Section News column at least twice (ARRL FSD 128 para f).

B. KE2LE has attended only one of the three Hudson Division Cabinet meetings that have been held since his election (ARRL FSD 128 para d) and he has failed
to attend any of the Club Presidents meetings (ARRL FSD 128 para e).

C. KE2LE has attended few, if any, local club meetings in Suffolk, only one in Nassau and none in New York City (five counties KE2LE ignores completely). He neither visited any Field Day sites nor appointed a representative to do so. He has attended only one hamfest (Radio Central) in his capacity as Section Manager, visiting others inconspicuously without
presenting himself to the sponsoring club as the Section Manager (ARRL FSD 128 para e).

D. KE2LE has severed communications with the Hudson Division Director, abandoning his obligations to keep the Division Director apprised of Section activities (FSD 128 para d).

E. KE2LE has made himself inaccessible to Section members, failing to return phone calls or reply to e-mail, and returning Postal mail unopened. (ARRL FSD 128 para d and g, and ARRL "Section Managers Survival Guide" page 5-1, para 5.2).

F. KE2LE has attended only one of five tower hearings for a local ham in his own town of Islip (FSD 128 para d).

G. KE2LE has crippled a previously well-functioning NLI field and emergency-preparedness organization, and upset delicate political relationships with the agencies we serve, by eliminating staff positions or removing respected appointees who have given years of exemplary service. Many others have submitted their resignations in frustration. (This is in complete disregard to ARRL's "Section Managers Survival Guide", page 4-2, para 4.3).
KE2LE is not known to have ever actively participated in any public service events in the section himself.

Prior to KE2LE's election, the NLI Section had been developing good working relationships among its members, as evidenced by the large turnout of NLI members at the Hudson Division picnic last summer. Over 300 people attended. KE2LE, the NLI Section Manager, was not among them, further removing himself from contact with the membership.

KE2LE has reacted to the effort to remove him from office by making harassing and threatening phone calls to some of the concerned Amateurs who signed the recall petition. Instead of mustering support for his position he has attacked others, blaming them for the problems he has caused.

KE2LE's public writings (as evidenced by his letter to the Hudson Loop and the six page incoherent letter that he sent to NLI members) are filled with grammatical and spelling errors, which are also present in his correspondence to appointed and elected officials. This undoubtedly has a very negative effect on the official's image of the ARRL and it's programs.

The NLI Section deserves better.

YOU deserve better.

Return your ballot with a "yes" vote to indicate your desire for a new NLI Section Manager.

If the Section membership votes for a recall, a new Section Manager will be appointed to fill out the remainder of the current term. The appointment will be made by Rick Palm, the ARRL Field Services Manager, after consultation with the Hudson Division Director and NLI leadership.

I have an idea here: instead of responding to these troublemakers, why not just ignore them. Remember the playground bully from first grade? If you ignored him, he'd go away and tease someone else. Same theory applies here. Better yet, let's take their inflammatory postings and turn them into a positive commentary on ham radio. Offer to help them become new hams, or to upgrade if already licensed. Kill 'em with kindness.

> What else do you get when you upgrade?

Hi John, I upgraded to Extra from Technician back in 95. I did it just because it was there, I never use any of the privleges I earned. Most of the time I talk to some people here locally on simplex 146 mhz. That's about it for my radio activity right now. Was it worth the upgrade? Depends on how you look at it. Once you do it, you will be done, no more upgrades needed. You can be a VE and test up to Extra with two other Extras. Otherwise, I don't know what else to tell you except "I did it". What little I use the radio I could have remained a Tech. forever. It's all a matter of what you want to do. If you really hf and code and what not, go for it. Perhaps you just want to get it done like I did.

Cheers!

Joe

I don't remember a CW only transceiver, though your post makes me wonder
if I've forgotten something.

Could your friend have been talking about the separate transmiter/receiver
from the early days of Drake, and not a transceiver? I guess it was the
2-NT and the 2A or 2B?

Drake also at one point made a "reciter" (I think that was what it was
called) that was the transmitter in the T-line without a VFD, meant for
use with the receiver in the R-line.

With a stable BFO like 390 has, tuning on SSB or FM is not much of a
problem. Ever heard of slope tuning? We used to do it B4 product
detector ckts came out. I used to use 390, 392, SP-600, etc back in the
'60s. The good old days!

>
>
This is a good point. I'd like to add that besides posting to this newsgroup, where people already knowing about amateur radio can learn more, and those of us licensed can get ideas from other areas, announcements of upcoming events really ought to be posted to local newsgroups as well.

This will reach the audience that has yet to learn about amateur radio, the peeople who don't yet know about the hobby. If posting to local newsgroups, it would make sense to include the url of the local ham club or clubs, the national group (such as the ARRL in the US, RAC in Canada, etc), where presumably additional information about amateur radio and country-specific information can be found, and a brief introduction to the hobby. They won't go looking at a url if they have no idea what it's about. Posting an announcement about a hamfest will attract the attention of the local hams (and I've been in the position from time to time of missing a local hamfest because I didn't know aobut it), but you really need to include an explanation of what a hamfest is, fo those who have no idea what a hamfest is. The hamfests that I've been to in recent years have tended to include computer equipment, so that too is a draw to get people to the hamfest, where they can hopefully find information about the hobby.

When you've been a part of something for a while, you forget what it's like to not be a part of it. It's hard to remember what it was like before you knew about ham radio, yet it is to that audience that you have to convey the hobby. Try to remember those days long ago when you already knew about the hobby, but didn't know any local hams or about the local clubs. Think about the difficulty you might have had trying to find your way into the hobby, and try to make that parth simpler for those who come after you.

One of the interesting things about the internet is that it is a very distributed network. Often, when events are planned the word does not get out very well, beyond the people who already know about it, and probably least need to know (I'm on emailing list from one of the local clubs; one time I received an announcement for a code class, more recently for a class leading to the Basic license, neither of which can

interest me since there's no where up on the license structure that I can go, but the announcements should have been out in the world on the local newsgroup). If posters are printed up, often too many of them remain after the event, a victim of nobody to put them up. Too often, few beyond the core group know about those posters, and not enough people come in to get some to put them up. The internet changes all this, because each person who reads the message and has a printer has the ability to print out the announcement a few times, and stick them up on the local bulletin boards, often found at places like the library, the ham store, the local grocery store, Ben & Jerry's, etc. It's not a slick poster, but it sure is better than nothing. When it's that easy for people to get the "posters", perhaps more people will take the time to put up a few, and hopefully the posters will reach a much wider readership than if a handful of people in a central area take care of postering. If you want the "posters" to stand out more, you can take some colored markers and put a title at the top in big letters.

In article <6d1u54$p8q$1@nnrp1.dejanews.com>, <K0HB@USA.NET> proposed changes to ARS testing:

>(Credit-where-credit-is-due-Department: These ideas are modeled largely after
>the work of Director Tod Olson, K0TO, of the ARRL Dakota Division, and his
>WRC committee.)

Did anyone else notice that the 4 or 5 people who voted for the proposals for rules changes at the January ARRL Board meeting, were the same folks who did the vast majority of the other work (aside from the committee reports) at that meeting? It seems that the Directors and Vice-Directors who contribute the most to the ARRL board, are also the ones working for change. It is the vast majority of non-contributors who are standing, no, sitting in the way of progress.

I suspect Hans, and some others who work closely with the ARRL Board are too considerate of their associates to direct proper criticism toward the appropriate individuals. It would be bad form.

The thankless work of the few dedicated radio amateurs on the ARRL Board who are committed to meeting the changing needs of the service was not lost on this writer. My thanks go to them. Please keep up the good work. My advice (make that a request) would be next time use Hans' proposal as the model.

I think some the problem is the class warfare in this country. If we looked at those individuals that seem to break the rules, my guess is that it would be the those folks who are smart but never went to college. They are being left behind and resent those who are educated.

But the uneducated classes seem to be most of the problem. Most of the smokers in America are in the bottom fifth of society. Our problems with guns is our distrust of the working class rednecks and poor blacks. How is afraid of someone who has a masters with a gun? Most of the very over weight are poor. Plus the uneducated consume more "toys" than the educated.

We are becoming two Americas. One educated (professional class and ruling class), the other uneduacated (poor and working classes). Even the military is very educated with the average NCO having a college degree and Officers having a Masters. The same with law enforcement. Without either college or training in a skilled trade, you will get left behind. Which might expain the paranoia in our country.

Look, if you have post high school education, you have more to lose therefore you are less willing to break the law over minor things (most educated guys do white collar crime which pays very well!). I would think that those who are screwing around in radio (ham, CB, scanner) have little to lose, are smart and are somewhat pissed at not having made it in our society.

3015. Re: Canada - On Open Spark!

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-02 00:00:00 UTC
From: Michael Black <blackm00@CAM.ORG>
Message-ID: <Pine.GSO.3.94.980302003021.17692B-100000@Stratus.CAM.ORG>
Source record: 176844

Fred Hammond has a radio museum in the Toronto area, made up of his own collection of radio equipment. Someone I know visited it a few years ago, and was quite impressed.

The museum has a website, at
Hammond Museum of Radio Home Page
URL: http://www.kwarc.on.ca/hammond/
Though it seems to be more about equipment, it is one place that might be a depository of historical information.

There are some chapters of the Quarter Century Wireless Association (QCWA) in Canada, and they too might be a place to reach oldtimers.

The Ottawa chapter has a webpage at
http://www.teleport.com/~qcwa/qcwa70hq.htm

The QCWA has a webpage (at http://www.teleport.com/~qcwa) and in it's list of local chapters at
http://www.teleport.com/~qcwa/chaplist.htm
two or three other Canadian Chapters are listed, though without webpages.

Just since your post, I came across a review in a 1968 QST for a book that I once read, though I don't remember any details. It was called "From Spark to Space: The Story of Amateur Radio in Canada" published by the Saskatoon Amateur Radio Club. I doubt you can buy a copy from them after thirty years, but the club does have a webpage at
http://www.sfn.saskatoon.sk.ca/recreation/hamburg/hamsarc.html

Those are the only pointers I can think of right now. I'm not old enough to have been a ham, or even born, during the years you are interested in. Sorry.

I imagine this means it will no longer have the severe Part 15 limits.

Let's see, the first thing to build will be a full-wave loop antenna. =:o

: devices will help. URLs or schematics.... anything..

Daryl:
Your cat is posting to rec.where.is.owner and says that you are staying out too late on club meeting nights. Cat wants to know how to activate your handheld remotely so you will know to come home.

This may be the same cat we are hearing on 75 Meter SSB on the first Tuesday of each month. Can you disable the HF rig when you leave the house? Thanks.

The Man in the Glass

When you get what you want in your struggle for Life
And the world makes you king for a day,
Just go to the mirror and look for yourself
And see what that man has to say.

For it isn't your parents, your children, wife or friends
Who judgement upon you must pass.
The fellow whose verdict counts most in your Life
Is the one staring back from the glass.

Some people may think you're a straight-shooting chum
And call you a wonderful guy.
But the man in the glass says you're only a bum
If you can't look him straight in the eye.

He's the fellow to please, never mind all the rest,
For he's with you clear up to the end.
And you've passed your most dangerous, difficult test
If the man in the glass is your friend.

You may fool the whole world down the pathway of Life
And get pats on your back as you pass.
But your final reward will be heartaches and tears
If you've cheated the man in the glass.

HTs are designed with a 10% transmit, 90% receive duty cycle
intended. Their battery life is stated in those terms, and their
thermal design is also in those terms. Some of today's mobile
and base radios also have their thermal systems designed in
those terms. If you want to use a heavier transmit duty cycle,
you need to shop carefully for equipment with more robust
thermal design, or modify the equipment to increase its thermal
margins, IE bolt a big heatsink to the back of that HT.

That might be true to those whose only claim to competence is the
ability to decode Morse. Sad if true, of course, since there is much
more to amateur radio than the ability to decode Morse. But it does
seem true that there are a number of amateurs who are amateurs
only in the sense of CBers who beep.

Has anyone tried and/or had success with the hypnosis Morse tapes from Alternative Arts (http://www.qth.com/cweasy/)? I've already gone the full distance for my full VK licence, but I have an interest in the learning method this company espouses (using Neurolinguistic Programming).

Any comments would be most welcome (and no, I'm not posting this to promote the company - I've had no contact with them)

3026. NO-CODE INTERNATIONAL FOUNDER SPEAKS OUT AGAINST NO-TEST FOLKS

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-02 00:00:00 UTC
From: Perens@Hams.com
Message-ID: <6de3na$9fm$1@samba.rahul.net>
Source record: 176855

NO-CODE INTERNATIONAL FOUNDER SPEAKS OUT AGAINST NO-TEST FOLKS

I am Bruce Perens K6BP, founder of No-Code International.
I've been contacted a number of times by people who claim that Amateur testing violates your right to free speech. For some reason these people are also characterized by their use of offensive language on the net. They show a very poor understanding of the constitution and law in general, and should be ignored. That's how I've always treated them. The key fact is that the right to free speech does not obligate the government or anyone else to provide you with a _pulpit_, be it Amateur Radio or any other form of publication.

My purpose in founding No-Code International was not to dumb down the Amateur service as these people would do. Instead, I propose to replace obsolete elements of Amateur testing (CW) with more up-to-date ones, such as additional exam elements on theory or operating ettiquette.

I've stayed off of net discussion groups such as rec.radio.amateur.policy for years, because of the small population of clueless individuals who ruin these groups for everyone. Do not believe claims that these people will mount a legal challenge of Amateur testing. None of them has the mental ammunition necessary to write an effective FCC filing or the funds to operate the lawsuit they propose.

If you want to see how _responsible_ people work to change Amateur Radio Policy, check out www.nocode.org or get one of my recent FCC filings from the people at ARRL with whom I work on various Amateur issues, like Director Brad Wyatt. Don't concern yourselves with net.nut-cases .

Thanks

Bruce Perens K6BP

Indeed, only 1350 feet on a side! A friend and I were at a hamfest
in February, and he bought a "half mile o' wire" used for military
field telephones.

It was actually two-wire line, and we hypothesized doing the "zip
cord" thing on it and making it instead a "mile o' wire..."

Which it seems we could REALLY use, given the property.

>-art clemons-

What is it, Art, that you 'hear' these contesters and DX'ers doing that
is a rules violation ? Getting better signal reports than you do ?

I sorry, but I think have to disagree with your emphasis that MOST hams
are law abiding. In my opinion, a FEW are. Most hams can't wait to get
hold of the MODS to make the new radio transmit other than on the ham
bands. While trivial, maybe, this isn't exactly 'law abiding'. I've seen a
pile of QSL come thru the QSL bureau here that shows me that MOST
techs who have an HF rig can't resist the urge to get on 15 or 20 meters
and make a few SSB contacts, license or no. Not the same as murder,
but not exactly 'law abiding' either.

I think the sad fact is that a) this is 1998, b) we all know damn well the FCC
enforces nothing and c) people don't seem to have the same 'respect' for
things they used to have respect for: people in police uniforms, senior
citizens, and ham licenses.

Those of us who operate on HF know what the power limitations are now -
'run what you brung'. It's assine to assume that giving someone 200 watt
power limitations is going to keep them honest - besides, it goes against
Han's ghetto policy.

As for the problems you hear on 20 and 75 meters, get an antenna up so you
can hear somewhere besides the east coast - 20 and 75 meters are just
normal ham bands for the rest of the world - you specialize in idiots in your
neighborhood.

Rumor has it that there is a RX mod for the new ICOM T8 (tri-bander). Supposedly, you press 2 buttons while powering up and this opens up the RX of the HT. Anyone know of this? Also, any mods out there to open up the TX capabilities? Please help. Thanks.

Source record: 176863

I also used the Gordon West tapes to learn the 5wpm rate, I was somewhat dismayed to find the code test sent fast (farnsworth) which was not the way it was sent on the tapes - oh well. I did not use these tapes for the 13wpm because I did not want to learn 'slow' code.

I then moved on to Jerry Zilliak's Radio School tapes. Which take you from nothing to 23wpm. These are very good in that they teach you fast code. He also sends the text of the practice sessions backwards - so it is impossible to memorize, nice touch, nice tape set.

As added instruction I've been using the ARRL CD's for 10-15wpm (which got me from tech+ to advanced) and am now using the 15-22 for my extra. I just wish the ARRL CD's sent the text backwards so you couldn't memorize it (except for some sample tests). Although at 20wpm it sure is nice for the text to be forward so you can fill in all the blanks-hihi!

The CD's are the format to use, you can instantly go from track to track. Do you know how hard it is to find a specific code practice session on a tape when your little counter isn't set right?

I have tried a couple of computer programs, specifically for the 5wpm when I was getting started and I had no luck at all with them.

As much as I hate to admit it, the brute force method has worked best for me. I pick a speed, fire up the CD player and just start copying - I do this over and over and over again.

Hi Jim,
Sure there are!. Sadly we have our fill of trolls and others who seem to have no other life other than getting their jollies off by spouting off and flaming on the group. But you will find that on just about every non moderated newsgroup. Just learn who they are and kill file or skip past them. There are many posters here who contribute things other than spam.

Enjoy.

I also heard that last night and then read it today. IT'S ABOUT TIME!!!!!
Sue their butts off the air.
And if they violate part 97 Fine their butts off the air and take their gear.
I will definitely support them!

Did you note the tone of the last couple of newslines. It looks like the hams
are not the only ones getting tired of the illegal garbage on the air. NAB is
taking a hard line stand and a radio Pirate was busted for severe interference
on a air control frequency.

Hmm. First, Kelly, please tell us whether you have a helicopter or an
airplane style headset. The microphone interfaces are different.

Airplane microphone standards were set in the old carbon microphone
days. They require a DC voltage across the mic. These days, a
headset for airplane use usually has an electret microphone. The
headsets for Helicopter use usually have unpowered microphones.
They're typically dynamic.

Second, the presence of voltage on the mic lead alone is not
necessarily what makes things messy. After all, you could easily
install a battery inside the adaptor jack and a capacitor to block the
DC from the radio.

As for a source for the mic jack, check out Sporty's (1-800-LIFTOFF). Sporty's is not usually the least expensive place, however they're usually pretty quick about delivery. Otherwise, check out a military surplus electronics store.

Good Luck.

It is 100% law abiding. The law is ONLY broken if the
ham transmits outside of the ham bands. It has only
been the advent of digital synthesized frequency control
that has provided a software controllable means to limit
out of band transmission. That the software is easy
to modify by usually cutting a diode or two does not
make the provider or user of that information illegal.

I suspect the reality is that most hams don't even have linears
anyway. Most hams operate their 100w transceivers and never
even consider getting a linear. I could be wrong, but you have
no statistics to prove your point either.

Please find below the listing that you requested:

The following is a list of Electronic Equipment, some Reference Standards, and some Ham Gear that are FOR SALE. This equipment is being made available on a first come, first serve, basis.
All operation and service/maintenance manuals as well as historical data pertaining to their certification history and traceability will be provided on items where applicable. No warranties implied. Offers are being considered. Buyer is responsible for all packaging costs, handling and shipping
charges/expenses.

Contact: Dr. Gar Won Ko at (316) 651-5050 or garwonko@msn.com

1.) Hewlett-Packard Model 10543-60010, Quartz Oscillator, 5 MHz, utilized in
many of the Atomic Resonators, e.g., 5062C, 5065, 5060A, and 5061A Cesium Beam/Rubidium Gas Frequency Standards. This metal can oscillator is brand new and in its original HP box.

Condition: Excellent (new in HP Box) Price: $ 850.00

2.) Smith-Florence (Honeywell) Model 951, S/N 150, Precision Potentiometric Micro-Voltmeter and Nullmeter.

Condition: Good Price: $ 250.00

3.) Fluke Model 873AB, S/N 351, AC/DC Differential Voltmeter/Nullmeter, 0 to 1100 Volts AC/DC, +/- 0.02% DC and +/- 0.2% AC.

Condition: Fair (needs repair) Price: $ 100.00

4.) Hewlett-Packard Model 415E, S/N 719-02825, SWR Meter with 60 dB attenuator. SWR and dB scales for use with square law detectors. 1 kHz input frequency.

Condition: Excellent Price: $ 400.00

5.) Tektronix Model 107, S/N 001824, Square-wave Generator and Risetime Source, 3 nS risetime, squarewave amplitude from 0.1 to 0.5 volts into 52
ohms. Frequency range from 0.4 to 1 MHz.

Condition: Good Price: $ 150.00

6.) Tektronix Model 105, S/N 2002, Square-wave Generator, Frequency range from 25 Hz to 1 MHz. Output amplitude from 0 to 100 Volts into 600 ohms with

less than 15 nS risetime.

Condition: Good Price: $ 125.00

7.) Tektronix Model 114, S/N 1751, Pulse Generator, 10 nS Rise/Fall time, 10 Volts output into 50 ohms. Variable pulse period from 100 nS to 10 mS, Duration, with + and - output polarities.

Condition: Good Price: $ 225.00

8.) Hewlett-Packard Model 412AR, S/N 3858, DC Vacuum Tube Voltmeter, built-in probes, manual, and rack mountable.

Condition: Fair Price: $ 60.00

9.) General Radio Model 1605-A, S/N 891, Impedance Comparator.

Condition: Fair Price: $ 50.00

10.) Tektronix Model 190B, Constant-Amplitude Signal Generator with signal/power attenuator.

Condition: Excellent Price: $ 125.00

11.) Eldorado Electronics Model 1607, Frequency Counter/Timer, 0 to 25 MHz in frequency counting mode, 0 to 2 MHz in period measurements (4 ranges),
1.0 uS to 9,999,999 uS in time interval measurements.

Condition: Good Price: $ 125.00

12.) Hewlett-Packard Model 5210A, S/N 1136A02048, Opt. 001, Frequency Meter.

Condition: Good Price: $ 150.00

13.) ARC (Aircraft Radio Corporation) Model H-16, S/N 430, Standard Course Checker, VOR Modulation, with Model P-11, S/N 606, Power Supply and interconnecting cables.

Condition: Good Price: $ 150.00

14.) Hewlett-Packard Model 7030AM, X,Y,T Plotter with time base.

Condition: Fair Price: $ 175.00

15.) EICO Model 235, VTVM, AC RMS and P-P Ranges, Resistance and + and - DC Volts including a 0.5 Volt DC F.S. range, probes and manual.

Condition: Good Price: $ 75.00

16.) Tektronix Model 7A13 Differential Comparator Plug-in for 7000-Series Display Mainframe. Mechanical Readout.

Condition: Excellent Price: $ 300.00

17.) Hewlett-Packard Model 400EL, S/N 536-04003, RMS AC Voltmeter, Analog (average responding) meter with 12 ranges from -60 dB to +50 dB or 0.001 to

300 Volts RMS, 10 Hz to 10 MHz.

Condition: Good Price: $ 250.00

18.) Systron-Donner DataPulse Model 101, Pulse Generator,

Condition: Good Price: $ 275.00

19.) Fairchild (Electro-Metrics) Model EMC-10 Electromagnetic Receiver and Interference Analyzer. 20 Hz to 50 kHz.

Condition: Good Price: $ 350.00

20.) Fairchild (Electro-Metrics) Model ESC-10A, Scan Control Head. Used with EMC-10 listed above.

Condition: Good Price: $ 100.00

21.) Tektronix Model 184, S/N 1490, Time Mark Generator for calibrating oscilloscopes. 21 Markers from 2 nS to 5 Seconds, 1 Volt output into 50 ohms, 7 triggering times selectable with its own output into 50 ohms. stable
oscillator as time base.

Condition: Good Price: $ 350.00

22.) Hewlett-Packard Model 8553B Spectrum Analyzer RF Section,
0 - 110 MHz.

Condition: Good Price: $ 450.00

23.) Hewlett-Packard Model 8556A Spectrum Analyzer LF Section.
0 to 30 kHz and 0 to 300 kHz.

Condition: Good Price: $ 550.00

24.) B & K Model 1076 Television Analyst (Flying Spot Scanner).

Condition: Good Price: $ 75.00

25.) Gould-Brush Model Mark 280, 2-channel strip chart recorder,

Condition: Fair Price: $ 150.00

26.) Hewlett-Packard Model 606A, Signal Generator, VLF/LF/MF/HF/VHF, 50 kHz to 65 MHz, -110 to +20 dBm, 1 microVolts to 3 Volts,

Condition: Good Price: $ 425.00

27.) Hewlett-Packard Model 197A, Options 001 and 008, Display Camera Assembly.

Condition: Good Price: $ 175.00

28.) Hewlett-Packard Model 197B, Display Camera Assembly.

Condition: Good Price: $ 225.00

29.) Hewlett-Packard Model 2401A, S/N 444-01493, Integrating Digital Voltmeter, Rack mountable.

Condition: Good Price: $ 150.00

30.) Victoreen Guarded 10 MegOhm Standard Box, +/- 0.25%, with Triax Connector,

Condition: Excellent (newly constructed) Price: $ 150.00

31.) Hickok Model 14, 0 to 30, 0 to 300, and 0 to 3,000 milliAmpere DC meter, portable with handle.

Condition: Good Price: $ 50.00

32.) General Radio Model 1558-A, S/N 134, Octave Band Analyzer (OBA), measures level in 10 octave bands. Manual included.

Condition: Good Price: $ 50.00

33.) General Radio Model 1307-A, S/N 816, Test Oscillator with Model 1552-B Sound Level Calibrator for calibrating item #72 (Model 1551-C SLM) listed above.

Condition: Good Price: $ 50.00

34.) Hewlett-Packard Model 423B, S/N 1822A10811, Low-Barrier Schottky Crystal Detector, N-male connector on one end and female BNC on the other end. Frequency range = 0.01 to 12.4 GHz.

Condition: Excellent Price: $ 100.00

35.) Conrac Model RND-9, 9-inch High Resolution Monochrome Video Monitor, all solid state.

Condition: Good Price: $ 75.00

36.) RCA Model PXB-8, 8-inch High Resolution Monochrome Video Monitor, Vacuum Tube design.

Condition: Fair Price: $ 25.00

37.) Hewlett-Packard Model 3722A, S/N 943-00520, Noise Generator, providing two types of random noise outputs in binary signal and a continuous analog waveform of approximately gaussian amplitude distribution. Also, this unit generates pseudo-random versions of the binary and gaussian signals. This HP3722A is a low-frequency broadband noise generator designed primarily for the simulation of random disturbances, as in vibration analysis utilizing
a shaker table and accelerometers. A calibration signal source for a sound and vibration test bench would be another use and application. Brain wave noise-masking generation would be another use. Complete with manual and power cord.

Condition: Excellent Price: $ 950.00

38.) Micronta Model 22-211, Volt-Ohm Meter, 20,000 ohms-per-volt DC and 10,000 ohms-per-volt AC.

Condition: Excellent Price: $ 35.00

39.) Hewlett-Packard Model 350A, Decade Attenuator, 500 ohms impedance, 110 dB dynamic range, 5 watts.

Condition: Good Price: $ 50.00

40.) Sencore Model MU-150, Mutual Conductance/Transconductance Vacuum Tube Analyzer.

Condition: Good Price: $ 250.00

41.) Hewlett-Packard Model 1230A, Logic Trigger Kit, with manual and carrying case.

Condition: Excellent Price: $ 175.00

42.) AlphaLab TriField Meter, Three Ranges, High/Low Magnetic B-Field Ranges, Electric E-Field Range, and Radio/Microwave RF Energy Range, hand-held portable personal dosimeter. Covers Frequency Range from 50 Hz to 3,000 Hz and 50 MHz to 3 GHz.

Condition: Excellent (new) Price: $ 225.00

43.) Beckman Model 6148, EPUT (events per unit time)/Timer,

Condition: Fair Price: $ 25.00

44.) Shibaden Model VM-903U, 9-inch Monochrome Video Monitor,

Condition: Good Price: $ 75.00

45.) Cambridge "Simpli-Scribe" Portable EKG Machine, Model 0-209445, (Genuine Antique Electrocardiograph),

Condition: Good Price: $ 450.00

46.) Hewlett-Packard Model 5011T Logic Troubleshooting Kit, with Model 10529A Logic Comparator, and Self-Test Card, and 10 Reference IC Cards, carrying case and manual.

Condition: Excellent Price: $ 250.00

47.) Tektronix Model 7623A Display Storage Mainframe, with original manual.

Condition: Excellent Price: $ 650.00

48.) Tektronix Model 7B53A, Dual Time Base Plug-in, with original manual.

Condition: Excellent Price: $ 450.00

49.) Tektronix Model 7A26, (Quantity: 2), Dual Channel Vertical Amplifier Plug-in, 100 MHz bandwidth with original manual

Condition: Excellent Price: $ 350.00 each

50.) Tektronix Mobile "Scope" Cart with slanted top shelf and flat bottom shelf.

Condition: Good Price: $ 95.00

51.) Hewlett-Packard Model 3582A, FFT Spectrum Analyzer, ELF and Audio, 0.02 Hz to 25.5 kHz Frequency Range. Original manuals and application notes from HP. Dual channels, dual memory, averaging, various filtering.

Condition: Excellent Price: $ 3,200.00

52.) EMCO (Electro-Mechanics Corporation), Model 6640 (MFIM) Magnetic Field Intensity Meter with probe and calibrating Helmholtz Coil. Original manual, portable (field) operation.

Condition: Excellent Price: $ 12,500.00

53.) WaveTek Model 111, Function Generator with original manual

Condition: Good Price: $275.00

54.) Realistic 32-2031A amplified speaker, 12 VDC required or 4 "D size" batteries.....$ 18.00

55.) Collins 30 L-1 Linear Amplifier with manual (wired for 220 VAC) (Winged).....$ 650.00

56.) Realistic 21-541 Amplified Speaker, 12 VDC required.....$ 20.00

57.) Realistic 21-541 Amplified Speaker, 12 VDC required.....$ 20.00

Then I suggest the Ham Bands are awash with CBers as there are tons of them that do not use nor maintain proficiency in OOKing. Is this another was of declaring one of not being a Real Ham even tho the ticket says he has gained access to Ham Bands?

Gary OM, It doesn't get any better or truer than what you just said
here. The sad part is that many, not all, but many think that just
because they can beep real fast, it makes up for all the inadequacies in
the Technical aspect of the hobby and in fact you see it come out here
in the denigrating of the more Technical oriented folks. Amazing!

> By the way that radio is worth $185. C Thomas

Depends on condition and the purpose you are buying it for.

As a communications receiver for modern amateur use, it is essentially useless. Without additional outboard converters it can not be used for anything other than CW and AM.

If you are an afficianado (sp?)or collector of "ye olde heavy radios", and assuming it is in reasonably good working condition and complete (both meters, original knobs, top and bottom covers), then it would be worth that price.

>
> Steve - WA6GSD

Steve,

That is a very good deal. I've used my TS820 for over 18 years,
and I would not part with it. Someone should snap that one up.
(I am tempted myself!) In case others do not know: The TS820 has a
built-in AC supply, pi-net tuning (no fussy solid state SWR shutdown),
and has FSK built-in, which the TS830, 430, and 440 do not have. Also
has a built-in (small) speaker. Mine still works perfectly after
thousands of hours of CW and FSK operation, with original 6146 final
tubes. It is a great AMTOR/PACTOR rig also, switches in under
15 mSec. In addition, it has an extra, non-dedicated spare bandswitch
position (AUX), in addition to WWV/JJY band position.
Years later, if you (ever) want to part with it, it will likely be same
or better price as when you bought it.
'Nuff said.

In article <6dect7$sff@lehi.kuentos.guam.net>, kh2d@kuentos.guam.net (Jim Kehler) writes:

>What is it, Art, that you 'hear' these contesters and DX'ers doing that >is a rules violation ? Getting better signal reports than you do ?

I'm not really a DXer, and I live in a big city, so a contest setup would mean moving. Just the act of keying up on the same frequency that you know someone else is transmitting on is technically a rules violation isn't it? When I hear a DX pileup, what am I hearing? When I hear contesters try to take a frequency, what am I hearing?

>I sorry, but I think have to disagree with your emphasis that MOST hams >are law abiding. In my opinion, a FEW are. Most hams can't wait to get >hold of the MODS to make the new radio transmit other than on the ham >bands. While trivial, maybe, this isn't exactly 'law abiding'. I've seen a >pile of QSL come thru the QSL bureau here that shows me that MOST >techs who have an HF rig can't resist the urge to get on 15 or 20 meters >and make a few SSB contacts, license or no. Not the same as murder, >but not exactly 'law abiding' either.

Out of how many tech + hams where you are is that true of? There are always those who will cheat at stop signs while driving too, fortunately it's not everyone or stop signs wouldn't work. I also note that mods to open up a rig don't mean that the rig is actually used to transmit out of band, only that it can be. There is no law against posessing such a rig, only using it.

>I think the sad fact is that a) this is 1998, b) we all know damn >well the FCC enforces nothing and c) people don't seem to have the same >'respect' for things they used to have respect for: people in police >uniforms, senior citizens, and ham licenses.

I'm not going to comment about respect for police, but I will note that senior citizens have become common place and a part of society, and like most things people get used to and don't have to live with, they get less respect than when they were scarce. Besides this society now emphasizes looking and acting young even when you're 70.

At one time the perception that a ham would be caught committing a violation was high. I note that even in the 30's (before I was born), there were bootleggers, many of whom went on to become hams. Seriously, if people only went back to other law abiding hams and ignored jammers and the like, many of the problems I hear would go away. I also note that when I was driving around the U.S., I heard lids on 75 meters on the west coast too, and while I don't

know what it's like being on an island in the pacific for a long period of time like you do, I suspect that you folks have your fair share of lids too. People do push the envelope if they don't believe there is a reasonable chance of being detected and punished in some way that matters, however as far as I know, I've never jammed anyone, I don't issue strings of obscenities on the air, and I haven't operated out of band except into a dummy load to check equipment, am I really all that atypical?

3051. Why car radios won't tune NOAA WX

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-02 00:00:00 UTC
From: kriss@spec.com
Message-ID: <kriss-0203981521360001@kriss.spec.com>
Source record: 176880

>Because auto radios, are 550 Khz to 1650 Khz and 88.0 Mhz to 108 Mhz,
>and NOAA weather Radios are on 162 Mhz. Bruce
>

I understand the limitations and my posting may not have been clear. If the Govt feels NOAA WX radio important, why does it restrict the bandwith of auto radios. New auto radios could be changed to pick up NOAA. It is probably a political question. I don't think the lobbying interest of commercial broadcast industry wants competition from the Govt.

Auto makers provide only the min capability required by the Govt. Catch-22!

If this was a perfect world, someone would change the specs on car radios to require them to tun to 162 MHz or at least have an Emergency WX button.

Dick Kriss, KD5VU
kd5vu@ausgw.n9tx.ampr.org

ps: Most hams I know have at least one memory position in their hand-helds and mobile rigs dedicated to NOAA.

3052. Re: How much power can a RG58/U coax handle ???

>
>

If it is truly RG-58/U or one of its derivatives and not a cheap knock-off
then the specification is:
300 Watts,
1,900 Volts
Take a look at the manufacturer's name, should be printed on the cable, all
the major makers of quality co-ax produce one or more versions of RG-58.
Widely used in professional HF installations.
But - as the SWR goes up the power/voltage handling capability goes down, just
like any feedline.

Saturday, the 28th, we started a class for new hams & those wanting to
upgrade. Last fall I was a student in the class, entered as a Tech Plus
(since 1994), by Thanksgiving I was General, now Advanced. This time
around I'm an instructor.
Our first session we had more students than tables. The mix is about 50-50
prospective hams and those wishing to upgrade.

Best learning technique? stop counting di-da and learn to recognize the MUSIC of every character, to do that you must start at a high speed, maybe 30 WPM, because on slow speed there is no music on a characrer. Or Buy the tapes, learn 5WPM then Buy the 9 WPM, and then the 13WPM,so you get a chance to learn the code more than once.
C Thomas

No, Herman is incorrect on this point.

The only way it would be analogous is if the standard for for entry/continuance in high school is a grade one reading level. I suspect that even in Hawaii the educational curiculum powers-that-be would agree that success in high school is much easier for students that are literate to at least the commensurate grade level. On the other hand, the international requirements for Morse code testing is silent with respect to speed at which the examination is administered. As Coffman has pointed out, once that skill has been demonstrated at 5 words per minute, any other testing beyond that speed is superfluous, in so far as the international requirements are concerned.

Right, and the optimum height above average terrain for a half-wave dipole antenna for this band is 875 meters ~= 2865 feet, which is only just slightly over a half-mile high. Its length will have to be 2865 feet also, which is longer than the longest cable span ever hung. The only material strong enough to support the span is spider web, and I do not know what the velocity factor of spider web is. There will be no two-way communications on this band as there is only one place on earth that can support an antenna for it: The World Trade Center towers in New York City. The antenna will have to be a horizontal multi-loop spider web antenna, and the station will have to be a one-way beacon, since no one else can build the required antenna.

I think its worth it of course. I can now set my hf rig up to scan all the bands to listen for dx . I like this call better than the old one. I dont have to bother with where I am in the bands. I can now talk to my friends on cw , in the extra class band segments, where its not crowded, which I could not do before.
I am not limited as to what I can do in ham radio now. Yes , its worth it to me.

> by saying that.

Well, you can certainly receive FM via slope tuning, or ride the RF gain
control to use the BFO for SSB, but the result will be inferior to what
you get from a receiver that has a discriminator and product detector.
Using the proper circuits works better. And there are modern receivers
with much better IP3 than the old R390, and much lower noise temperatures
too.

I agree with Hans that, to a collector of heavy iron, the R390 has considerable
value. But someone looking for a high quality receiver can do much better by
looking at a more modern radio. And I say that having owned and operated
a R390 in the "old" days. Put it beside a good modern receiver and the
difference is often astonishing. The R390 was about the best there was
in its day, but its day was a long long time ago. I think you guys need to
use one for a week side by side with a late model receiver in order to

refresh your memories. I stayed with tube equipment for a long time after solid state equipment came out because the early solid state equipment wasn't very good. But that's changed. Any recent solid state receiver can eat the old tube receivers' lunch. And they're smaller, lighter, and consume much less power.

>50 kHz (someone correct me if that's too low).

75 kHz. That equates to 165 kHz occupied bandwidth, so a very wide
IF filter is required, typically 180 kHz. OTOH, NBFM has an occupied
bandwidth of 13 kHz, and filters are typically 15 kHz wide. Trying to
receive NBFM with a WBFM filter results an an extremely degraded
SNR. And of course the discriminators are different too, and a WBFM
discriminator would have very low output if used with a NBFM signal.
Basically, you'd have to add a third IF strip and discriminator to
receive NOAA broadcasts on an auto receiver.

That's rather pointless anyway since you're much more likely to be
within range of a commercial broadcast station than you are a
NOAA weather station (there are lots more commercial broadcast
stations, they're better distributed, and they run lots more power).
Since commercial stations are required to participate in the EAS
system, and are required to relay SANE transmissions directed to
their MSA, it makes much more sense to just monitor the broadcast
station nearest your area for alerts.

Your a little too late with thiscommentary Jim, unless of course you were
joking, there have already been plenty of two ways on 1750m by amateurs
operating under the no-license regulations (1 watt, 50ft antenna etc)

I just bought a '98 Subaru Outback limited, and it comes with a AM/FM, Cassette, CD AND Weatherband radio. The six radio buttons select between the 6 available weather freqs when the WX is chosen.

So, it can be done. I guess Subaru added it 'cause it fits with the Crocodile Dundee image.

What difference does it make Masa? Should we discriminate against seniors who decide they want to join amateur radio?By the way my son was licensed at 15 and my next one will be licenced at age 9, and yes, they both know code.

Get your front end to the Icom fixed yet Masa? I told you 6 months ago you had blown a semiconductor. Did it take you 6 months of not hearing anything to figure out you had a problem? haw haw haw.

I am an inactive ham - off the air nearly 10 years. Now I am planning a cross country bicycle adventure and wish to take a handi-talkie.

PROBLEMS:

1) I misplaced my license in my last move. Where do i send for new one, including address change and renewal if possible?

2) Can someone recommend a handi-talkie - by brand and model number - which will be VERY light, durable and reliable and will take a charge quickly (charger must also be VERY light)

3) What band(s) will be best for abundance of repeaters on my trip - San Diego, CA to St. Augustine, FL.

Thanx

And some of them respresent fairly impressive Dx too, IE in excess of
1,000 miles with those itty bitty antennas and QRP power. They use
coherent digital signaling, of course. If this becomes an amateur band
with no restrictions on antennas, and amateur legal limit power, this
could become a band capable of very serious Dx. But I wonder how many
amateur radio operators will use the Lowfer digital techniques rather
than trying to bull through on CW. Should be amusing.

But I'm concerned about something else. The Lowfers have spent
decades developing the techniques which work in this spectrum.
Are they now to be unceromoniously shoved aside? That would
be a real pity.

----Harry:

Your license is good untill March 27, 2000.

To renew your license at that time you need to do it within 90 days of
expiration. To get a new copy for use at this time, write to the FCC at
Gettysburg, PA and advise that you have lost the license and need a copy.
If you are reporting a change of address you need to do so with a form 610.
Again, you can write the FCC and they will provide you with the form.

You can download a copy of the form from the Web page of the ARRL or you can
find the nearest Volunteer Examiner and they can provide you a form 610. You
can find the nearest VE by going to the ARRL Web page.

I cannot advise on a specific HT for you as there are so many options and
different uses. In general I would say that the idea of a quick charger
precludes a small and light weight. The closest you can come to that is a
model that will allow you to use replaceable batteries such as "AA"'s or
similer. Quick chargers are larger than the "cube" transformers that plug
into the wall (which take some 10 hrs. or so to charge).

Call an equipment outlet such as Ham Radio Outlet (1-800-854-6046) or AES (1-800-558-0411) --- you can e-mail them at: <help@aesham.com>. These places will be glad to help advise you on the particulars for HT's.

HT's use 2 meter, 70 cm, with 1.25 meters a third choice. There is some use of a 6 meter HT but I doubt that there is much use as compared to 2 - meter repeaters (I have no experience in 6 meter use).

Hope this helps,

73,

Marc Schneider, Psy.D.

Good point Gary. I played around with it about 20 years ago for awhile and found that most of the Lowfers were already hams. Hey that's why most of them stayed within the requirements for power and antenna length.....

But I would hate to see any non-ham lowfer that has been legally using that band get booted. Maybe they could make it dual use. 1 watt no license - 100 watts licensed....

It is a pity but it is the price of progress, if we can call it
progress. Perhaps some of the Lowfers will feel they and their efforts
"developing the techniques which work in this spectrum" are being
shoved aside. Some pro-coders likely feel that same threat.

As a _total_ guess I would say that most Lowfers could pass the Tech
exam w/o difficulty. How does the wording of the current treaty
consider the 1750 metre band, i.e HF ~160 mtrs to ~10 mtrs or ~10 mtrs
and down?

If I had to choose one or the other I would rather have coverage of the SkyWarn bunch during severe weather around here than NOAA and any Commercial stations.

Boy, I don't remember saying that, did you say that Gary?
I would agree tho that any one suggesting that we just write in for our
ticket sans testing, would fit your "ship of fools" thing there.

>
> You don't even see that you have totally contradicted yourselves--not just in
> this posting, there have been plenty of others. On the one hand you do a blanket slam

Richard I don't wish to be seen as slaming anyone. I have never called
anyone a "technical incompetent" nor do I intend to. But you have to

admit that 12 year olds passing the exams and then admitting they know
nothing about radio electronics is telling us that maybe the written
exams have gone under board at a time when I hear from you guys that we
"must" hold or increase the code testing levels. That is my only point
in that respect.

Why? Because
> most code supporters posting here are not graduate engineers? In the Amateur radio
> service? And they should be?

Richard, I have never heard anyone suggest any Ham need be a grad
engineer for any reason. Some do get a little, (hell, a lot) perturbed
when Code Testing is held up in todays world as more important than a
real working knowlege of radio electronics. In truth, do you feel that
way?

For that matter, a great many engineers who DO support
> code don't post here at all. And on other hand you're giving out knowledge-free
> all-access licenses to all comers who have a memory and the desire for HF yakking.

You are of course refering to maintaining current pools with no change
in test proceedures which does tend to make memory a great asset. But
many here suggest computer generated questions which could rephrase
every current question in which case all 4 answers become viable. Would
that assure a higher level of real understanding without demanding one
be a Grad Eng? You do realize we have to memorize a good part of this
stuff. No formula just remember spectrum boundries etc.

A
> study in total contradiction. THAT'S amazing.
>
> One of you is an anonymous acknowledged Freebander, the other a long-time bitter
> "victim" of the Incentive Licensing Plan of 1968 who has made enough sympathetic

Yes Richard, I have operated "Out of Band" as my friend down at the FCC
field office referes to it. Been a few years but happy to report I made
more GOOD friends from MORE places in the world than I ever did on the
Ham Bands. Legaly of course on the Ham Bands. Would you say things are
better now on the Ham Bands than they were 10 - 15 years ago? Me either
and I am not sure I am in a hurry to go there again. Not an excuse,
just a fact.

> You two both need to see a good head shrink and have yourselves analyzed for
> hostile fixations. It's clear that you don't really understand what you're saying.
> Help is available.

Richard I am deeply appreciative of your concern but I am clearly in
command of what I am saying. You must be more careful in what you
attribute to others and what they say, believe, and have held since day
one. I will admit that at times I am able to see a little more insight
from both sides of the issue, and because I do, have no problem in
attempting to find a compromise position which the majority here could

endorse. There does seem to be a steady stream of "you said this and you said that" coming from the Code Test Forever side but that is recognized by most as Smoke in a weak area of your position.

>
> In other words, you're a couple of nuts.

Ah Richard, you don't mean that do you? Tell you what, my apology to Gary in that he has to share that condition with me, but for my part I figure I am in great company.

Gents:

Receiver test data from Robert Sherwood, Sherwood Engineering, Inc.

RCVR SENS. NOISE FLOOR SELECTIVITY ULIMATE REJECT.

Collins
75S3-B 0.1 uV -146 dBm B+ 85 dB
75S3 0.1 uV -145 dBm B 75 dB
R390-A 0.2 uV -137 dBm A+ 85 dB

Icom
IC-761 0.4 uV -131 dBm B- 90 dB
IC-781 0.5 uV -127 dBm B 90 dB

Yeasu
FT-757 0.7 uV -120 dBm C 70 dB
FT-ONE 0.2 uV -135 dBm C 80 dB
FT-980 0.12uV -136 dBm C 62 dB

Kenwood
TS-930S 0.15uV -135 dBm B- 80 dB

Now, lessee:

A. "The r390 isn't up to the level of performance of modern receivers."

B "The R390 is NOT EVEN close in performance to the cheapest piece of what you call that imported junk available today, NOT EVEN CLOSE."

Opinions are like belly buttons; everybody's got one....show me your data.

Gary Erickson

I am in urgent need of the mod for an Icom 2340 to allow out of band transmit especially in the 430 MHz range. This is for satellite work to account for doppler. If you knoe the mod could you please mail me.

Thanks much,
Ken Cochran N2RPN

Harry, be advised that the FCC licensing computers in Geetysburg are out
of commission at this time (have been for almost 2 weeks) and they are
not sure as to when they will be up and running

>

> into the wall (which take some 10 hrs. or so to charge).

You might want to look into the Quantum battery pack. This is a small
rechargeable battery pack that can fit on a belt, be secured to a back
pack or bike rack and attaches to your HT via a flexible cable. It
allows max power for an extended length of time and if not used to often
will last for days between charging. It is a tad heavy..about a pound
but it is a very good piece of equipment.

You might want to also consider a chest pack for your HT and a bike rack
mounted antenna. Keeps your hands free and allows you a better means of
maintaining contact with repeaters and simplex contacts

>
> Call an equipment outlet such as Ham Radio Outlet (1-800-854-6046) or AES
> (1-800-558-0411) --- you can e-mail them at: <help@aesham.com>. These
> places will be glad to help advise you on the particulars for HT's.

Also try R&L Electronics in Hamilton, Ohio, they have all the major
brands are are VERY competitive when it comes to the big outlets.

As I recall, Drake had a CW only version of the TR-4 Transciever, with a model
number of TR4CW. Would have been mid to late 70s maybe. No modulator, and
an extra receive filter, I think.

I once sat in a meeting at GM where there was yelling and screaming about
the issue of rounded buttons -vs- squared buttons, at the additional cost of
five cents a radio....
The reason there is no NOAA coverage on radios in American cars is MONEY, if
the marketing groups at the US automakers could be convinced they could sell
it at a profit, it would be available.

As soon as you hook an antenna to the rig, none of those figures mean much of anything in the HF spectrum below 30 MHz. They're all essentially equal for all intents and purposes. What matters is that you're using a receiver whose sound you like, whose features you like, and which has a good set of IF filters in the bandwidths you want.

For SWL'ing, you could do a lot worse than an R-390, especially considering that some of the newer, cheaper rigs are so full of synthesizer noise that the sensitivity specs are applicable only if there are no other signals in the band.

Once you get into the VHF spectrum, it's easy to make the case in favor of solid-state receiver technology. But receiver sensitivity on the HF bands was a solved problem 30 years ago, largely thanks to the excellent engineering that went into "boatanchors" like the R390.

Icom makes an "adapter" to use aviation headsets with the A21 and M5.
It also works through the standard speakermic jacks on my FT-470
(typical jack configuation found on many HTs). However, on the Yaesu,
you don't get sidetone when transmitting.

The satisfaction of meeting and conquering a challenge.

The satisfaction of knowing that you've mastered all the official
requirements offered in your hobby.

The peace of mind knowing that no matter what changes there may be in
future licensing structures, you'll likely be grandfathered in with
full privileges without having to jump through any more hoops.

The right to look down your nose at all those lowly Novices, Techs,
Generals, and Advanced class hams. (optional, not recommended)

"Because it's there!"

I have a 202 myself with the same problem.....I disasembled and
inspected, and it worked well for a while, then the problem returned.
Good Luck!

OK, first try this: When it sais "Loc'd" press FCN, then 0000000 (it may be either 6 "0"'s or 7 "0"'s, IO can't recall exacly), then press RCL. If you are lucky, you will get "Loc xxx" and xxx should be the lock code. This worked on my Motorola DPC-550 flip. ANother things to try is http://radiophone.dhp.com/

they may have the code there. Good luck and let me know if it works.

I know of no such rig. I suspect he was refering to the Drake 2NT, a CW-only transmitter. Or, he confused Drake with Heathkit, and had the excellent(for its time) HW-16. This was also not a transceiver, but a receiver and transmitter sharing a common chassis.

There is no government law requiring auto manufacturers to install
a radio, Dick.

>If this was a perfect world, someone would change the specs on car radios
>to require them to tun to 162 MHz or at least have an Emergency WX button.

That would be an *expensive* radio. NOAA WX broadcasts use 5 kHz
deviation, while commercial FM broadcast stations use at least
50 kHz (someone correct me if that's too low).

There's no restriction on car radios as to what they can be
designed and built to receive. If there is, please specifiy
the particular FCC restriction.

>New auto radios could be changed to pick up NOAA. It is
>probably a political question.

What's the political question or issue?

> I don't think the lobbying interest of
>commercial broadcast industry wants competition from the Govt.

Again, what's that got to do with anything. It is more
likly the lack of anyone wanting the NOAA as part
of their regular auto radio.

>Auto makers provide only the min capability required by the Govt.

The government doesn't require a radio at all. What are you
talking about?

>If this was a perfect world, someone would change the specs on car radios
>to require them to tun to 162 MHz or at least have an Emergency WX button.

What specs?

that is a shot uneeded and unfair.
I personally can copy code much
faster than at least 10 extra class
hams, I know more about antennas,
I am still lacking a bit on the building
aspect, but getting there. There is
much to do above 50mhz, and lots
of activity.

and another thing, you don't have to mess with those assinine
extra class guys who want to be pricks and use complete unham
behavior on the hf bands <much more friendly on above 50mhz>
INMHO

I think the MAIN reason for not including NOAA is the fact that the radios would then be easily converted to receive police freqs. Most states have laws strictly forbidding mobile monitoring of police traffic.

=:o

Already done Jeff !! We have a bunch of old homestead sections out at the ranch that are a 1/4 mile on a side. I figure the electric fence wire will be just right and the RF should keep the cattle respectful. With the dry conditions in late summer it doesn't really matter how high you are above the dirt you are well above RF ground. Interested in more on this, this is the first I had heard of it. Previous use of the pasture fences include counterpoise to the 5/8 wave 160M vertical disaster(wind storm). You keep soldering I do WIRE !!

Howdy also to Scott he does wire too.

So the two of you would resolve all the problems in the ARS by allowing almost anyone and everyone a essentially test-free license --knowing no more than what was memorized by word associations to pass the written exams--to gain full access to all ham radio allocations, to do with them whatever they wished, in the absense of any enforcement. All in the interest of eliminating a Morse code test. It's a solution that could only be put forth by a ship of fools!!!!

You don't even see that you have totally contradicted yourselves--not just in this posting, there have been plenty of others. On the one hand you do a blanket slam job on all code supporters as "technical incompetents" even though most were licensed long before the 'no-test tests' and use all the advanced technologies. Why? Because most code supporters posting here are not graduate engineers? In the Amateur radio service? And they should be? For that matter, a great many engineers who DO support code don't post here at all. And on other hand you're giving out knowledge-free all-access licenses to all comers who have a memory and the desire for HF yakking. A study in total contradiction. THAT'S amazing.

One of you is an anonymous acknowledged Freebander, the other a long-time bitter "victim" of the Incentive Licensing Plan of 1968 who has made enough sympathetic remarks toward the Freebanders to make his own leanings suspect.

You two both need to see a good head shrink and have yourselves analyzed for hostile fixations. It's clear that you don't really understand what you're saying. Help is available.

In other words, you're a couple of nuts.

>lot in advance
>
>

1. Unlocking requires a code which is programmed by the cell phone company initially, but which can be changed by the user.

2. You will not be able to scan with the phone. Sorry to disappoint you, but this is not just a "radio receiver" you have found. It employs computerized circuits which lock on to one channel at a time in a full duplex mode. You will not be able to "evesdrop" on the conversations of others.

3. The electronic serial number of this phone was most certainly deactived when the owner realized it was out of his/her possession. The telephone now is unusable nationwide, as presently configured. Reconfiguration without authorization is a crime.

4. Consider returning the phone to one of the cellular carrier's representatives. Often, there is a reward for the return of telephones and pagers. Reward or not, I'm certain it is how you would like to be treated if you lost a piece of electronics gear worth several hundred dollars. You'll feel better for it, and it will make some consumer very happy.

The government can (and does) dictate the frequency range of radio receiving equipment, but it is not limited to automobile usage.

The most recent change was that the upper limit on AM would be raised by several channels on all units manufactured after a certain date.

The frequency range of television receivers, likewise, is dictated by the US Government; and, in fact, has been changed several times during the past three decades.

I can't believe Hans does not know how to receive an SSB signal with an R-390
with out the outboard SSB adapter. Maybe he was trying to run the price down
by saying that.

I once talked myself out of a free R-390. It had found it's way into the Ham
community here somehow, maybe through the Mars system. Anyway the Ham
who had it at the time told me I could have it. He did not want it because it
would not receive SSB. When I showed him how to do it he changed his mind.

You can denigrate the questions pools all you like, but
opposing the code test does not in and of itself mean you oppose
enforement of of reasonable rules. A person can oppose the Code
requirement favor increased or decreased enforcement. the position
does not automatitcaly mean one or the other position on enforcement
or even say that you like the existing technical tests (thinking them
either to hard or too easy) I happen to think them too easy, haven't
seen the need for more enforement, (after all I can't use the band so
how would I know personaly if thier is a problem or how bad it is)

Where was the Blanket slam, I didn't see it. maybe it was too
braod. I think it would have been better phrased many of the vocal
procode people ... but even the statement made falls shorts of
branding procode as tech incompetant

Maybe you are right, so, does the fact he may have views you
don't like make right or wrong on other issues. A common tendency of
both sides is to get personal with the other, does this help at all. I
will add that the use of anonymous and acknowledged seems a bit odd as
used here.

This class will be free and taught by members of the U of MD ARA.

Location: U of MD, College Park, Computer & Space Sciences, Rm 4400.

Tuesday nights, 7 p.m, starting Tuesday, March 3, 1998.

(if you miss the first class, don't worry too much - contact us!)

Talk-in for the class will be on the 145.49 (-600 kHz) repeater,
located in College Park.

We will be using the newest version (Red) of Now You're Talking.
This is an excellent text, available for $19 at Radio Shack and
numerous other locations as well.

PLEASE call or e-mail to register!

73!

We look forward to seeing you there!

I have an idea, end this thread. Here's an interesting article I picked up
this morning, while we are on the gay thing.

05:47 PM ET 03/02/98

Court finds U.S. Boy Scouts broke discrimination law

(Adds comments from Dale, background)
HACKENSACK, N.J. (Reuters) - A New Jersey state appeals
court ruled Monday that the Boy Scouts of America discriminated
against an assistant scoutmaster when it ousted him for being
gay.
The Superior Court appellate panel rejected arguments by the
Boy Scouts that the organization was protected by a
constitutional right of free association and was exempt as a
private, voluntary association from anti-discrimination laws.
Reversing a 1995 lower court ruling, the appeals panel found
that the Boy Scouts solicited members from the public and were
thus subject to such laws.
The Boy Scouts of America will appeal the decision to the
state Supreme Court and to higher courts if necessary, a
spokesman said.
The case was the first to be tried under a six-year-old
amendment to New Jersey's anti-discrimination law that added a
prohibition based on sexual orientation.
James Dale, now 27, sued the Boy Scouts in 1992, alleging
the organization violated state law by expelling him in 1990 on
learning that he was gay.
Dale sought reinstatement in his lawsuit, but he said Monday
in an interview from New York City, where he now lives, that he
was no longer interested in the Boy Scouts. He said his victory
was symbolic.
``I think it's wonderful. It falls into line with accepting
all people -- ironically, everything I was taught in the Scouts
all along,'' he said.
The Boy Scouts organization was ``disappointed'' by the

court ruling, said spokesman Gregg Shields.
The organization teaches ``family values'' that do not include homosexuality,'' he said.
``We have membership and leadership standards, and one of those is that you cannot be an avowed homosexual,'' Shields said. ``We don't try to force anyone to accept our beliefs. We simply ask them to respect ours.''
The Boy Scouts of America has 5.8 million members in the United States, some 100,000 of whom live in New Jersey.
Dale joined the Boy Scouts when he was eight years old, earned more than 30 merit badges and reached the prestigious rank of Eagle Scout before he was expelled, his lawyer said.
``He was their model scout -- until they found out he was gay,'' said Evan Wolfson, attorney for the New York-based Lambda Legal Defense and Education Fund, which represented Dale.
Wolfson called the ruling ``a victory for gay rights and for non-discrimination generally.
``The scouts hold themselves out to the world as all-American and apple pie and open to all, and now we know that's not what they're about,'' Wolfson said.
``This court blew the whistle on them,'' he said.
Dale was an assistant scoutmaster and a sophomore at Rutgers University when he was expelled from the Boy Scouts, which learned of his homosexuality from an article in a school newspaper. He now works for an HIV and AIDS education magazine.
Despite his expulsion, he said he respected the Boy Scouts for teaching him character and virtue.
``And I am who I am because of what they taught me,'' he said.

Knowing code is about as important as typing at 60 WPM with 5 or fewer typing errors in a five minute period. I think everyone should be able to type 60 WPM before they get their internet privileges. This would insure that the CBer type and other undesireables would stay away. I am all for it, why 30 years ago, I managed the 60 WPM rate,, with all fingers on the keyboard. cann't you?. BTW, I have a General Class license so I have demonstrated my code skills.

You may be eggagerating just a bit. The R390 may be better than
a $49.95 DAK Chinese import, unless you need to take it portable
on batteries. But in general you're right, the R390 just isn't up to
the levels of performance available from modern receivers. It
was a great receiver for its day, but its day was 30 years ago.

I agree that's essential, but I don't know how practical it is. What I'd
prefer is a lifting of the Part 15 antenna limitations and allow the band
to continue as a Part 15 band. Putting high power amateur signals on
this band would be very disruptive. One watt is plenty if an antenna
with a bit more efficiency could be used in conjunction with the strong
coding already in use.

Hello,

While don't know how to confirm this. I'm pretty certain the
inclusions of UHF tuners in TVs was a government mandate. I would guess
some time in the 60s. The only reason I could think of why they would
do so is to promote the construction of UHF stations or to give the
existing UHF stations at the time a level playing field.

>another discriminator, etc. ??

Mainly because slope detection doesn't work very well. You get no FM
enhancement or FM capture, and no limiting. The NOAA stations aren't
very strong anyway, typically running 100-150 watts, and with the added
burden of the poor performance of slope detection, they wouldn't have
enough usable range to make the effort worthwhile. You really need
another IF strip, with the proper filters, limiting amplifiers, and the
proper discriminator if you want enough range to make it worthwhile.

One watt is fine, but practically, I would rather see 25 watts or something like that. That should not bother anyone, and still be usable for various modes. The average bloke is only gonna run up a few hundered feet of wire, at best, and that would not constitute much station or power or interference to anything. Above 25 watts and there might be harmonic problems in the beacon or marine bands. that could be problematic. Below 10 watts and you really have to be a diehard to get anything out of the band. I would not like to see it unlicensed, but there should not be any problem opening up the band to users with a minimal licensing structure such as novice or tech. As some food for thought, perhaps divide it up into 160-175 for digital modes (morse and rtty etc.) and 175-190 for voice modulation modes. Leave it part 15 for normal unlicensed use, also, for a few years or permanently, to see how it would all shake out.

It would be interesting, though, to see such a band fly.....

I don't recall that, but there was a TR4CX. It incorporated some of the improvements from the Twins series (T4X/R4C). But Drake's TR series was intended primarily as a SSB mobile radio. It didn't have the good filtering for CW that the Twins had. AFAIK, the 2NT was Drake's only CW-only transmitter. (But I don't know every Drake model ever made, so I could be wrong about that.)

WANT TO HOOK UP KENWOOD SM-220 TO TS-440SAT
Just picked up an SM-220 w/BS-8 Pan Adapter. Looking to pull the IF off the TS-440SAT to provide Pan Display on the SM-220. The 2nd IF of the TS-440 is the same freq. required by the BS-8. I've searched everywhere for ap notes, info, disasters, ... all to no avail.

Has anybody done this or can point me in the right direction? I'll be a pioneer if I have absolutely to, but would rather find out if anybody else has been down this road before.

Any help or info would be very much appreciated.

Thanks,
Jeff

4 March 98 PLEASE POST & FORWARD TO INTERESTED PARTIES. THANKS!

Late last month Phadean Engineering Co., Inc., released a freeware version of YGO (YAGI GENETIC OPTIMIZER). That version was limited to 4-element arrays. As a public service to the amateur community, we have decided to release the entire program (150-el) as freeware. The unrestricted YGO has more optimization options and displays the Yagi geometry on-screen. To obtain a copy, visit WB6TPU's website at: http://www.qsl.net/wb6tpu. Click on the NEC archive. The download file is "ygo.zip". We want to thank Ray Anderson, who maintains the NEC archive site as a public service, for his assistance in posting YGO. Ray can be reached at raymonda@radium.eng.sun.com if you have any website related questions. We can be reached at phadean@ma.ultranet.com for any YGO-related questions. Please provide YGO feedback. We hope to see some really interesting Yagis developed with this software! 73, Phadean Engr. Co.

3. Projects Dumbass and Outreach
4. The FAA, what a joke
5. CCCC

---------- Another IRS Hallucination ---

You know I'm the king of cluelessness, well, last night I had a double helping
of vanilla ice cream and some extra spicy bean chili, woooaaahhh, ohhhhh,
here's my dream...

Wednesday, March 4, 1998, New Carrolton Federal Geek Slave Quarters -

Hey you, Geek! Mr. Rossotti wants to talk to you.

m-m-m-m-me? The skinny, pasty geek knocks over his diet dr. pepper and starts
for Rossotti's office.

As he's waiting, another geek, tears steaming from his eyes, his T-shirt
hanging out of his jeans, rushes from the boss's office.

..AND GET SOME DECENT CLOTHES, the voice booms out, NEXT.

The pasty geek, hands trembling, enters the chamber, the same chamber in which Mr. Rossotti read the riot act to the IRS's ex-CIO. SIDDOWN.

yesssir! the geek squeaks out.

I'VE CLEANED HOUSE AT THE TOP, NOW IT'S TIME TO TAKE CARE OF YOUSE GEEKS.

gulp.

I DEMAND THE BEST. THIS WILL BE THE TOP AGENCY. he picks up an walnut from a bowl on his massive desk, OR I WILL KNOW THE REASON WHY. and crushes the walnut in one hand. IS THAT CLEAR?

I EXPECT PROFESSIONAL, TOP QUALITY WORK FROM MY GEEKS. the geek glances over at the double headed chopping ax on the wall.

I EXPECT A LOT. he reaches into his desk, pulls out a wad of 100 dollar bills. ...AND I GIVE A LOT.

YOU DID A GOOD JOB. HERE'S A ROSSOTTI REWARD. he throws the bundle of money at the geek.

KEEP UP THE GOOD WORK. the geek looks at the bundle, it's six thousand dollars.

I EXPECT MY GEEKS TO BE WELL TRAINED, CHECK OUT http://www.share.org,

YOU'RE GOING THIS AUGUST. THEY HAVE THE BEST TECHNOLOGY TRAINING AVAILABLE AND THEY HAVE AN OPEN BAR AND PARTIES EVERY NIGHT. Rossotti is smiling.

YOU ATTEND THE TRAINING AND THE PARTIES. WE WORK HARD AND PLAY HARD HERE.

NOW GET BACK TO WORK...

...AND GET SOME DECENT CLOTHES.

and the pasty geek, tears of joy streaming from his eyes, rushes out of the office to tell his family the good news.

Yes, another clueless, completely made up story about life in the federal city; Washington DC, the place where the mayor, a drug-crazed ex-con, draws a salary of $90,000/year to lead the city back to colonial times.

But can it be, will federal geeks at the New Carrolton slave pens get 10% bonuses? Hundreds have quit. There's work to be done and a highly regarded technology manager is at the helm. Can he pull it off? If it happens, it will hit the news in a couple days.

---------- What's a Ham ----------

The FCC will issue you a license to operate a radio transmitter on HF and VHF (and above frequencies). There are several license classes with different exam criteria. The exams provide nominal assurance that you know how to operate a radio transmitter without violating international laws, interferring with other radio services, or injuring yourself.

This requirement arises because the ham license gives you incredible privileges. This includes high power operation. In the ham world, 100 watts is low power and can reach around the world. The novice license is restricted to 200 watts but all other licensees can crank up the power to 1,000 watts.

While other radio services use 'channels', that is transmitters and receivers fixed to specific frequencies with few controls, ham equipment is fully frequency agile.

Ham equipment is extremely varied, capable of a variety of modes in addition to voice and morse code. But here are the basics:

You must know morse code to operate on the HF (high frequency or international range bands). Without morse, you are limited to VHF only and for most people, this means 2 meter FM voice. The Technician Class license is an example.

With 2 meter FM, a 100 dollar directional antenna in a good location, you can communicate over a 50 to 100 mile range on a consistant basis. Occasionally, you will be able to talk to stations several hundred miles away. A representative synthesized 2 meter FM transceiver, the 50 watt IC-2000H is under $300. It includes a 118-174 mHz scanner.

As long as the repeaters are up, you can communicate over the same ranges using a handheld transceiver.

With a higher class of license, such as the General Class, you can operate on the HF bands using SSB (single sideband voice) and talk around the world depending upon variables such as your location (it's good to be on a hill), type of antenna, power, and band conditions. A 13 word per minute morse exam is the key to the General Class.

The IC-707, 100 Watt SSB/CW/AM HF transceiver includes a .5 - 30 mHz shortwave receiver. The IC-707 is under $800 ready to operate on a car battery. An AC power supply is another $250.

HF antennas tend to be large and expensive. Simple runs of wire, 66 feet, 32 feet work well for shorter ranges, one or two thousand miles. Direction antennas, Yagi's, quads, tribanders, or log periodics will improve your station's performance. A basic directional antenna is about $500 including a support mast, small rotator, wires and cables.

Low power, 100 watts SSB, is adequate for these shorter distances but stations that regularly work around the world have kilowatt amplifiers available.

If the end of civilization scenario plays out, an HF transceiver like the IC-707 will allow you to talk from Oregon to Florida and keep the lines of communication open. On VHF, the IC-2000 will reach out to the horizon and just slightly beyond on a regular basis.

For more information:

http://www.arrl.org follow the links to the stores and the FCC.

If you are near Washington DC, check out Electronic Equipment Bank in Vienna Virginia. I buy all my ham gear from them. They also sell SWL receivers and

scanners but VHF ham equipment like the IC-2000 comes with a scanner built in and HF transceivers include all band SWL receivers. Dick at EEB has a nice catalog with pictures and specs of all this stuff.

---------- Power and Operations --------------------

Referring to the two sample transceivers above, we're looking at about 100 watt-hours per hour of operation, average draws of 10 amps and 15 amp peaks at 12 volts. VHF (2 meter) FM draws much more power per transmitter watt than HF SSB. The reason is that FM is a continuous duty cycle and SSB is very intermittent. SSB draws little power between spoken words. In either case,
the smallest gas generator will supply enough power. With a good bank of batteries, you might get by with running the generator only once a week.

For solar, a panel that produces an amp/hour will let you operate the station for an hour a day. A two or three amp/hour panel array gives you more of a safety margin.

Given power, ham radio will provide reliable communications in the following conditions:

0-10 miles, line of sight, VHF FM, handhelds, $200 each.

0-100 miles VHF FM, 50 watt transceivers, $300 each, directional antennas or repeaters.

0-1000 miles HF SSB, 100 watt multimode, solid state transceivers, $800 each, simple wire antennas.

0-Worldwide HF SSB, as above with 1 KW amplifiers, $2000; larger antennas, $500 and up.

All types of stations are available new or used from reputable stores.
Ham gear has been all solid state for the last 20 years,
it is extremely reliable. Some ham gear is military spec field communications equipment.

With the exception of repeaters, the communications systems described above are one station talking directly to another with no third party involvement.

For VHF operation, the minimum license is the Technician. For HF SSB, the license required is the General Class.

There are digital network modes, these include RTTY, AMTOR and AX.25 using radio modems. There is also radio fax, video, and other varieties of specialized communications. In the post-Y2K world, voice and CW will probably be the fall backs.

The construction and operation of the station assumes that you can measure, cut wire, solder, and understand basic electronics, radio procedures, etc. Ham radio, even VHF FM, is not like using a cell phone or CB radio. Take a look at the vendor offerings on the web. These things are bristling with knobs, buttons, controls and modes.

All ham communications are open, in the clear, and should not be encrypted. There are prohibitions against providing common carrier services. These rules will certainly be waived if there are no common carrier services.

---------- getting started ----------

The ARRL, their URL is listed above, has information on licensing, vendors, products, and operations. Contact your local ham club; they can help you study for your license, set up your station, and prepare for emergency operations.

One of the justifications for allocating valuable radio spectrum to the amateur service is having trained radio operators and stations in each community, equipted and ready for emergencies. Hams are aware of this and hold exercises that simulate operations under emergency conditions. There are clubs and interest groups dedicated to emergency preparedness.

If you have a shortwave receiver that can receive SSB, Check out the action on 14.200-14.300 mHz days and evenings. 7.200-7.250 mHz evenings.

Scanner owners should monitor 146.52 and scan 146.610 to 147.000 mHz NBFM.

I am not convinced that Y2K will bring down civilization, I have renewed my license and am putting my station back on the air.

Two books that you should consider for your Y2K survival library are the ARRL Radio Amateur's Handbook or Bill Orr's Radio Handbook. The survivalist nut-cases are fixated on tactical communications, vox-talkies; here's a DC Y2K thought for you, something I live by... a strategist will beat a tactician every time. A strategist is thinking, planning, living 2-5 years out, a tactician is fighting to recover from last year's mistakes.

Ham radio is strategic communications. You have 673 days to build your strategic communications system. HF SSB.

---------- Project Dumbass ----------

The essense of Project Dumbass is to save the especially dumb public pronouncements of Y2K denial, save them until the right time and then rub it into the face of the denial-head. We have lots of excellent current Project Dumbass candidates, the bozo who said that nuclear missile launch controls could not possibly have a Y2K date problem <where is he now?>, the pilots and air controllers who said, no, no way there would be an air traffic control Y2K problem. <KLM, FAA, 308x, GPS, hahahaha, you dumbasses, come to me so I can whack you with my rolled up Dilbert poster.>

I might start up a Project Dumbass webpage, I won't list the names, even I'm not that cruel, I will list the quote and the time and date. That's fair game. ...for historical interest.

The point isn't to humiliate the past dumbasses, it's to educate and enlighten current and future dumbasses. In that sense, the dumbasses of the past are providing a valuable service, and if we learn from our past mistakes, we can make a better tomorrow... Project Dumbass is really Project Prometheus

and the dumbasses should have pride in their contribution.

---------- Project Outreach ----------

C.s.y2k has become noisy but it's also become inbred. It's time for Project Outreach. An excellent example is Jay's speaking to his PTA.

Others have reported on teaching classes. I've mentioned this before. Put together a one hour talk on Y2K, collect some solid background material, last year's Newsweek is good, and volunteer to be a guest lecturer from industry at a college, possible classes are business management, computer programming, computer security, software engineering. Give the professor the handouts a week before the class so the students can read the assignment. Present your information on Y2K, tailored for the class, lecture for part of the class and have a Q&A.

Leave the professor with 3-5 questions suitable for an exam. You've done a bunch of work for him, given the students some solid exposure to the issues.

Other outreach efforts include radio talk shows, cable TV, guest speaking at community groups and even places like senior centers. For senior centers, please don't terrorize granny and gramps. Tell them that Social Security started early.

---------- Geekout 1998 ----------

April 2, 3. Show your Geek solidarity by not working on Thursday and Friday. Geekout is not a strike, not blue-flu, it's a time for Y2K geeks everywhere to turn out the lights in the slave quarters. Take two days of well deserved vacation or some sick-of-it leave. Visit with fellow geeks, some DC area geeks are going camping in West Virginia.

Rototil your Y2K victory garden, clean and wax the geek-mobile, take the kids out of school and make it a big geek and little geek family day at the mall.

Go to EEB in Vienna, Virginia. buy some books or even better, a scanning 2 meter FM handheld transceiver. Dick's got lots of terrific radios. My Visa card gets itchy just thinking about his store.

Or do what I'll be doing, going to the doctor for the old-guy's physical exam; you geekettes and she-geeks can skip down a few lines, I need to talk mano-a-mano here... are they gone? Close the door, OK, listen guys, the guy who helps me with Oracle databases just had his 'PR*ST*T*' operated on, it was cancer. I know, I know, my doc has HUGE hands too, fingers like bananas, like cucumbers. And yes, if he finds something and if they have to operate, there's a chance that little-willy isn't going to be as energetic as we'd like.

But that's a lot of if's; so if you're over 40 and haven't had that experience in a couple years, well, it's time. It's sobering when a guy who works with you tells you why he's taking a few weeks off. Anyway, the geekettes have it just as bad, they get pinched and poked even worse during their physicals.

I spoke to him the day after his operation and a couple days after that. I was having lunch at my desk, he's fine but he wanted to talk... ...sliced it open, look for something like a spaghetti tube through a little meatball, clip the spaghetti, pull it out of the meatball and throw the meatball away, then take a small tube and stick it through the spaghetti and stitch it up so it stays together, I've got this bag, I've got to wear for a few weeks, hopefully only a few weeks, so I'll be wearing loose pants. ...ah, ah, ah, thanks for sharing, and I'm having trouble finishing my lunch.

So go for that screening, I'm going.

OK, open the door, let the geekettes and she-geeks back in. Hey, why are all the guys so pale.

---------- FAA ----------

I apologize to the non-mainframe gear-heads for excessing mainframe-ese in the following articles.
----------start---------
Date: Thu, 26 Feb 1998 07:38:58 -0500
From: XXXX XXXXXXX <XXXXXXX@XXXXXXX.XX.FAA.GOV>
Subject: 308x Microcode / FAA

FYI for all people out there. The FAA replaced the last 9020E box in the field last summer. Replacement boxes are 3083's. 50 left in service, 47 by FAA.

I have some of the core memory (yes, core memory) from the last 9020 on my desk at home. A whopping 4K worth.

Government concerns with the ATC systems are (from 2nd hand knowledge only, not my primary area) are switchover times, channel timing (that code has been really tweaked for performance) and disk formatting. There is a G3 box currently being tested inhouse to test run the system, but that just got here.

As for the whys of not upgrading boxes (I run on a 3090-20E w/ 64 MB we got 2nd hand from FBI), cost cost cost. Nobody is looking at ROI on these. Someone else pays the environmentals, so it's either pay now or keep what works. Not my personal idea on management, but that's the way it is.

XXXX XXXXXX
XX XXXXXX XXXX XXXXXX (FAA)
---------end----------
Our brilliant FAA management, the same management that blew a billion dollars on the failed ATC upgrade, or was it more, you know in all the excitement of seeing mountains of hundred dollar bills fly out the window, I lost track, that same managment is so d*mn cheap that they are running the ATC on less than scrap-heap iron.

The 3083 was an entry level mainframe; on a good day, it might wheeze out 5 MIPS. You can get ten year newer mainframes, air cooled boxes that bench 5

times the MIPS, for a few thousand dollars.

Look at what Mr. XXXXXX is running, a discard 3090, an 8 year old box with a big 64 Meg of memory.

This next one isn't about the FAA but it offers insight into how we got to where we are

---------start--------
Date: Thu, 26 Feb 1998 16:02:10 -0500
From: "XXXXX X. XXXXX" <XXXXXXX@XXXXXXXXXXXX.COM>
Subject: Federal procurement

Since the issue of federal upgrades came up, I thought I would contribute my story:

some years ago a federal agency (won't say who, but all the armed services would have problems without them) was bidding for backup/restore software. A big contract, many data centers. The procurement went on for 5 YEARS!!!

We finally went to a final meeting where each vendor had a chance to present their bid and answer any technical questions. They had detailed specs for the product but I immediately noticed that performance was not among them; they didn't care how long things ran as long as they eventually got done (sounds like any government agency except for the "eventually" part).

We lost the bid, but I did ask their "technical" person what they were currently using for backups. The answer was "what backups?". They spent 5 years diddling around with no backups for dozens of important data centers. And we expect them to fix their Y2K problems in less than 10 years? HA!
--
XXXXX X. XXXXX
--------end----------

Sad, too sad for the public. Sad for the geeks trapped in the tar pit. Sad for everyone. The two stories above answer the questions, how did we get into this mess? Why aren't the problems being fixed?

--------- CCCC ----------------------

Surviving the war in c.s.y2k

For the most part, I'm trying to stay out of post y2k prediction game. The technical issues are very clear to me. My priorities are the remediation, triage, stamping out the last of the denial, and oh yes, fair rates for geeks. I like to waddle in and duke it out, sumo-style, slapping and pushing, as much as the next person but when I look into my crystal ball, the post-y2k world is very hard to see.

It's like the Terminator moovees, the present does not lead inexorably to one future. We could end up fighting house to house, slapping 30 round mags of .223 into CAR-15's, the scent of cordite drifting down the

street, ducking behind wrecks of SUV's because we waited too long to make the recall to the farm.

Or, there could be inflation, shortages, brown-outs, power interruptions, 20% unemployment, all being worked out after 6 months or so.

Or, it could be even milder, it all depends upon our actions, our choices.

My advice, and it's worth every penny you're paying, is to watch the news carefully. I'm not making any lifestyle changes but where ever I have the choice, I'm making choices that assume that something bad will happen.

For example, if you ever wanted a weekend country place, if your great-aunt has been asking for help with her farm, if you've wanted to take up gardening, if your survivalist nut-case pal has been bugging you to help him put in a windpower system, if you've want to learn canning, soap making, raise chickens, ham radio, black smithing, maybe this is the time to try your hand at it... ...strictly because it sounds like fun, not that you're afraid...

The trick is to avoid conflict, just slide right in.

cory hamasaki only 667 full days left.

3186. Need Information: Use of Telegraph during the U.S. Civil War

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-04 00:00:00 UTC
From: kb9rpd@aol.com
Message-ID: <19980304213100.QAA18831@ladder03.news.aol.com>
Source record: 176661

Hello. I am researching the use of "morse code" and the telegraph during the U.S. Civil War. Does anyone know of any sources (books, articles, web pages, etc.) that may help me collect information on this subject?

I know this is BEFORE radio <wink>, but I am interested in researching "morse code" before it was utilized as CW on amateur radio freqs.

I have found very little information. I would like to reproduce (or purchase and fix up) a telegraph set from this time period. I would also like to learn what "code" they used. Did they use the original morse code system set up by S.F. Morse? Did they use their "own" system of code? Did they use today's version of code? etc., etc., etc.

I have found a few web pages which I am currently trying to absorb. However, I find very little (so far nothing) on the period DURING the Civil War.

Thanks!

[Posted for Steve Mansfield. Please don't email me about this! -- Jon]

Some radio enthusiasts are reacting to an incorrect message posted on some internet news groups regarding HR 2369, the Wireless Privacy Enhancement Act of 1998.

This bill WAS amended as promised by the House Telecommunications Subcommittee, and also approved by the full Commerce Committee. The version that was approved and that will go to the floor of the House is the version worked on by ARRL, scanner groups, the volunteer fire association and others. Mr. Tauzin and the committee staff were very helpful and accomodating to our concerns. Indeed, they allowed us to review and comment on the bill language before both subcommittee and full committee markups, as well as to let us review the accompanying report language.

The version of the bill appearing on the THOMAS web site is the OLD version of the bill, before it was marked up. The new, amended bill will not appear on THOMAS until the full committee report is published in the next few weeks.

This amended bill and the accompanying report go to great lengths to protect legitimate recreational radio users including amateurs, scanner enthusiasts and SWLers. The new language does NOT include the old CMRS proscription.

Please, please call ARRL, the House Commerce Committee or some other reliable source of information before reacting to postings about this issue on internet newsgroups.

I've often wondered how Part 15 and Part 97 users would get along if
they actually could talk to each other. We already have shared Part15
allocations (such as 902-928MHz) but there's little amateur activity on
these bands and the Part 15 users are specialized (cordless phones and
wireless audio/video toys). 1750m looks like it could be a place where
there's common ground. Part 97 doesn't seem to allow for hams communicating
with Part 15 users.

I'd be more inclined to relax the restrictions on transmitting antennas
and continue to allow Part 15 operation

Do you need to use the adaptor with their (Icoms) aviation hand-held, or is
the functionality built in? Does it have an internal battery or does it draw
power from the radio. (Or possibly the option of either). Sounds like a useful
thing to have around.

The laws of economics I would imagine.

Even if the tuning dial (VFO if you want to call it that) could slide
all the way to the 160 MHz range, the receiver would have to go to a
narrow FM operationl or NOAA would be pretty darn hard to hear.

Since I would guess that only a small minority of people (hams...and
even a minority of them) give a peep about listening to NOAA in the car,
it is not a feature the "car radio" industry wants to bother with.

I think you agree. You seem to looking down your nose because you think I am less educated. My point is that if we explore who causes the problems in Amateur Radio, often it is those with less education. The fact that they are bright, knowledgeable but without certification leaves them feeling frustrated. They believe themselves able to perform in a high tech environment but feel shut out. Therefore they seek revenge against society.

While I see this more in white, working class males, I have ran into the same attitude within poor black communities. Again these folks are not dumb rather they resent having to get an education. In the process they do not understand much of what is happening in our society due to an lack of understanding of economics, history, social sciences and even some aspects of technology. I just finished a project were my partner had all these problems plus smoking. His lack of understanding plus his paranoia made for a lot of arguments.

Examine who the individuals that are causing our problems. My guess is that they do not have a formal education. The folks who complete a post high school program, either college or skilled trade, seem to have more to loose if they do screw up. And they have discipline and goals.

Is this what you agree with or is it that you feel I am putting down the lower classes?

The Icom adapter is needed for the IC-A20 aviation transceiver, and I think
something similar is needed for the A21 and A22. The transceiver itself
has only the standard 3.5 mm and 2.5 mm speaker and mic jacks common to
many amateur HTs. The HT provides power to the adapter, which provides
power to the headset mic as well as providing sidetone audio. There
is no battery in the adaptor.

One negative feature of the Icom adapter is that the transmit/receive
switching is done by a lever switch on the adapter box. You cannot use
astandard aircraft PTT switch with it.

I've sometimes wondered if a standard amateur speaker-mic would work
on the aviation transceivers. It's certainly the same jack.

Dave

Elmers List Formatting Standards

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at designated World-Wide Web Servers (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I

politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis E. LeMay (K0GRL, W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs, including those within TAPR (Tucson Amateur Packet Radio), have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship.

The term "Elmer" has probably been in use since at least the 1950's (I'm told, but haven't yet confirmed, that it appears in British amateur radio publications from that period). The name "Elmer" was likely chosen because "Elmers" are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two. The first U.S. reference to "Elmer" in print was from Rod Newkirk, W9BRD, in his "How's DX" column in QST from the early-to-mid-1970's.

Such "Elmers" have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies. Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know

everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers may register via my formatted, on-line, World-Wide Web Registration Form:

http://www.novia.net/~pschleck/elmers/register.html

I would prefer that you register using the above form (which not only ensures that nothing is omitted, but also makes adding your entry much easier by automatically converting it to HTML). However, volunteers who are not yet on the Web are also quite welcome, and may register by writing me at elmers-request@novia.net with their name, amateur radio callsign(s) (if any), E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages, FTP archives, mail servers, or mailing lists, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it

into a special folder, my incoming E-mail filter will also send you an automated return-receipt.

Also, an unfortunate increase in the amount of unsolicited junk-mail that I receive (often dozens of messages _every day_) has forced me to become much more ruthless about filtering incoming E-mail. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not only not get reviewed for some time, my incoming mail filter (procmail) may even throw it away if it can't be automatically categorized as originating from known, friendly senders or have known, welcome keywords in the headers ("Elmer" is obviously one of those keywords).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of _"Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*],"_ and _"Amateur Radio Elmers Resource Directory [*-Z]"_ (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along

with many other informational articles about radio) when it is
published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that
case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of
rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

```
open
get /customers/pschleck/elmers/README
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/list/part5
get /customers/pschleck/elmers/diff
```

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

```
send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail within 24
hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

Maintainer of the Linux HAM and AX.25 HOWTO's

Available from:

http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html

http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html

Please direct any feedback, submissions, or administrivia regarding
these resources to my E-mail address above.

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

Pete deVolpi KC3TL

I am available most days; work from home. I am especially interested in teaching the practical side of ham radio technology. I will help troubleshoot kits, old radios, etc., but will expect the new or prospective ham to pitch in.

Expertise gained from over 40 years of ham radio and almost as many years in broadcast engineering.

North American Digital Systems Directory World-Wide Web Page:

(Sponsored by Tucson Amateur Packet Radio, TAPR)

http://www.tapr.org/directory/

The purpose of the Digital Systems Directory is not to manage,
coordinate, or regulate the usage of digital systems, but to provide
the most up to date and accurate listing of digital systems that can
be provided. Neither is it a formal organization, but a mechanism to
allow regional groups to provide and share information regarding
digital systems.

The Digital Systems Directory listing is intended for use by
individuals to further their enjoyment of the hobby and by
organizations to help plan and develop digital networks.

Please direct any submissions, feedback, or administrivia to my E-mail address above.

I am a practicing electronics engineer (for over 35 years) with expertise in solving problems in the design of linear circuits, audio signal processors, low frequency (DC to 10 MHz), low noise, field effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ.

Alternatively, you may obtain an electronic copy from the ARRL Info Server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many EMI/RFI files are also available from the ARRL Info Server. See Mary Robertson's entry for more information.

ARRL Technical Information Service Coordinator (tis@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy

for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to find parts or supplies used in our hobby.

Many TIS files are also available via the ARRL Info Server. See Mary Robertson's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

USA

* ARES/RACES/SKYWARN
* CW
* Field Day
* HF/Contesting/DX
* Novice/Tech Instruction
* RFI
* Seminars/Lectures
* Volunteer Examiner (WCARS VEC)

I've been licensed over 25 years. I was one of the first VE's certified by WCARS VEC. I have served for several years as a proofreader for the NCVEC Question Pool Committee. I work closely with the WCARS Directors, and am an active VE with that organization

I have been involved with Emergency Communications and Traffic handling from almost day one, having earned my first BPL at age 16 as a novice. I have served as Assistant EC, County EC and currently serve as District Emergency Coordinator for ARES/RACES and District Radio Officer for Emergency Management Area F of North Carolina. I also coordinate SKYWARN activities in our area.

I have served as Hamfest chairman, assistant chair, etc., as well as an officer of the local club, the Western Carolina Amateur Radio Society. I designed our homepage, am quartermaster of club equipment, and carry the keys to the club repeater. I frequently teach both theory and code for local Novice/Tech classes.

I have been Field Day Chairman for five years, serve on the RFI committee, hold WAS Awards both as a Novice CW operator and SSB Extra Class, a DXCC with 86 of them worked as a Novice. I am also the National Board Chairman of the Geratol Net, a WAS net which meets nightly from October thru April. I also am chairman of the local club's packet committee.

I "dabble" in helping newcomers make dipoles and other simple HF antennas and am frequently a new licensees first contact. (A debt I am repaying to my three trusty Elmers of so many years ago, two of whom are now silent keys)

I would be willing to help in these general areas on-line or close-by on the phone or in person. (I am a college professor by trade)

* frame grounding
* antenna selection and construction
* mounting the rig
* useful accessories
* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

Civil Air Patrol (CAP)

I was Communications Officer and former unit Landstation Bluebird 284, 1980-87. Statistically, Landstations are relatively rare. A land station in CAP is an HF-capable station operating from both mobile and permanent locations as needed. As a land station, I checked into several regional nets for the Missouri Wing of the CAP. I am familiar with the CAP emergency protocol as well as MARS and ARRL. Also, I have extensive teaching experience for Novice to General levels and currently am a teacher.

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs,

Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Via TAPR's FTP site

The TAPR Software Library is now available via anonymous FTP. You can
access the library at:

ftp://ftp.tapr.org/tapr/

Log in as:

anonymous

with your E-mail address as password.

Via TAPR's Listserv (http://www.tapr.org/tapr/html/internet.html)

TAPR maintains several SIGs in various interest areas. To get the
latest list of SIG groups, send an E-mail message to:

listserv@tapr.org

with the subject line:

Request

and one or more of the following in the body of the message:

list

for list of mail groups on TAPR.ORG

information listname

(where listname is the name of the mail group)

to request the information on any mail group

subscribe list your_first_name your_last_name

(where list is the name of the mail list you want to join and
your_first_name and your_last_name are your first and last names,
respectively)

to subscribe

Some of the current SIGs include:

NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR AMSAT DSP-93 kits
APRSSIG SIG on APRS
TAPR-TNC SIG on TNC Issues
DSP SIG on general DSP topics
MIC-E SIG on supporting the TAPR APRS MicEncoder kit

TAPR-BB Announcement channel for TAPR bulletins and information

General Information about TAPR:

* Ever heard of a TNC?
* Interested in general packet radio information?
* Interested in Spread Spectrum Communications?
* Interested in high-speed packet operations?
* Interested in other types of digital communications?
* Interested in experimenting or building kits?
* Interested in keeping up-to-date on national digital and packet
issues?

Then you might be interested in TAPR!

Goals:

* Support Research and Development efforts in the area of amateur
digital communications
* Disseminate information on packet and digital communications
* Provide affordable and useful kits for experimenters and hobbyists
* Pursue and help advance the amateur art of communications through
publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR history.

The TNC (Terminal Node Controller) project was the first big project that TAPR tackled and completed. Now TAPR covers a wide range of interests including: APRS, Spread Spectrum, networking, Timing, DSP, HF, and much more.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur educational research and development organization. TAPR currently has more than 2500 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside North America is $25 US.

Join the amateur digital-revolution -- Join TAPR!

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://people.qualcomm.com/karn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://people.qualcomm.com/karn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://people.qualcomm.com/karn/papers/index.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

I'm with the Team Eifel ARS located in Bitburg Germany. We are a club
primarily set up for American Servicemen and Women in the Eifel Region
of Germany. We provide ARRL VEC test sessions and help individuals,
regardless of nationality, gain a U.S. license. This is accomplished
by providing study materials and teaching. We also provide assistance
in obtaining German Reciprocal licenses.

I have a fair background in packet, a general knowledge of satellites,
and I'm fairly knowledgeable in hiding antennas.

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 (602) 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address

is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 (817) 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 (817) 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 (817) 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 (800) 322-1117.

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

* Packet and Digital Networking

I am an NTS operator running an unattended digital (Winlink, latest
version) digital system. I operate a hub station for Eastern Canada
Digital operations, including AMTOR, PACTOR, and CLOVER.

NTS Training for CW, Phone, and Digital Modes:

http://cc.recorder.ca/~ve3bdm/

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet,
as well as system administration of UNIX and UNIX-like operating
systems (with an emphasis on networking, E-mail, etc.). My current
concentration is on writing UNIX based tools (e.g. software for

logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an E-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 Baud one now.

My World-Wide Web Page above has a reasonable set of resources for
digital networking, including HTML versions of some of my work, sample
configuration files for Linux AX.25, and some Linux software tools, as
well as the Ohio IP address coordination info.

I've just finished writing a book on TCP/IP that TAPR will publish
(hopefully) by the end of the year. It'll be called _Networking
Without Wires_ and is a completely rewritten, and greatly expanded,
version of the old _IntroNOS_ document I wrote several years ago. In
the meantime, I've made the old _IntroNOS_ available in HTML format on

my World-Wide Web Page above.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.71.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org
IP numbers in Ohio to:

ipaddr@febo.com

which is a mailing list read by a team of coordinators.

[_Editor's note:_ All ampr.org coordinators are listed in the document
at:

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in
love with RS sats and DOVE telemetry. I'm the Shortwave Listening
(SWL) coordinator of the Italian Amateur Radio Association and I have
a regular SWL page in their official magazine Radio Rivista. Recently
I joined the 425 gang that produces the 425 DX News bulletin. I
translate it into English and send it to many DXers via E-mail. I also
maintain a WWW page to provide the bulletins graphically with previous
numbers and more to come. I've been an SWL since 1974 when I received
a receiver as gift from my parents. Now I'm 36 and I'm running also a
free BBS devoted to HAM/SWL.

American Radio Relay League | Justice is being allowed to do whatever
225 Main St. | I like. Injustice is whatever prevents
Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams,
carrying ARRL news, details on upcoming hamfests, conventions and
Amateur Radio examinations, the ARRL Publications catalog, information
of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich,
WY1Z, and the other Boston Amateur Radio Club volunteers who've worked
since December 1994 to keep ARRL up and coming on the Web via the ARRL
home page they installed and maintained at oak.oakland.edu. Their
volunteerism helped show us that upgrading our Internet connection to
a level that allowed on-campus Web service would be essential to
ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger
and better are _essential_ to its ongoing success, so please drop by
and say hello!

I have been in ham radio for 15 years and played and worked on many modes and radios.

My home page above is a Link page I mostly use to find what I am looking for.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[_Editor's Note_: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've

finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

I have been with Linux since it was first available. I have been a keen homebrewer for over 30 years, but I don't do much now due to lack of time. I have built lots of HF gear, including synthesized gear, and also a lot of test gear. I have also homebrewed magnetic loops, which is great fun. I have put together PC's and help other people with Linux issues. On packet, I run TCP/IP using LNET which is WAMPES-adapted for the UK by Darryl, G7LED.

During the school year, I am in Baltimore trying to set up a college ARC at University of Maryland, Baltimore County. During the winter and summer, I am in New Jersey. I am active in ARES/RACES/NTS and local clubs in both areas, and would be glad to help other young people get into the hobby of Amateur Radio, particularly in the interests of Public Service and Disaster Management.

Team Leader, W5YI VEC

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar
principles/theory at the U.S. Army Signal Corps School at Fort
Monmouth, NJ during World War II. I was chief engineer at KDB in Santa
Barbara, CA from 1946 to 1951. I was engineer and technical director
at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have
one student now going for his General and prefer to teach the overall
picture. I have done little or no benchwork on new equipment in the
last 15 years. I'm still learning digital theory and techniques, but
boards filled with chips do not evoke a sense of familiarity or
recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
P.O. Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications

Products, contact them directly. Presently there are aprox 325 Members
on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying
to restrict the list to only ACC users (control people) and owners.
The list is also supported by the new owner of all the rights to ACC,
Link Communications. I am also running the Link repeater controller
list server. It has approximately 90 members at this time. The way to
join the list server is to send me a short E-mail and tell me what
equipment you are using. (Note: I have no ties to Link Communications
or ACC. I started the Link list first and found how useful it is. I
had a lot of requests to start the ACC list and did it.)

I have a large collection technical manuals. Copies are available for the cost of duplication and postage. THIS NOT A BUSINESS. It is done as a courtesy to those needing assistance.

I lecture and conduct workshops on the subject of ElectroMagnetic Interference, primarily related to problems encountered in the Clinical (Hospital) environment. This is a program based on papers of which I am the principal author published in journals related to

Biomedical Engineering. Related to this activity, I have and use signature analysis equipment and, depending on area and time, am available to assist in location and identification of sources of severe interference to radio amateur activities.

+1 (937) 256-4355

Dayton, Ohio E-mail Elmers

Sponsored by the Miami Valley (Ohio) FM Association (MVFMA):

http://www.febo.com/

The Dayton E-mail Elmers service allows new or prospective hams in Dayton and Southwestern Ohio, or even experienced amateurs who are venturing into a new aspect of the hobby, to send an E-mail request for assistance. Volunteer on-line Elmers then can provide a response in the "Elmer" tradition of mentoring new or less-experienced hams.

Today, many hams prepare for their license exams through classroom programs, and the individual Elmer's touch isn't as common as it once was. The E-mail Elmer service is an attempt to restore this long tradition. The MVFMA hopes that the initial E-mail exchange will be the start of an ongoing Elmer relationship in the best tradition of Amateur Radio."

Hams may use the E-mail Elmer service simply by sending an E-mail message to:

elmer@febo.com

and posing the ham radio question they'd like to have answered. Users will get a machine-generated confirmation, and within a few days, they will get a response from one or more of the volunteer Elmers.

For more information, or to volunteer as an E-mail Elmer, contact me at my phone number or E-mail address above.

Keith Petersen W8SDZ

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

aq627@freenet.carleton.ca

Radio Amateurs of Canada (RAC) Treasurer and Webmaster

(RAC is Canada's national amateur radio society.)

RAC World-Wide Web Page:

http://www.rac.ca/

Callsign E-mail Addresses for All Interested Canadian Amateurs

Any licensed Canadian amateur radio operator can now have an E-mail address of the form:

callsign@rac.ca

This means that you will no longer have to advise all your contacts of any new E-mail address if you change your Internet service provider. Canadian amateurs will not have to keep track of dozens or hundreds of E-mail addresses. Just remembering the callsign is all they will need.

RAC is able to offer this free service thanks to the volunteer help and support of Information Gateway Services (IGS) of Kanata, Ontario, Canada, and in particular the work of Rene Kahle, VA3RDK. Rene developed the E-mail aliasing software, and set up the server hardware (IGS also donates server space for the RAC and ARAS World-Wide Web Pages that contain much useful information for Canadian amateurs).

If you wish to obtain a callsign E-mail address, simply send a message to:

alias@rac.ca

with:

callsign = realaddress

in the BODY of the message.

For example, if my callsign was VA4KP and my real (current) E-mail address was:

ham@qsy.ca

I would put the following in the body of the message:

VA4KP = ham@qsy.ca

Any subsequent mail addressed to:

VA4KP@rac.ca

would be redirected by the IGS server to:

ham@qsy.ca

Of course, such mail would NOT go anywhere near RAC headquarters nor be seen by RAC officials. Any E-mail addressed directly to:

ham@qsy.ca

will also be delivered as in the past without passing through the IGS server.

The E-mail aliasing service is currently set up on a trial basis. If
it works well and amateurs find it useful, it will remain available
for all who wish to use it.

* SAREX

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

I organized and conducted a SAREX in southwest Oklahoma that involved over 3,000 students in 21 schools in seven cities of southwest Oklahoma. The SAREX consisted of an essay contest with the winners being able to ask questions of the astronauts while they orbited the earth. The live SAREX was broadcasts over the Lawton, Oklahoma Public School systems cable television to the public in southwest Oklahoma.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

I am a consulting engineer, which takes me to various locations. My home address is shown above and in the call book. I can answer E-mail (as everyone knows) from anywhere that I may be.

Don't know where you are going to use a old horse like myself. I am part of the old and part of the new displine. I have fabricated all my wire antennas which includes the matching device (transformer) and been building equipment for more than a quarter of a century. I also manage to repair all my equipment - when parts are available. I restore early age broadcast receivers and HF transceivers. I know the old Heathkit HW100 and HW101 very well and built a Heathkit 5400 transceiver with matching Power Supply. I have constructed many amplifiers and own a Swan, Collins (S-Line), Kenwood, Heathkit, and Johnson. I am very active in the two meter band.

In addition, I have restored many an old Coleman Lanterns (which is very enjoyable) and also have some American Gas Machine Lanterns (1930's).

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications

problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emergency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Coordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the Subject header of the message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

I have been a ham since 15. I have been an Extra class operator since age 17, and a VE since age 18. [_Editor's note:_ Possibly the youngest Contact VE ever.]

I am an avid HF QRP (low power) and mobile operator. I have spent literally hundreds of hours installing my mobile station (IC-706 and Screwdriver antenna, plus more grounding straps than I can remember) in my 1995 Neon.

Most of the time I operate QRP CW mobile.

Why? It challenges my operating skills as much as possible, plus QRP is safer (RF-wise) than is 100 or 1500 watts. With the effects of RF exposure still unknown, I don't feel like exposing myself to high-power RF fields any more than necessary, and if 3 watts will do the job, so be it, I'll emit it.

In addition, people are generally amazed when you mention that not only are you running just 3 measly watts output power, and on top of that you're doing it from your car as it's zipping down the Interstate at 65 mph. They just can't believe it's possible that less power than a nightlight is bouncing off the ionosphere and ground three times, and is still able to be detected 10,000 miles away.

I'm here to tell them it is.

I enjoy building kits, and consider myself to be a good builder.

I am a fair contest operator, and enjoy 35 WPM CW ragchews as well as hunting for DX.

I am active with both the Laurel (Maryland) and University of Maryland Amateur Radio Clubs, and operate with both during public service events. I have been the chief HF operator at University of Maryland HF-related events (Field Day and Sweepstakes) for the past three years.

As a Volunteer Examiner, I have conducted roughly 150 test sessions, testing at minimum a thousand applicants.

I have recently given Novice/Technician license instruction, as well as taught a 5 WPM code class. I have been told that I have a knack for describing complex subjects in ways that make them far easier for laypeople to understand.

* Volunteer Examiner (ARRL and W5YI VEC)

My favorite aspect of amateur radio is contesting. It drives my station improvements and operating proficiency. I have played around with antennas and made various station modifications to improve my contact efficiency. Along the way I have solved some RFI problems, built many of my station accessories, installed and built some HF antennas, put up a small (40') tower, etc.

I volunteer as a RACES operator in no particular capacity. I help with a few VE test sessions a year mostly representing the ARRL VEC with the Burlington ARC team.

I work as a SRAM design/product engineer at IBM Microelectronics in Essex Junction, Vermont. I have been interested in electronics and computers since a young age, but only got my amateur radio license in 1993 as a Technician at the age of 31. I got to know the code and upgraded to Extra in February of 1994.

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham
radio books and publications on audio tape. Volunteer readers provide
a valuable service to persons with severe physical disabilities and

sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

ARRL Volunteer Counsel

I am happy to help out with troubleshooting the Kenwood TS 520,
T-599/R-599 twins, and the TS 440S. I also have expertise with the Ten
Tec Argonauts, the OMNI-D, the Corsair I and II, and the OMNI VI. I am
happy to meet those interested in learning or improving their CW on
the air.

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the body of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

ARRL Official Emergency Station (OES) and Local Government Liaison

I have experience with antennas (calculations, construction, and repair), all HF digital modes (including HF FAX), wiring of TNC's to radios, custom switchboxes for TNC's, radio modifications, math calculations, personal computers (DOS, Windows, Networking, and HTML), and of course, on-the-air operation and CW. I would love to work with young students wanting to become hams. I hope I can help.

I am currently a mature student at King's College, University of
Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter
the third year of this course on 25th September 1997.

I run a telephone BBS in the Fidonet network. This is currently offline due to problems with the telephone line, but is expected to be back up in late September of 1997.

I also have my own IBM compatible computer, which has a P166 processor, 32M of RAM and a total of 4.6G of hard drive space, spread between three EIDE hard drives. This computer normally runs under the Linux operating system, and I am gradually moving the above Fidonet BBS system across from MSDOS to Linux. Because of the lack of suitable software under Linux, I am writing one myself, having had 15 years experience as a professional programmer.

I am a regular participant in AuroraMUSH, a MultiUser system, and have authored several patches to the suftware controlling it. It may be visited at:

telnet://amush.ml.org:4190/

I have been involved with Packet radio for over a decade now. Indeed, it was packet radio that got me interested in Amateur Radio in the first place.

I started up a mailing list connected with the Amateur Satellite world, currently using manual subscriptions. The list is:

Space.Repeater@cus.umist.ac.uk

and is for the discussion of the possibility of placing an amateur band repeater or transponder in orbit around a planet other than Earth, or on the surface of one of the other planets.

I will add that, although I can claim to be something of an expert on both Linux and Packet Radio, I am definitely NOT an expert on the two together.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically

forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that

the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

I used to run my own bulletin board system before the Internet came
along. I also do my own monthly newsletter called the _Hamband DX'er_
for many years. It is still going. I take care of the ARRL SWL Bureau.
My name is listed in any callbook under the various QSL bureaus. I am
an avid DX'er of the ham bands with over three hundred countries
confirmed. Presently I run my own WWW Page to help others with QSL
info requests.

DX QSL Info World-Wide Web Page:

http://www.coredcs.com/~mtw/

The DX QSL Info File is updated monthly. It is in Xbase format and
runs under a variety of software, including:

* Dbase
* Vplus
* Totalham

RAC World-Wide Web Page:

http://www.rac.ca/
+
+ Callsign E-mail Addresses for All Interested Canadian Amateurs
+
+ Any licensed Canadian amateur radio operator can now have an E-mail
+ address of the form:
+
+ callsign@rac.ca
+
+ This means that you will no longer have to advise all your contacts of
+ any new E-mail address if you change your Internet service provider.
+ Canadian amateurs will not have to keep track of dozens or hundreds of
+ E-mail addresses. Just remembering the callsign is all they will need.
+
```

+ RAC is able to offer this free service thanks to the volunteer help
+ and support of Information Gateway Services (IGS) of Kanata, Ontario,
+ Canada, and in particular the work of Rene Kahle, VA3RDK. Rene
+ developed the E-mail aliasing software, and set up the server hardware
+ (IGS also donates server space for the RAC and ARAS World-Wide Web
+ Pages that contain much useful information for Canadian amateurs).
+
+ If you wish to obtain a callsign E-mail address, simply send a message
+ to:
+
+ alias@rac.ca
+
+ with:
+
+
+ callsign = realaddress
+
+ in the BODY of the message.
+
+ For example, if my callsign was VA4KP and my real (current) E-mail
+ address was:
+
+ ham@qsy.ca
+
+ I would put the following in the body of the message:
+
+
+ VA4KP = ham@qsy.ca
+
+ Any subsequent mail addressed to:
+
+ VA4KP@rac.ca
+
+ would be redirected by the IGS server to:
+
+ ham@qsy.ca
+
+ Of course, such mail would NOT go anywhere near RAC headquarters nor
+ be seen by RAC officials. Any E-mail addressed directly to:
+
+ ham@qsy.ca
+
+ will also be delivered as in the past without passing through the IGS
+ server.
+
+ The E-mail aliasing service is currently set up on a trial basis. If
+ it works well and amateurs find it useful, it will remain available
+ for all who wish to use it.

Source record: 176766

No it wasn't worth it for the extra spectrum. I got mine for the personal satisfaction that I did it. Kept my original call sign. Come to think of it I have never worked any part of the extra class spectrum.

I get the most satisfaction on HF on the novice band, letting new hams know we all started there, and to have fun.

This concern has already been mentioned and is currently being discussed on several email lists. Rest assured that any proposals for a Gentlemen's Bandplan will certainly include the "lowfers." I've suggested that not only should they continue to get full access to the band, but that a segment be given exclusively to them as protection against the higher-powered newcomers.

All this is still speculation. The NTIA has agreed with the ARRL's proposal, but the power companies have long fought to keep high-powered users out out of the VLF region. They'll surely lobby against this new proposal.

Jeff KH2PZ

3227. Computer prg for code

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-04 00:00:00 UTC
From: am502@freenet.hamilton.on.ca
Message-ID: <6dim3m$1k6$1@mohawk.hwcn.org>
Source record: 176770

I was trying to find out if there is a computer program available to help
me learn code and if so, where it might be available.
Thanks in advance
Doug

Why not use a (rectified) 12V bicycle generator as a charging source?
The cost is about $15. It does create a bit of drag, though, being
driven by friction again a tire, but you wouldn't need to have it
engaged constantly.

Don't forget your helmet!

Sorry Glen. The additional text does not, in my opinion, indicate that the remark was made in jest. It still looks like a "slam".

Perhaps, in the future, you could add some conventional indicators of humor, such as the smilely face, or <grin>.

From: jkinsley@raex.com
Message-ID: <6djid8uoj1@nnrp1.dejanews.com>
Source record: 176777

Just picked up an SM-220 w/BS-8 Pan Adapter. Looking to pull the IF off the TS-440SAT to provide Pan Display on the SM-220. The 2nd IF of the TS-440 is the same freq. required by the BS-8. I've searched everywhere for ap notes or info, to no avail.

Has anybody done this or can point me in the right direction? I'll be a pioneer if I have absolutely to, but would rather find out if anybody else has been down this road before.

Any help or info would be very much appreciated.

Source record: 176779

Hello I use a David Clark 10-20 with my Alinco ht all the time. The Icom headset adapter works great with it. Also what I have found is that almost all the later model ht's do have voltage coming out the mic jack for vox operation and some of them even use the elctret mics on there headsets.

The main thing is that you will need around 6 to 8 volts to run the headset properly. I tried using mine on a the Alinco DJS 41 and with only 3 AA batteries the audio was very weak.

I also use my headset on a Kenwood 940 almost all the mobil and base rigs have one pin with 8 volts on it for the mic.

Another sorce for the mic jack is Gulf Coast Electronics I think you can purchase one from them.

If any hams are likely to visit Sydney from overseas or other parts of VK, you will find a lot of information for visitors on the Waverley Amateur Radio Society web site, which has recently been updated.

<http://www.zip.com.au/~sb/wars/wars1.htm>

There are details of reciprocal licensing, how to lookup the latest VK callsign details, repeater info, where to buy gear, useful frequencies, how to contact local hams and much much more, so come and pay us a visit.

Tired of seeing the subject line, "Good bye," I thought I'd inject
an opposite subject line which expresses the good that is ham radio.

Teaching another class on the campus of the U of Maryland, had seven
students last night.

All seven are learning Morse.

Three are already Technician licensees.

They range in age from 18 to about 60.

Added to the 11 people I'm teaching Morse to in another class, this
makes 18 at once.

A whole mess of people who want to experience ham radio. A lot of
people are willing to make it real, too.

Imagine that, for a service that is dead.

Maybe for some of you it's "dead," but for the vast majority of
us who enjoy and use it for the benefit of others we can help,
it's very, very much alive.

I'm sure the majority of us feel sorry for the minority who seems
soured on it. Ham radio is still basically unchanged from before
you soured on it, so if you have soured, it's your own
responsibility.

Don't try to ruin it for the rest of us.

Please tell us where the specific requirement can be found.

>The most recent change was that the upper limit on AM would be raised by
>several channels on all units manufactured after a certain date.

Even if that is so, there is NO restriction on any
radio that would prohivit having the weather frequency
included. What you seem to be saying is that the
government should mandate reception capability of NOAA
on auto radios. Frankly, we have enough regulations already.
If there's a market for it, then it will be developed...if not,
then that's just the way it should be.

>The frequency range of television receivers, likewise, is dictated by the US
>Government; and, in fact, has been changed several times during the past three
>decades.

No, the frequency channles have been changed.
There's no federal requirement that I am aware of that
mandates any TV be made with or without
certain channels. Exaple, there's no
longer any channels 80-83, so why would any
manufacturer include them anyway. The government
didn't say you can't make a set with those channels
(except as it may involve reception of cell phones).

That's not true at all. The number of states with such laws
is only a handful (less than a dozen as I recall).
As to modifying the radio, I doubt the typical average
joe car owner would even consider it.

As an active LowFER, I'd like to clear up some misconceptions:

First of all, it seems that the Newsline report was the result of some kind of time warp. The ARRL hasn't filed any recent petitions with the NTIA. The most recent formal action took place in 1995. However, with the creation of LF ham bands in other countries, some kind of future action seems inevitable.

Ironically, even though no license of any kind is required, nearly all of the activity on 1750 meters is plain old CW. No-license code, as opposed to no-code license. Several 1750-meter beacons are running BPSK, but the only two-way BPSK activity I know of is on the ham bands where signals are good enough to support real-time QSOs. I think the one-way BPSK record on 1750 meters was set a couple of years ago when I copied Cliff Buttschardt's "HDO" beacon from California at my QTH in central Minnesota, a distance of about 1600 miles. Greater distances have actually been achieved with CW, for example the reception of California beacon "Z2" in Hawaii.

The low-frequency spectrum offers exciting possibilities for communication techniques that take advantage of its unique propagation characteristics. However, little is really happening there at the moment. You need to be pretty weird to spend night after night listening to static crashes, or even worse, watching garbage characters print on the monitor. Even I'm getting burned out, and I have a much higher than average tolerance for boredom. With a little more power and an infusion of some new technical talent, maybe LF would get interesting again.

Even if "high power" ham operations (maybe a few watts ERP) were permitted in the present 160-190 kHz region, it would not necessarily have an impact on Part 15 experimental operation. I can't imagine hearing more than a couple of hams on the band in the wee hours of the morning when LF DXing is at its peak. They would be hardly noticeable among the intense Ground Wave Emergency Network (GWEN), foreign broadcast and power-line carrier signals that already occupy the frequency. If the hams don't get 160-190 kHz, eventually some commercial interests will. Then you can really kiss LowFER operation goodbye.

By the way, why do people refer to 1750 meters as "VLF", which is 3 to 30 kHz? 1750 meters is simply "LF" (30 to 300 kHz).

Lyle, K0LR

You'll need an FCC Form 610. You can download this directly from the FCC by pointing your browser to: http://www.fcc.gov/formpage.html.

Fill out the form and send it to the address in Gettysburg.

Local clubs (VE sites) may also stock this form.

>2) Can someone recommend a handi-talkie - by brand and model number -

There are a host of HT's out there, and I'd hesitate to pick one for you, but if your most important criteria is size, it is hard to ignore the Alinco DJ-C1T (2 meters) or DJ-C4T (70cm) radios. These are no larger than a credit card and do a good job on the air.

> 3) What band(s) will be best for abundance of repeaters on my trip -
> San Diego, CA to St. Augustine, FL.

2-meters is still the most popular VHF/UHF band, especially in the rural areas, but 440 is gaining fast. If you only can afford a single band radio, go for 2-meters, but consider a dual-bander. Again, there are many models to choose from. Vist a dealer and kick some tires.

Have a nice trip.

Sure, if you understand how they operate. The nice thing about modern
equipment is that whole subsystems are embedded in a single chip.
Since it is easy to determine if a subsystem has failed, your troubleshooting
is over almost before it began. You don't care which part of the chip failed,
since you have to replace the entire chip anyway. You basically troubleshoot
at the functional block diagram level.

Maybe it's just supply and demand? To the average person,
162 MHz weather radio (Environment Canada have a similar
setup) ranks right up there with watching paint dry. Yawn.

No demand, no reception. No conspiracy needed...

The most agile car radios I've seen tune long wave, AM and FM,
with RDS. RDS gives most of the capability people have been
looking for, with the radio automatically tuning to a local
station that is broadcasting something important. It also
automatically hands off from one transmitter to the next as
you travel, and tells you which station you're receiving.
I've even seen little local stations use RDS for advertising.

There are a handful of car radios that tune shortwave, but
they are very hard to come by. I've read about them, but
have never seen one.

Could someone please post the procedure to field program the Vertex VX-10? It would make it much easier for OEM use than lugging a laptop around. TIA all.

Hi,

just to let everyone know up front I am a white , heterosexual male who has no problems with people of differnt sexual, ethnic, color, religous, or political affiliations than my own.

I dont care who is gay or not.

I dont care how many times you smoked pot with a homosexual communist (just had to throw that one in from my navy days.;-)

I just want to know if anyone can tell me of mods for a prc-10 (now please dont anyone say that PRC has a sexual conotation....)
does anyone know where I can get a schematic or a service manual for the radio?

thanx alot

mike horton educrest@msuvx2.memphis.edu

>See a page with identity,not gutless anon trash.

OK, so I went to Mindspring to "see a page with identity."

Wow.

I'm still trying to figure out what the "identity" of the page
is, but apparantly it doesn't include "20/20 vision" and "loads
in under 3 minutes." Consider backing off on the fonts. Let's
do a quick inventory of the main page:

1. We have the always entertaining "orange spiral notebook"
background. It's quite wide. Wide enough to pop up that annoying
horizontal scroll bar. Scroll to the right, and you find that
this particular notebook seems to be spiral bound on both sides!

2. We have fonts. Boy do we have fonts! No fewer than six
typefaces are used. Well, at least there is some attempt at
consistency: Every sentence is a separate paragraph, centered,
strong, bolded, and bumped up in point size. +3 seems popular.

3. We have a link to Budweiser.

4. We have a pair of mailto: links. The owners apparantly welcome
feedback from their readers.

5. We have a couple of images advertising "Stumpjumpers" (which
I think may be a trademark of Specialized Mountain Bicycles) and
"BARF" (a bastardized ARRL logo with what appears to be a KKK cross
where the inductor would go and the Nazi SS logo where the ground
symbol would go.) Text around these images says that they are #1.

6. We have two links to .WAV files. The captions on these links
say that they are "threats" from two hams. I clicked on one but

gave up after waiting a couple of minutes without hearing anything.

7. We have a Three Stooges photograph. Actually, it turns out that this is what makes the page so wide.

8. We have the only, ONLY, *ONLY* two links to sub-pages. Since these babies are unique, they have animated buttons saying "Press Here" to let the uninitiated know how they function. The first link is a "Photo Page" which takes at least twice as long to load as the main page. If you wait it out, though, you'll be treated to copyright violations against several television networks, the International Olympic Committee, and a record label. Oh, and lots of pictures of birds and people. The second link is labelled "3901 and 14.313 Page." This takes you to an unbelievably long page (in the ever-popular +4 font size) that appears to be an extended attempt to slander and libel several people. Despite the text on the link to this page, the string "3901" appears only three times on the page and "14.313" appears eight times. "Moron" appears six times, if you include the <title> tag on the page. Oh, we are also treated to a fine piece of investigative work which all but solves the Atlanta Olympic bombing. And an animated cartoon of some animal defecating. This page contains some ranting. OK, quite a bit of ranting. It's almost all ranting, really. And scanned tidbits of court documents that are evidently in support of the ranting. I couldn't quite figure it out. +4 is quite hard to read if you're sitting within 15 feet of the monitor...

9. Back on the main page, we next have two animated images (pistol target shooting and a waterskiing lizard) followed by a distorted "smiley face" asking us to "Have A Paranoid Day!" By now I was well on my way to having a paranoid *month*.

10. We have a photo of a jet fighter captioned "Mess with the best, die like the rest." I'll be sure not to irritate anyone flying a fully armed fighter jet.

11. We have an incorrectly sized audio controller. Clicking the play button gives us a C&W (OK, *more* C&W) version of Creedence Clearwater Revival's "Lookin' Out My Back Door."

12. At the bottom (finally) we have an imagemap link to hobby.pagecount.com I don't know why.

And they say aesthetic taste is dead!

There may be more of us than you think. Still, it's hard to see why you think it's any of your business what gender Melissa's spouse (or my spouse, or anybody's spouse) is. It might be a good idea if you just decided to apologize to Melissa and tried to be more civil and polite in the future.

You accused Melissa of posting off-topic, but all she did was use a pronoun to refer to her spouse. It was you who started spouting all that garbage about "... deviant, perverted sex ..." I don't want to read about your filthy imagined sexual juxtapositions. I'm sure a lot of people wish they didn't have to read about them, either. I don't care what your opinions are about certain groups of people; this newsgroup is devoted to amateur radio. There are other newsgroups devoted to bigotry, and you are welcome to use those groups any time you feel like it.

Please try to be more polite in the future.

I just got the scanner and I need to know what type of diode, (the one that enables keylock features etc, ex. "d1, d2, d3, d4") is it. I am heading to radio shack, but I feel they wouldn't know what I'm talking about (no offense, just from previous experiences) I am in need of getting this diode, if you can e-mail me or post the part number I will be forever thankful. Thanks to all in this group who have helped me with a lot of my scanner problems.

Gary, I saw a very young man copy element 1A. He knew his alphabet, but
couldn't read! Therefore, he couldn't answer the 1A qustions (but
passed under 1 minute solid copy. Also, he couldn't pass the written
exams yet.
Would it be appropriate to have a "students license," for getting kids
going. It could expire in two years or age 18, whichever is later.
Keep the priveleges, principles, and language simple. Maybe parental or
adult supervision if under a certain age - as a safety precaution.
No-code VHF+, but with the former 40/15M Novice priveleges - IF they
desire to try some code.
Quick, respond before the kid hater slams this idea.
73,
Brian/N0iMD

>

It is unfortunate that you choose to not use emoticons, or clues like <grin>. As you surely know (as an experienced e-mail/NG user), it is easy for the written word to be misunderstood due to lack of inflection or body language/facial expressions.

As I understand it, you feel that if your remarks are not interpreted correctly, it is a reflection upon the reading skills and sense of humor of the readers. I would suggest that it is the other way around. You are originating the work, and thus have the opportunity to pave the way for good communication.

In any case, I am glad to learn from your subsequent postings that the original was not slamming the entry level Amateur classes. That is not in the Amateur spirit, and I hope those who might do such a thing are in the minority. Meanwhile, I just finished reading another post from someone who did not understand that your original message was a joke. I'm sure that person also appreciated today's clarification.

Why the negative comments, Burt? This gentlement posted one in a series of very positive messages. Get off the "pity pot" and join the group. Have some fun. Life is too short to go around with a chip on your shoulder.

I realize that there are participants in the NG with significant personal problems, physical limitations, etc. You may be one of them. Perhaps your computer "reads" to you because you cannot see. You may be typing from a wheel chair--even pecking the keyboard with a stick in your teeth. The more I learn about some of our participants, the more I admire the human spirit for not giving up in the face of adversity!

It's a free country and an open medium of communication. You can say what you wish. Just remember, folks generally want to be around and accept others who display a positive attitude.

Mechancial bonding problems generally give intermittant behavior, so this
is pretty obvious. If the chip is bad, it won't be intermittant. It will be hard
failed. So if the radio is just acting flaky, you know you have a bad bond
somewhere. A visual inspection with a loupe will usually show it to you
right away, and if not, some tapping with a non-conductive tool in the
suspected area will quickly find it.

3275. RF power vs. food energy - something interesting

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-05 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6dmhei$f23$1@w3eax.umd.edu>
Source record: 176608

A few interesting conversion factors for today.

This morning, I had a 20 minute contact with with K4NAX in Indiana,
a distance of about 650 miles from DC.

I was running 3 watts to a Screwdriver antenna on the back of
the car. Figure, at best, 20% efficiency from this antenna.

How much IS 3 watts?

One watt of power equals 0.2388 calories per second.

1000 calories equals 1 Kilocalorie = 1 Food Calorie.

In that 20 minute QSO, I transmitted 1/2 of the time
at about 70% duty cycle.

That's 7 minutes of transmitting at 3 watts output,
or 21 watt-minutes.

21 watt-minutes = 21 (0.2388 cal/sec) * 1 minute

= 300 calories = 0.3 Food Calories

So in the 20 minute QSO, I sent out, in power out the back
of the radio, roughly the equivalent of the energy
of 1/100 of a standard, plain rice cake (35 calories).

NOW, FATHOM THIS...

3 watts to the antenna, minus cable losses. Let's assume
a sparkling 20% efficiency, and this power was spread
in ALL directions along the horizon.

So just how much IS 0.6 watts???

Let's assume NO path losses , but that the signal goes
out in a 360 degree pattern (vertical antenna).

If even a 1 degree swath gets picked up by a really,
really big antenna at the other end, we're talking
1/360 of 0.6 watts, or 1.67 milliwatts.

NOW, FATHOM THIS...

The radiation from which reception occurs is actually a
is only an infinitesimally small of the transmitted
power, far, far less than 1 part in 360.

NOW, FATHOM THIS...

I've made contacts into Australia over a distance
of 10,000 miles on nothing more than 3 watts input to the
antenna system on my car, and a vertical antenna at the
other end.

Even at 100 watts, we're still talking virtually no power
at all in the grander scheme of things.

EVERY RF contact we make is a wonder of nature. We
can sometimes forget about it because it seems to
be so easy. Imagine, though, a nightlight, with no
parabolic dish reflector, in New York, being seen through
nearby bright lights of only a slightly different color
(i.e. wavelength) in Moscow.

THAT would be an equivalent to what we're doing.

At 100 watts, it becomes a desk lamp. Still pretty cool.

> Hello. I am researching the use of "morse code" and the telegraph during the
> U.S. Civil War. Does anyone know of any sources (books, articles, web pages,
> etc.) that may help me collect information on this subject?

That is usually found deep in the technical sections of a good university
library. There may be books from that era there. We have a dozen or so
in our archives at NCSU.

> I know this is BEFORE radio <wink>, but I am interested in researching "morse
> code" before it was utilized as CW on amateur radio freqs.

Sounds like a good project to me.

> I have found very little information. I would like to reproduce (or purchase
> and fix up) a telegraph set from this time period. I would also like to learn
> what "code" they used. Did they use the original morse code system set up by
> S.F. Morse? Did they use their "own" system of code? Did they use today's
> version of code? etc., etc., etc.

Telegraph sets are relatively common, but tend to be expensive.

You can make a good equivalent of a sounder to use with any inexpensive
or homemade key by taking a 120 volt AC power relay (as large a unit as
you can find, and preferrably plastic cased for resonance and sound
amplification) and running it on a 24-32vdc power source. It can be
made to sound rather like a normal sounder if you mount it on a wooden
resonating board of some kind.

There were many versions of the code. Principally, in the US, the landline
code was used (American Morse). That was developed from Professor Morse's
6 or more original code sets, and became the standard by around 1850 or
so. There were a dozen or more also in use, but they gradually fell by
the wayside. The Continental equivalent is what we use in radio today.

> I have found a few web pages which I am currently trying to absorb. However, I
> find very little (so far nothing) on the period DURING the Civil War.

There are a few books available, but they are rare from that era.

I can recommend that you look for Alfred Vail's 1849 book on the
telegraph (available electronically by ftp from the Glowbugs Archives at
piobaire.mines.uidaho.edu in the pub/Glowbugs/historic section.
It is a LARGE file and must be printed on a postscript printer.

You might also look for Alexander Jones' 1852 book ``Historical Sketch
of the Electric Telegraph'' which covers development from the early days
up through 1852. If I ever get time, that will also be included in

the Glowbugs Archives.

I don't have any titles from the early 1860's era, yet. There are several from the 1870's and 80's that are useful, but I don't have them handy.

At one time the power companies did a lot of switchyard control via
carrier current signals in this spectrum. Almost all of that has moved
to fiber optic today, or soon will.

If you are involved in the design of transmission lines, directional couplers, distributed filters, or RF & microwave electronics in general, take a few minutes to acquaint yourself with TransCad(tm) Version 4, the most comprehensive single & coupled structure synthesis offering available:

http://www.webblabs.com/transcad.htm

TransCad is without peer. And with TransCad there is no single-user limitation. The one-time $1,450 license fee allows department-wide TransCad usage, with no annual support fees and free upgrades for two years! TransCad is a necessity for every department involved in the design of high frequency electronics. For more information, see our web site or e-mail your questions. TransCad is in stock for daily shipping to any destination worldwide.

Sincerely,
Kathy Goerg

While I completed Naval ROTC at Purdue, my service has been with
the Army. I am not familiar with the Navy's requirements for NCO
promotions, especially to Chief. To make E-7 in the Army, civilian
education is very important. Like I said, advanced education to
the officer corps. However our officers do not do as much "ring
knocking" as ROTC grads are more likely to become flag officers
than those individuals who come out of West Point (they serve their
fives and out to industry).

Warrant Officers really do have the best job. They have the best
of being an NCO and Officer but avoid most of the bullshit. And
usually nobody pushes them around. Lots of respect for their
technical knowledge. Much like what the Chiefs have in the Navy.

We all judge. The question is, are we fair and accurate?

> ----------

Still leaves the question, who are the individuals that give
amateur radio its problems? I still say it is angry, white,
working class males. They feel left behind.

The guys I worked with had much the same problems. Most were
ex-Navy, under 10 years of service. Most had very good technical
skills but without degrees. What killed them in the job market
was not their technical skills but the lack of social skills that
comes from college. Most universities are now doing a lot to prepare
their students on how to deal with the modern corporate culture.

We have 60 people signed up for our No Code class this coming weekend. We have 15 signed up for the General Code class. That's 15 people who will almost certainly pass their 13wpm code and upgrade to General or Advanced class this weekend. Many of them will never use code again, but are prepared to study hard in order to upgrade and get worlwide HF acess. Of that 15 people, probably 5-8 of them will also pass the Extra 20 wpm Code exam this weekend. We will also have walk-ins, people who do not take the course, but who take advantage of the exam opportunity. Of the 60 people attending the No Code Technician class, we expect (based on previous experience) 10% or more will also pass the 5 wpm code exam. So, over one weekend, one class, one VE team, we will probably induct 60 new hams into the hobby, and help 15 or more upgrade. We are not the only people doing a class this weekend, not even the only people doing a class this weekend in this town. Not only will we be helping people join the hobby, but they will have a lot of fun in the process.

> internet courses ? you will get 200 easily.

You know this because you've created one?

How many of your students understood the material you presented? What live demonstrations did you do over the internet? How many of your 200+ students actually took the exams? How many of those passed? How many of your students are still active? How many of your internet students have *ever* used a Ham radio since they passed their exams. How many were active enough to want to upgrade? How many have since upgraded? How many enjoyed the experience enough to want to do it again, or to recommend it to someone else? How did you do your VE session (as you're not eligible to be a VE yourself)?

Tell us Masa, inquiring minds want to know.

Julian

Unless the radio is say, 10 years old. Then you toss it in the trash
and buy a new one, for the custom-made chip that went bad is no longer
available anywhere. That's why we (here on the .boatanchors NG) still
operate BA gear; we're able to keep 50+ year old radios on the air by
trouble-shooting down to the one single bad component, whether it be
a resistor, cap, inductor, or tube. Replacement is easy due to the
wiring layout (point-to-point).

One wonders why you'd come onto the .BA newsgroup, and slam BA gear,
Gary (your R-390 comments). You've got to try to cease being so
confrontational. You're becoming a bit like Carl.

I believe the power companies send telemetry signals over their lines
within the 160-190 kHz range. They fear that amateurs transmitting RF
at those frequencies might create problems with their equipment. (Think
of their lines as very long receiving antennas!)

Jeff

That's why I still have my heathkit SB 101, my SB401 and 303 receiver
and the drake twins, not to mention a Yazoo ft 101 EE, and my knight
kits that I converted to operate with the SB-10. MY Kenwood ts-530S
is not too bad along those lines but I have not looked too close at my TS-140.

>several gay co-workers, and all are fine, intelligent hard-working people,
>and none fit the horrible sterotypes you believe in.

Curtis knows gays, he just doesn't know it. There are *lots* of them
all around him. He just doesn't know they're gay. He carries these
stereotypes around with him because he doesn't know any *out of the
closet* gays.

I happen to be an out of the closet gay, and Curtis, I'm not going
back in the closet for you or anybody.

I see no reason why I should alter my lifestyle to make life
comfortable for bigots who don't have the integrity or self discipline
to confront their own bigotry.

And yes, I'd have no problem with any child of mine being in the same
pup tent with a gay man. As it turns out, paedophilia is actually
less common among gay men than among straight men. So my child
statistically would be safer (American Psychological Assn., 1994).

Actually, 160-190 Khz. has been a "part 15" band for a long time, and it has been legal to transmit a watt into a 50 foot antenna all this time.

This is far from a useless band. It does in fact support propagation with reasonable antennas, and the "lowfers" have proven that even low power and small antennas do not prevent communications from being carried out. It is not uncommon for lowfers to talk cross-country using the legal Part 15 limits. I myself have seen communications as distant as 700 miles using one watt into a fifty foot antenna.

I, for one, would love to have the freedom to play around in this band. Experiments using digital communications, synchronous CW and RTTY, etc., down there would be a lot of fun. As would single sideband.

Yeah, the closet is dark & lonely. My question is, can you be out
and still survive as a ham? With all the hatemonger bigots around
here, just in this newsgroup, I wonder what getting back on the air
will be like, especially when any lid bigot can throw a carrier on
someone he hates?

I know of at least a few people in my situation who have just quit
ham radio because of that, but I hate letting the bigots win too.

Have you noticed that Sid has been very absent from his
rants and jamming on 3950??? Well here's the scoop!

WA9KJI was recently paid a visit by the Secret Service.
(This is from VERY reliable sources within the Evansville
Amateur Radio Club) David Castle was questioned by the
SS regarding a tape that he was using to jam the frequency.

Evidently, on that tape was a sound bite of Sid, K5BLB
making a remark about President Klinton and how the man
should be hanged. I guess the Secret Service took it as
a possible threat on the Presidents life.

Now...where does this leave Sidney? Was his radio equipment
seized? Is he in jail? Is he just embarrassed at the fact
that the Liberty Netters are right about our goose-stepping
government which he is now a victim of?

More to come.....

I see you like to say there are lots of them around. Does that make youfeel
like your convulated life style is normal, "there are lots of us". I
don't think there are as many of you around as you like to claim.

> I happen to be an out of the closet gay, and Curtis, I'm not going

The question was, would the person I asked it of be comfortable knowing
their Scout age kid was spending the night in a pup tent with a Queer Scout.
That indicates someone close to his own age. That question remains to be
answered.

You have Child, that seems strange from what you say. How would/does he
feel having two Daddies?

3304. Antenna Help requested

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-05 00:00:00 UTC
From: sehrlich@shore.net
Message-ID: <6dnf7l$th@shell2.shore.net>
Source record: 176637
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.amateur.equipment

Hello to all:

I just received a new Hustler 6-BTV vertical HF antenna. One thing I discovered (possibly omitted from the description in the catalog), or something I maybe should have assumed, is that it will need radials if mounted high in the air. I plan to mount it about 90 feet up a metal mast which will have its metal base on the ground.

It comes with no radials, and the instructions recommend rather long radials. What are my options? I'd like to work all bands without having to add on a zillion 32 foot radials.

I have a brand new Yaesu FT-900 HF transceiver with a built-in antenna tuner.

Thanks for any help anyone can offer.

You like to throw that word around 'Bigot' do you know what it means? If I believe Ford pick ups are better than Chevrolets and refuse to buy
a Chevrolet then you could say I am a bigot. If I truly believe Chicken Fried Steak tastes better than meatloaf and don't eat meatloaf then you could say I am a bigot. Is President Clinton a bigot because he believes the Democratic Party is right ? So what's the big deal about being a bigot? If you want to call someone a name come up with a better choice.What is a hatemonger? It is not in my dictionary. You really need to
come up with a better choice of words.

> I know of at least a few people in my situation who have just quit

The Drake website http://www.rldrake.com includes a parts list specificly for the TR4CW, which includes an additional receiver Crystal filter, and switch, which don't appear in the TR4C parts list. From what I recall, that was pretty much the difference. The TR4C was a good mobil radio. I ran one mobil for a couple of years and it had one of the best mobil noise blankers available at the time.

Then why was it so carefully snipped out of the response?

>Perhaps, in the future, you could add some conventional indicators of humor,
>such as the smilely face, or <grin>.

Not a chance. I don't use emoticons, and if I have to add a <grin> to
explain something as obvious as what I wrote, what does that say about
the reading skills and sense of humor of the readers?

The fact is, as we both know, is that some extras do exactly what I
mentioned. It's also obvious that they must view it as an "advantage"
to being an extra. If that's your mindset, then upgrading will give
you that "benefit." To make a sarcastic reference to this fact hardly
means that I'm slamming lower class license holders. In actuality, it
was a sneaky slam at those who look down their noses at those with the
less privileged tickets.

3322. Re: Why car radios won't tune NOAA WX

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-05 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6dlamk$f6b@news.Hawaii.Edu>
Source record: 176692

Curtis Wheeler <cwheeler@ncal.verio.com> wrote:
>Since I would guess that only a small minority of people (hams...and
>even a minority of them) give a peep about listening to NOAA in the car,
>it is not a feature the "car radio" industry wants to bother with.

Let me share with you some items contained in NOAA pamphlet:

"The future also includes expanding Weather Radio's broadcasts of
warnings and post-event information to all types of hazards - natural,
such as earthquakes, and volcano activity - and man-made, such as
chemical or oil spills. Together with the Federal Emergency Management
Agency, the Department of Agriculture, and the U.S. Geological Survey,
NOAA Weather Radio will soon be transformed into an "all hazards"
radio network, making it the single source for the most comprehen-
sive weather and emergency information available for all citizens."
<Continues on about modernizing its equipment and expanding its
coverage.>

"Expansion of the NOAA Weather Radio network supports the nation's
warning and preparedness effort. It will play a larger role in
providing post-event information, assisting the Red Cross and other
organizations as they provide relief to people after a tragedy."
<Elizabeth Dole, American Red Cross President>

"Our goal is to someday have a NOAA Weather Radio in every home,
just like a smoke detector, and in all schools, hospitals and other
public gathering places. NOAA Weather Radio gives people the kind
of information they need to safeguard themselves and their home
during disaster, for less than the cost of an average pair of shoes."
<Dr. Elbert w. Friday, Jr., Director NWS>

"Special emphasis will be placed on getting these radios installed in
public gathering places so they will be as common as smoke detectors."
<Vice President Al Gore>

Above taken from NOAA/PA94060.

The mention of NWR becoming an "all hazards" radio network has been
demonstrated here, repeatedly. For example, if an underwater earthquake
occurs anywhere around the Pacific Rim with a magnitude over 8.0,
the Pacific Tsunami Warning Center (located at Ewa Beach - within
the tsunami inundation zone!) issues first, a Tsunami Watch
for the state; then if unusual wave activity is noted at tide gage
stations near the epicenter, a Tsunami Warning is issued. At this point,
Weather Radio's normal broadcasts are stopped, the alert tone is
transmitted along with the new digital signals, and NWR now becomes

NOAA Tsunami Radio (nothing at all to do with weather).

[We then activate the state's 200+ civil defense sirens, evacuate the beaches and residents in the inundation zones (except of course, PTWC - they remain in their concrete windowless building). The wave, traveling at 600 MPH in open ocean (it's a "deep water wave" - crest to trough is two miles in amplitude, yet in open ocean it's barely detectable electronically or visually), can arrive in 4 to 12 hours time, depending upon its origin (4 hours if from California; 12 hours if from say, New Zealand).]

Jeff KH2PZ (Lead Radio Operator, Oahu Civil Defense Agency)

I'd like to let this thread and its offspring die, but errant nonsense like this bugs me - humans are *not* the only species to engage in same-sex relations. Many species do, and lots of them (e.g. dolphins, chimpanzees) are more than bright enough to know what they're doing.

What does this thread say about ham radio? That hams have so little to talk about that they will engage in flame wars over utter irrelevancies...

I promise not to breathe a word about my past, present or future conjugal relationships. But I expect other newsgroup participants to do the same. That includes things like casual references to the "YL" - if it's off-limits for me in this newsgroup, it's off-limits for you too.

> open 1750m band to no-coders.
>
In the US, it's been a license free band for as long as I've known about radio, and well before that. It wasn't set up to be a hobby band, but to allow some use of transmitters to those who needed it for experimentation or science fair displays, just as very low power transmitters are allowed in the AM and FM broadcast bands, and the citizen's band (though I don't know if that allowance had been completely moved to the newer 49MHz allocation). Because of the intention, and lack of license, it had restrictions o power and antenna size, restrictions that would seem to limit DX'ing because of it's low frequency.

From time to time, you'd read articles in the electronic and ham magazines about this band, and they tended to be about using the band as a hobby, not as a demonstration at a science fair. A transmitter on the band really can't be difficult, because it's so low in frequency and such low power.

But just as in the early days of ham radio (which in effect was the early days of radio), people wanted to reach further, for the simple sake of seeing how far their signals could go. They started experimenting with better receiving antennas, because while transmitting antennas were limited in size, there were no restrictions on receiving antennas. Presumably they started using better receivers, going from WWII surplus to more modern stuff. I was always under the impression that code was the predominant mode, simply because it was something that got through.

And I gather that the lowfers started applying some of the techniques used in moonbounce to extract signals from the noise. In the first issue of Communications Quarterly, there was a weak signal receiver for the lowfer band using very fancy techniques to attempt better DX. There was nothing simple about that receiver.

A few months ago, someone asked about the band, and you looked up some chart valid for Canada and dismissed the question. The band never existed in Canada, from what I have always gathered. But at the time of your question, I came across something (and I wish I could remember where I saw it) that the band may be available in Canada. Someone was saying something about it being available to hams, but I haven't been able to verify it (or even find the original reference).

So in the US, it's a no code/no test band right now. If it becomes a ham band, the no test will go away, unless there will be some sharing

arrangement where those without a license can use it with the same restrictions (or somewhat relaxed restrictions) while hams get better priviliges (if they don't, then there's no sense in making it a ham band). Whether the no code goes away depends on which license levels get to use the band.

But whatever happens, don't count on it being a DX band, with plenty of useage. It will require effort and skill to use. If you start using a wide band mode (and even SSB is wide band for a 30KHz band) you will be using up a large segment of the band. If you don't have a good antenna or equipment, you won't get out of your backyard.

By the way, this isn't the first talk of making the band a ham band. If I recall correctly, it was discussed in the talks leading up to WARC '79, though I can't remember at what point the idea was turned down.

3326. Lack of disclaimers in commercial ads for Amateur Radio transceivers

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-06 00:00:00 UTC
From: pruth@alpha.cc.oberlin.edu
Message-ID: <6dpfpm$41p@news.cc.oberlin.edu>
Source record: 176496

A friend just alerted me to the fact that the latest Tech America mailing features an Alinco DX70TH and a mobile HF amplifier without disclaimers making it clear to consumers that they must have a valid Amateur Radio license to use this equipment. Radio Shack, to their credit, has had such disclaimers all along. It behooves us to stay on top of such sins of omission lest the bootleggers, Citizen's Radio Service ops and suchlike have an easier time expanding their RF sphere of influence larger than it already is. Call, write, e-mail any business that sells Amateur Radio transmitters without disclaimers and give them a courteous reminder. Toward cleaner RF parks,

>I see you like to say there are lots of them around. Does that make youfeel
>like your convulated life style is normal, "there are lots of us". I
>don't think there are as many of you around as you like to claim.

There are a lot more around than you realize. When you know someone
in day to day life, never suspect they're gay, and then meet them at a
gay venue, you begin to realize that there are a lot more gay people
out there than the bigots are willing to admit.

>I would not go into a closet with the likes of you.

Never asked you to.

>I'm sure you don't. After all you don't seem to be able to confrontyour
>despicable behaviour.

Who says it's despicable? You? And just who made you the expert?

You might be surprised to learn that many gay men consider
heterosexual sex to be repulsive. And it's a short trip from
repulsive to despicable. That's just a matter of prejudice. Since
homosexuality is so common among other species as well as our own,
it's very hard to claim that it's not normal, so to simply claim your
prejudices define what's "despicable" is to set yourself up as the
arbitor of all human behavior and morality. And so far, I haven't
seen any qualifications on your part that justify that.

> The question was, would the person I asked it of be comfortable knowing
>their Scout age kid was spending the night in a pup tent with a Queer Scout.
>That indicates someone close to his own age. That question remains to be
>answered.

None at all. Because I know how homosexuals *actually* behave, not
based on stereotypes but on my own experience, I would have no problem
with it.

If you think gay 12-year olds go around raping innocent victims,
you've got some pretty strange ideas. Maybe you should give up your
prejudices and get a life.

>You have Child, that seems strange from what you say. How would/does he
>feel having two Daddies?

The studies that have been done of children who *do* have two daddies,
all say that they don't have a problem with it except for how their
treated by other bigoted children.

So as far as I'm concerned, I'd rather have a child brought up by two intelligent, enlightened daddies than by a heterosexual bigot any day.

The Center for Disease Control.

Lesbians have the lowest incidence of HIV infection of any population segment so far studied in the U.S. Drug using black males have one of the highest, and the fastest growing segments happen to be heterosexual women and hispanic men.

So much for the theory that this is God's punishment of gays.

GREAT SOUTH BAY AMATEUR RADIO CLUB & SUFFOLK COUNTY RADIO CLUB
ARRL APPROVED LONG ISLAND HAMFEST-COMPUTER SHOW - MARCH 8, 1998

LINDENHURST, LI - NY

On March 8, 1998 the Great South Bay Amateur Radio Club & Suffolk County Radio Club will again sponsor an indoor Hamfest-Computer Show. The location Will be at the:

Knights of Columbus
400 South Broadway, Lindenhurst, NY.

This is an ARRL approved Hamfest.

There will be radio equipment, electronic components, computers and access-ories, software, books, technical manuals, ARRL information, Amateur Radio License Exams and information. Door Prizes. General admission is $ 6.00. $5.00 with coupon. (Coupons will be available at the door.)

ARRL VE - 12:00 NOON
For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam session. 1998 ARRL/VEC fee is $ 6.35, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

For vendor and additional information pleas contact, Tom Favilla N2MIG at (516)957-5985, during EVENING HOURS (7PM-10PM), or info@gsbarc.org
NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the space available. Tables are 2.5ft x 6ft.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is available during the club 2-meter info net:
GSBARC-Monday at 7:00 PM on the W2GSB repeater, 146.685 -600 4Z(136.5)PL.
SCRC - Wednesday at 8:00 PM on the W2DQ repeater, 145.210 -600 4Z(136.5)PL .

3334. New kid trying to learn code with a Bencher Paddle

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-06 00:00:00 UTC
From: Dean Wooldridge <meds@onramp.net>
Message-ID: <01bd491f$a6237f80$aac932ce@dean>
Source record: 176504

This is a real novice question. My daughter (age 12) and I (age you don't want to know) are working to learn code for the novice exam. We have acquired a Bencher paddle and keyer but no instructions on proper technique for using the paddle. For example, we notice that we can press the paddles to generate dots and dashes or we can press and hold and often generate the sequence we need. Great case in point seems to be the letter "C" - we can press dash and then press and hold dot to get alternating dash-dot-dash-dot or we can press,press,press,press and get the sequence as if we were on a straight key.

I'm going to write to Bencher to see if a manual might be available on usage but I thought in the interim some of you might be able to give us a few pointers.

Appreciate the help

Dean <meds@onramp.net>

My Industry Canada wall chart shows 160-190 kHz allocated to
the Fixed Service in Canada.

I too have heard about IC tolerating ham use of 160-190 kHz,
on a low-profile, non-interference basis. I've never been
able to confirm it either.

What about hating people because they disagree
with _your_opinion_? You're the pot calling the kettle
black.

See *your* attitude below.

> > Other than that,have a nice day.
>
> Drop dead soon!
>

>
> There's no such thing as "normal". "Normal" is just an
> area on a statistical curve, each individual point of which is
> unique. Anyone who thinks they're "normal" is a fool.
>

A very wise Dr. Soren once said, "...Normal is what what
everyone else is, and you and not..."

>

Hmmm, we have to set here and read your comments, but aren't
allowed to respond, UNLESS we agree with you. Typical of the left.

Subject: GET LEGAL CASH IN MAIL W/ ONLY $5.00

READ THIS YOU WON'T BE SORRY, I WASN'T

This will be the quickest way to get cash in the mail.If you follow these
instructions carefully, you will be able to receive within two months
nearly $50,000.00. The great part is is that $5.00 isn't really a whole

lot and it could just be worth a try. My wife is currently 6 months pregnant and
we are in debt. We both have really good professions but he
has massive student loans and credit card bills (I was lucky and my father
helped me through college). Needless to say, since we are married to one
another I acquired her debt also. In any case, I followed these easy steps
thinking that I really had nothing to lose and guess what? The first week I
started getting money in the mail! I was shocked! I still figured it would
end soon. The money just kept coming in. In my first week, I made about
$20.00 to $30.00 dollars. By the end of the second week I had made a total
of over $1,000.00!!!!!! In the third
week I had over $10,000.00 and it's still growing. This is now my fourth

week and I have made a total of just over $42,000.00 and it's still coming
in ....

You send $1.00 to each of the 5 names and address stated in the
article. You then place your own name and address in the bottom of the
list at #5, and post the article in at least 200 newsgroups. (There
are thousands) and that is all.

Let me tell you how this works and most importantly, Why
it works....also, make sure you print a copy of this article NOW, so
you can get the information off of it as you need it. The process is
very simple and consists of 3 easy steps:

Like most of us, I was a little skeptical and
a little worried about the legal aspects of it all. So I checked it
out with the U.S. Post Office (1-800-725-2161) and they confirmed
that it is indeed legal!

Seriously, your story will sound like this one if you participate by doing
the following:

STEP 1: Get 5 separate pieces of paper and write your address on each piece of paper along with "PLEASE PUT ME ON YOUR MAILING LIST." Now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so th
e bill will
not be seen through the envelope to prevent thievery. Next, place one paper
in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase and a $1.00
bill. What you are doing is creating a service by this. THIS IS PERFECTLY
LEGAL!

Mail the 5 envelopes to the following addresses:

#1 R. M.
66 Navesink Drive
Monmouth Beach, NJ 07750

#2 Sam
27248 Grano Avenue
Saugus, CA 91350

#3 Pat anderson
41 pilote
st-ambroise Pq

#4 Nick Austin
12318 Dollar Lk dr
Fenton, MI 48430-9734

#5 Matt Naro
404 Kathleen Drive
Endwell, N.Y. 13760

STEP 2: Now take the #1 name off the list that you see above, move the other names up (2 becomes 1, 3 becomes 2, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well do exactly the following:

FOR NETSCAPE USERS:
1) Click on any newsgroup, like normal. Then click on "To News", which

is in the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!!!

3) Now go to the message part of the box and retype this letter exactly as it is here, with exception of your few changes. (remember to add your name to number 5 and move the rest up)
6

4) When your done typing in the WHOLE letter, click on 'FILE' above the send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTILL YOU SAVE IT. (so you don't have toype this 200 times :-)

5) Now that you have saved the letter, go ahead and send your first copy! (click the 'SEND' button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and click the 'TO NEWS' button again. Type in your flashy subject in the 'SUBJECT BOX', then go to the message and place your cursor here. Now click on 'ATTACHMENT' which is right below the 'SUBJECT BOX'. Click on attach file then find your letter wherever you saved it. Click once on your file then click 'OPEN' then click 'OK'. If you did this right , you should see your filename in the 'ATTACHMENT BOX' and it will be shaded.

NOW POST AWAY!

FOR INTERNET EXPLORER:
It's just as easy, holding down the left mouse button, highlight this entire article, then press the 'CTRL' key and 'C' key at the same time to copy this article. Then print the article for your records to have the names of those you will be sending $1.00 to.

Go to the newsgroups and press 'POST AN ARTICLE' type in your flashy subject and click the large window below. Press 'CTRL' and 'V' and the article will appear in the message window. **BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES.** Now re-highlight the article and re-copy it so you have the changes.... then all you have to do for each newsgroup is 'CTRL' and 'V' and press 'POST'. It's that easy!! THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200

If these instructions are too complex to follow, try Forte's "Free Agent." It is freeware for noncommercial use. To download it, simply use a search utility and type "Forte Free Agent". You should be able to find it.

That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O. Box due to the large amount of mail you receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now the WHY part:

This entire principle works because it is in a format of an upside down tree with thousands of branches. Everyone below you will see to it that the tree continues because they want to get money. Those below THEM will continue because THEY want to get the cash etc.

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM of 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With a original investment of only $5.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00
at #4 $225.00
at #3 $3,375.00
at #2 $50,625.00
at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 and start posting again.
The thing to remember is that thousands of people all over the world are joining the Internet and reading these articles everyday, JUST LIKE YOU are now!! And this will go on and on and on and on.... get the picture? Well, there's 5,000,000,000 people on the world and most of them will eventually end up being hooked into the internet. So there are virtually unlimited resources. Of course this will work the best at the very beginning so the faster you post, the better for YOU!

People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet.

Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly.

Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!!

GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. **By the way, if you try to deceive people by posting the messages with y name in the list and not sending the money to the rest of the people already onhe list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This ishe fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again...

The thing to remember is that thousands of people all over the world
are joining the Internet and reading these articles everyday, JUST
LIKE YOU are now!! And this will go on and on and on and on.... get
the picture? Well, there's 5,000,000,000 people on the world and
most of them will eventually end up being hooked into the internet.
So there are virtually unlimited resources. Of course this will work
the best at the very beginning so the faster you post, the better for
YOU!

People have said, "what if the plan is played out and no one
sends you the money? So what! What are the chances of that happening
when there are tons of new honest users and new honest people who are
joining the Internet and newsgroups everyday and are willing to
give it a try? Estimates are at 20,000 to 50,000 new users,
every day, with thousands of those joining the actual Internet.
Remember, play FAIRLY and HONESTLY and this will work. You just have
to be honest. Make sure you print this article out RIGHT NOW, also.
Try to keep a list of everyone that sends you money and always keep an
eye on the newsgroups to make sure everyone is playing fairly.

Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the
basic idea to make the money!!

GOOD LUCK to all and please play fairly and reap the huge rewards from
this, which is tons of extra CASH. **By the way, if you try to deceive
people by posting the messages with y name in the list and not
sending the money to the rest of the people already onhe list, you
will NOT get as much. Someone I talked to knew someone who did that
and he only made about $150.00, and that's after seven or eight weeks!
Then he sent the 5 $1.00 bills, people added him to their lists, and
in 4-5 weeks he had over $10k. This ishe fairest and most honest way
I have ever seen to share the wealth of the world without costing
anything but our time!!! You also may want to buy mailing and e-mail
lists for future dollars.

Please remember to declare your extra income. Thanks once again...
Subject: GET LEGAL CASH IN MAIL W/ ONLY $5.00

READ THIS YOU WON'T BE SORRY, I WASN'T

This will be the quickest way to get cash in the mail.If you follow these
instructions carefully, you will be able to receive within two months
nearly $50,000.00. The great part is is that $5.00 isn't really a whole

lot and it could just be worth a try. My wife is currently 6 months pregnant and
we are in debt. We both have really good professions but he
has massive student loans and credit card bills (I was lucky and my father
helped me through college). Needless to say, since we are married to one
another I acquired her debt also. In any case, I followed these easy steps
thinking that I really had nothing to lose and guess what? The first week I
started getting money in the mail! I was shocked! I still figured it would
end soon. The money just kept coming in. In my first week, I made about
$20.00 to $30.00 dollars. By the end of the second week I had made a total
of over $1,000.00!!!!!! In the third
week I had over $10,000.00 and it's still growing. This is now my fourth

week and I have made a total of just over $42,000.00 and it's still coming
in ....

You send $1.00 to each of the 5 names and address stated in the
article. You then place your own name and address in the bottom of the
list at #5, and post the article in at least 200 newsgroups. (There
are thousands) and that is all.

Let me tell you how this works and most importantly, Why
it works....also, make sure you print a copy of this article NOW, so
you can get the information off of it as you need it. The process is
very simple and consists of 3 easy steps:

Like most of us, I was a little skeptical and
a little worried about the legal aspects of it all. So I checked it
out with the U.S. Post Office (1-800-725-2161) and they confirmed
that it is indeed legal!

Seriously, your story will sound like this one if you participate by doing
the following:

STEP 1: Get 5 separate pieces of paper and write your address on each
piece of paper along with "PLEASE PUT ME ON YOUR MAILING LIST."
Now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of
paper so th
e bill will

not be seen through the envelope to prevent thievery. Next, place one paper
in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase and a $1.00
bill. What you are doing is creating a service by this. THIS IS PERFECTLY
LEGAL!

Mail the 5 envelopes to the following addresses:

#1 R. M.
66 Navesink Drive
Monmouth Beach, NJ 07750

#2 Sam
27248 Grano Avenue
Saugus, CA 91350

#3 Pat anderson
41 pilote
st-ambroise Pq

#4 Nick Austin
12318 Dollar Lk dr
Fenton, MI 48430-9734

#5 Matt Naro
404 Kathleen Drive
Endwell, N.Y. 13760

STEP 2: Now take the #1 name off the list that you see above, move the other names up (2 becomes 1, 3 becomes 2, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well do exactly the following:

FOR NETSCAPE USERS:
1) Click on any newsgroup, like normal. Then click on "To News", which is in the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!!!

3) Now go to the message part of the box and retype this letter exactly as it is here, with exception of your few changes. (remember

to add your name to number 5 and move the rest up)
6

4) When your done typing in the WHOLE letter, click on 'FILE' above the send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTILL YOU SAVE IT. (so you don't have toype this 200 times :-)

5) Now that you have saved the letter, go ahead and send your first copy! (click the 'SEND' button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and click the 'TO NEWS' button again. Type in your flashy subject in the 'SUBJECT BOX', then go to the message and place your cursor here. Now click on 'ATTACHMENT' which is right below the 'SUBJECT BOX'. Click on attach file then find your letter wherever you saved it. Click once on your file then click 'OPEN' then click 'OK'. If you did this right , you should see your filename in the 'ATTACHMENT BOX' and it will be shaded.

NOW POST AWAY!

FOR INTERNET EXPLORER:
It's just as easy, holding down the left mouse button, highlight this entire article, then press the 'CTRL' key and 'C' key at the same time to copy this article. Then print the article for your records to have the names of those you will be sending $1.00 to.

Go to the newsgroups and press 'POST AN ARTICLE' type in your flashy subject and click the large window below. Press 'CTRL' and 'V' and the article will appear in the message window. **BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES.** Now re-highlight the article and re-copy it so you have the changes.... then all you have to do for each newsgroup is 'CTRL' and 'V' and press 'POST'. It's that easy!! THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200

If these instructions are too complex to follow, try Forte's "Free Agent." It is freeware for noncommercial use. To download it, simply use a search utility and type "Forte Free Agent". You should be able to find it.

That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O. Box due to the large amount of mail you receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now the WHY part:

This entire principle works because it is in a format of an upside down tree with thousands of branches. Everyone below you will see to it that the tree continues because they want to get money. Those below THEM will continue because THEY want to get the cash etc.

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM of 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With a original investment of only $5.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00
at #4 $225.00
at #3 $3,375.00
at #2 $50,625.00
at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 and start posting again.
The thing to remember is that thousands of people all over the world are joining the Internet and reading these articles everyday, JUST LIKE YOU are now!! And this will go on and on and on and on.... get the picture? Well, there's 5,000,000,000 people on the world and most of them will eventually end up being hooked into the internet. So there are virtually unlimited resources. Of course this will work the best at the very beginning so the faster you post, the better for YOU!

People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Experimental operation on the 160-190 kHz band is now permitted in Canada with restrictions similar to those we have in the US. For more details on the relevant rules, check out:

http://members.aol.com/part15/whatisit.htm

and for more information on longwave in general, visit the Longwave Home Page at:

http://members.aol.com/lwcanews/index.html

By the way, the Newsline report of a recent ARRL petition to the NTIA regarding a ham band in the LF range apparently was in error. Details are available on the Longwave Home Page.

Regards,

Lyle, K0LR

I need help in getting the tone code matrix listing for my ICOM
IC-02AT handi-talkie.

I have had this rig for almost 20 years and never had to use the tone
feature and now that I need it, I can't find my operating manual.

If anyone can help me understand what code to enter for the various
tones used in the 2 meter band I would certainly appreciate it. I'm
almost certain that as soon as I don't need the manual again it will
surface in some obvious place. I sure wish keeping track of stuff
were easier.

Thanks,
Roger...

Doug...there are several good programs...Morse Academy and Supermorse are both good. They can be downloaded from some ham websites, I think. They also advertise in a number of the popular ham magazines. I have also used the little MFJ morse code tutor, and it is an EXCELLENT way to learn or upgrade your code. If you can't find either code program, email me, and I will send them to you via email attachment.

So now blatant loud homosexuality is an utter irrelevance? Tell that to
a homosexual's parents!

3350. Re: New kid trying to learn code with a Bencher Paddle

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-06 00:00:00 UTC
From: Dale Prince <princ36@ibm.net>
Message-ID: <3500F054.FDBAC722@ibm.net>
Source record: 176520

I would recommend when starting, to release one paddle before pressing the next. I think you'll learn the rhythm of using the paddle better as your speed increases and when using more complex combinations of dots and dashes. Actually, I would recommend putting the paddle and keyer aside until you have learned to send (and receive) at least 10-15 wpm cleanly on the straight key. You don't want to get in the habit of sending faster than you can receive which is easy to do on a keyer. Since you have the initiative to learn the code (GREAT) might as well master the "art" of using the straight key first. Folks say code isn't a necessity today. True. But neither is Ham Radio. It's all a hobby and the more you put into it, the more you'll enjoy it.

Good Luck...Dale - WB6ORJ

Anyone know how to import Logmasters database to LogWindows? I have run the LW import software but it says I have to run file compression in LogMaster before doing so and I can find no utility in Logmaster that will do this. If you where one of the many who got left hanging after buying LogMaster and made the change to LogWindows I would appreciate your help as I have over 415 contacts logged into LogMaster and I hate the thought of having to copy them all into LogWindows manually. Any and all help would be appreciated in finding this compression utility in LogMaster so I can import it into LogWindows. 73, Steve

Hi Scott

I realise my suggestion might be contrary to your thinking, I am
refering to the idea of 90 feet sounding terrific, but would you
consider ground mounting the antenna and running the, 3 or 4, 32 foot
radials? I don't know how much yard space you have.
I tried a, homebrew, ground mounted vertical and they do perform quite
well.

Yes, it is. With or without smilies.

>As I understand it, you feel that if your remarks are not interpreted
>correctly, it is a reflection upon the reading skills and sense of humor of the

It can be either. If I fail to get my point across, it may be that I
wrote poorly, or that the reader lacked reading/comprehension skills,
or both. I choose not to write for the lowest common denominator, and
I don't think you do, either. This is not to say that my writing
could not be improved in many cases, of course.

Unless you purposely make your homosexuality a topic of discussion, I don't see
that there would be a problem. Of course, if you come on with a brash, "in
your face" attitude, you can expect to be shunned and ridiculed. Your choice.

From: Jim & Doris Piper <iamweare@cruzio.com>
Message-ID: <6dnflf$10u@enews4.newsguy.com>
Source record: 176559

I'm looking for an old, can-be-dead, NiCad battery pack for a Kenwood TR-7600A HT. This is the pack that originally came with the radio and has the coaxial DC connector jack on the back for charging.

And if you also just happen to have a tone board (i.e., CTCSS option board) for the same radio, please advise. I'd like to get one of those to upgrade the rig and use as a b/u 2M HT.

E-mail works; please use iamweare@cruzio.com

Thanx --

Jim / KD6YKL

I have a for sale 485 oscilloscope
Good working condition
$ 600.00 plus shipping
Selectable input impedance
The TEK 485 oscilloscope provides both versatillity and reliabilliyt in a convenient, easy-to-use package
You'll have plenty of power ... bandwidth is rated at 350 MHz and vertical.
Sensetivity to 5mV/div!
Selecatable input impedance of 1M ohm and 50M ohm.
Also available are horizontal sweep rates to 1 nS/division.
Automatic deflection factor redout, 3 div/nS writing plus many more features. Weighs only 21 LBS
Tel : 714-778-5151
Thanks

3365. Something Positive for the Group

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-06 00:00:00 UTC
From: Lee <rfi@vol.com>
Message-ID: <01bd48b6$1f141720$e26a1b26@default>
Source record: 176567

I posted last week about our testing session at the Tennessee School for the Bliind.
It was held last Tuesday and the outcome was great. We had 8 candidates; 3 TSB
students and 5 walk-ins, one of whom was a 13 year old YL. The 3 students all passed
their novice theory. Seeing their reaction to their passing grades made this a most
rewarding effort. The 13 year old YL passed her 5 WPM CW which with her CSCE for
novice written, gives her a Novice ticket. Among the other walk-in candidates,
another YL earned her Tech ticket, an OM earned a Tech ticket and an OM passed
Novice written.

This session marked our first use of switchboxes for testing blind students.
Based on a concept by myself, NY4T and implemented by Bob Jordan, W4BOB,
we came up with a set of boxes with silent switches representing answers
A, B, C and D on the tests. When a button is pressed, the corresponding
light comes on and the answer is recorded by a VE. Total cost for 4 units was
around $56. This is a really simple idea but it streamlines the testing of
blind students greatly. It would have taken us almost 3 hours to examine
the 3 students individually but we were through using the switchboxes in
under an hour. The 2 students who had tested before with us commented
positively on the new system.

Come visit our website if you'd like to learn more about the organization
that sponsors our TSB testing sessions as well as our local ones here in
Murfreesboro, TN. The site is full of all sorts of ham resources with
an extensive links page, a new Contesting page and the WWW's largest
YL page.

Finally for all you grousers and naysayers ready to bury ham radio before
it's time.....Ham radio will only prosper if you make an effort to
DO SOMETHING to promote it. Your choices are many. Become a VE,
become a club officer, get ham radio into your local schools, invite
interested non-hams to field day. Anyway, you get the picture,
why debate the demise of ham radio when you can be preventing it.

"He who hesitates is lost, and vice-versa."

If you can't use radials with the antenna, you're probably not going to be very happy with it's performance...it requires radials to perform as designed.

See if you can return it, and go with an antenna that doesn't require radials - there's plenty of them around depending on the bands you want to operate.

This getting rediculous. Keep your fag and les feelings to yourself. I came here to talk about ham radio NOT FAG topics. If you are not sure of which side your swinging from, go to another newgroup and leave US out of it. Oh, by the way, humans are the only creatures on earth that get their mind so messed up as to hump the same sex..... it's sick..... think about it!!!

take it somewhere else.

Anyone know of a way to clone or computer control the Kenwood TM-V7A ?

I think I will put one in two cars and maybe a third on the desk in my
'shack'. It would sure be nice if I did not have to reprogram all
three radios.

Please reply via email: W4SCO@amsat.org

In over 35 years I have never heard a ham say they were gay on the radio. It is a mote point. Unless you come out on the air and say what your gender preference is, how is anyone going to know? Get on the air and have some fun. Like with most of usenet rec.radio.amateur.misc and .policy does not represent ham radio.

>KF4RTY

Hello Jeremy, the hamfest next Sunday is at the Indiana State Fairgrounds corner of Fall Creek Parkway and East 38th. St., Indianapolis. I not such a great navigator, but I'd take I74 to I465 north, then I70 west to Keystone Ave. north, Keystone to 38th. St. then turn left. The Fairgrounds will be less than a mile away, you can't miss them.

That would be a horrible idea!!!! We must fight that at all opportunities. If the ARRL got that legal power they would try to remove the codeless Tech class of hams and make all hams pass a code exam!! The ARRL represents less than 1/3 of all US hams (even though I am a member). I read the minutes of the board meeting. 5 directors voted against the idea. We need to elect more members to the board to join the five. I plan to run for the Southeast director as soon as I am eligible (98 or 99 ?).

Go to ...

http://www.ualr.edu/~hamradio/callsign.html

In the "City" field, enter Chicago, then press the "Perform Search"
button. It's gonna be a BIG list! If you can divide the city by
ZIP codes, do that first, otherwise it will take a while for all of
the listing to be dumped.

Have fun!

Oops! I forgot! There's a "Maximum Records" field that needs to be
filled. Default is 100, but it's a 4-digit field.

Hi Scott, this is just a wild-March-hare idea. If you insulated the antenna from the mast, you might get away with a single near-vertical radial per band - essentially a half-wave all-band vertical antenna.

No it doesn't. SOME people take OT biblical quotes OUT OF CONTEXT of
their times and places to rationalize hating other people. Check out
The Good Book: Reading the Bible with Mind and Heart, by American
Baptist gay black minister Rev. Peter Gomes
http://www.allsaints-pas.org/homepages/all_saints/l_gomes.htm
, who's a Professor Of Xtian Morals at Harvard, for an explanation
of all that. Then quit abusing the bible to rationalize your hate.
If you want to hate, you're on your own! And don't lie about it not
being hate. If it were simply disagreeing you wouldn't be telling
your idiot child to punch out his teachers for saying it's ok.
That's a hate crime fool.

> The bible also
>states that people <gentiles and non conformers to the
>law---gods law before you open your mouth--- should be
>avoided or eliminated when avoidance not available>

More out of context rationalization. The bible also sez that slavery
is ok, and for people to murder all the people in a city. It also
says you shouldn't eat pork and shellfish or work on Saturdays. Do
you follow all those things out of the context of their times and
situations?

>lesbianism is DISGUSTING to me,

That's fine, there's no accounting for taste.

> but if we follow GOD'S
>laws, they will eventually eliminate themselves due to
>non advancement of the species and GOD'S wrath.

Right, you keep believing that, and just leave us alone. When you
cross the line and start trying to hasten that stupidity by violent
actions, expect to eat some lead from at least this NRA member.

..

Yes, in the context and times of a historical novel of myths and
legends written by skanky old men around campfires. Grow up!

The bible is a collection of primitive myths and legends and is
nothing more than a historical fantasy novel. If you want to believe
everything in it, including over 200 contradictions, lots of
things that don't make any sense, the commands to enslave people and
commit genocide against entire populations, and the kosher laws that
tell you what not to eat, I have no problem with that, but when you
carry it over into waging war against me, I have a problem with
THAT.

Lots of people don't agree with me and I don't think they're stupid
or hateful. You, I do.

> You need
>to reevaluate your sexual position,

Which one? :-) I have lots.

> as well as your
>emotional disorder that you call lesbianism.

Sorry Archie, according to psych science it's not a disorder, but
hating people irrationally is. Seek therapy.

> You need
>not reply because I am blocking all messages on this
>thread, and all messages with your address.

Goodie gumdrops for you. You think you have a right to state your
opinions but can't stand listening to those who differ. Burn your
license too, if you have enough of a brain to have gotten one.

>get a life, and see a head doctor.
>lesbianism is a disorder not a sexual orientation

In your hate sick mind.

--
Of course that's just my opinion.
Anyone who doesn't agree with me is clearly wrong. :-)

3396. Re: New kid trying to learn code with a Bencher Paddle

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-07 00:00:00 UTC
From: hypoxic.no.spam.please@rt66.com
Message-ID: <350348d2.5706236@news.Rt66.com>
Source record: 176398

Good for you, learning code that is....though I do wonder about going
to a keyer at such an early stage....but maybe having the neat toy
will help you stick with it...who knows. The bencher paddle is tops
in my book, so at least you should never need to upgrade that.

On 6 Mar 1998 20:20:40 GMT, "Dean Wooldridge" <meds@onramp.net> wrote:

> For example, we notice that we can press the paddles
>to generate dots and dashes or we can press and hold and often generate the
>sequence we need. Great case in point seems to be the letter "C"

This is known as "iambic" operation. It works well for letters such
as C, but also L,Q,Y,F etc. Any place a dot or dash falls between two
of the others. A lot of hams don't use this feature, but it really
cuts down on fatigue. "CQ" for example is just two well timed
squeezes, where it would be 7 back and forth motions, or 8 if you
tapped a paddle for each element.

Do be aware that iambic operation comes in two flavors: Curtis A or
B, (or some such I can never rember which is which anyway) The
difference is that the same action that gets you a K with one type
gets you a C with the other. You have to get off the paddles one dot
or dash sooner with one than the other. If you learn with one, and
have to use the other (when visiting a friends shack for example) it
will drive you nuts. If you never use the iambic feature, then you
won't be so impared. I am so impared in this way that I will use a
straight key rather than a "wrong mode" keyer.

I notice that the popular CMOS super keyer III has feature to switch
between the two modes...I really need to build me one of those.

Removing the antenna length restriction would certainly help. Doubling the antenna size would allow almost a 10 dB improvement in radiated power. However, it's a lot more practical for the average experimenter to increase the power from one watt to ten watts than to put up a 100-foot vertical.

> > Even if "high power" ham operations (maybe a few watts ERP) were

>
> How active and where is this primarily located?
>

There isn't a lot of information available on-line as to the locations of GWEN stations. They can't be much of a secret because the antennas are hard to hide, but I don't know where all of them are. Suffice it to say that the GWEN network is rarely silent for more than a minute or two at a time, and here in central Minnesota they blow my headphones off when they transmit (if I'm listening anywhere between 160 and 175 kHz).
>From what I've heard, the GWEN network will soon be decommissioned and some of the antennas will be used for differential GPS beacons, probably operating in the 300-kHz range.

> > foreign broadcast
>
> How active and from where is this coming?
>

The strongest one is usually Iceland on 189 kHz. Often very strong in Minnesota until a couple of hours before local sunrise. It has to be overwhelming in the northeastern part of the US. There are others, mostly European, at the standard 9-kHz spacings, and one at 187 kHz, but I seldom copy their modulation. If I open up the bandwidth even to 2 kHz

there is so much junk coming in that it takes one heck of an AM signal
to be readable.

> > and power-line carrier signals that already occupy the
> > frequency.
>
> I thought these were rapidly phasing out? Are they still very pervasive,
> or only in certain geographical regions?
>

Here again it's hard to find any data on how and where the power
companies are using low-frequency power-line carriers (PLCs). I haven't
noticed any reduction in the number of PLCs at my location over the past
several years. Like most LowFERs, I tend to refer to any unidentified
carrier as a "PLC". That's probably what they are, but there is no way
of knowing. I doubt that the electric utilities are making wide use of
PLC for control purposes. It is unusual in this area to hear a signal
that is keyed or carries any other evidence of modulation. For the most
part, they are just steady carriers, which I assume are "supervisory"
signals to verify continuity in long transmission lines. If that is
true, it is an application where PLC may remain the most effective
technique for a long time to come.

> > If the hams don't get 160-190 kHz, eventually some commercial
> > interests will. Then you can really kiss LowFER operation goodbye.
>
> Who might want it?
>

Longwave broadcasting? Not likely in the US, but who knows for sure? The
extended ground-wave coverage would make it more attractive than the
1600-1705 kHz extended AM band. Possibly differential GPS, if the
existing channels around 300 kHz get too crowded. Nature abhors a
vacuum, and that seems to be especially true in the RF spectrum.

Yeah, well if you're going to base your sense of morality on what some group of ancient Hebrews believed, you'd better go all the way. I hope, since your idea of right and wrong is based on the old testament, that you don't wear any poly-cotton blends. You don't eat shellfish, do you? How about cheeseburgers? All these things (and others still more strange) are just as clearly spelled out as being sinful. But you don't write hate-filled e-mail messages to people who don't shave their eyebrows before funerals, do you? Then why do you single out homosexuality as the ONE biblical sin that's really a sin? Because you're a hypocrite, that's why.

-Brandon Burt

(I fail to see what ANY of this has to do with amateur radio).

> finding this compression utility in LogMaster so I can import it into
> LogWindows. 73, Steve

Hate to bust balloons, but you can't get there from here. I have a
friend in the same situation and Logwindows suggested that he send the db
file to them and they would massage the data. That was several months
ago and still nothing. He really likes it. I am waiting, I've got 6000+
q's in logmaster. I am using WJ2O in the meantime. It runs really nice
but I do not like the packet interface. It doesn't import the callsign
to the log itself, just the frequency.

Good luck

3415. What would happen 'if' code and theory were dropped?

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-07 00:00:00 UTC
From: lar01@sprynet.com
Message-ID: <35019c4f.26671149@news.sprynet.com>
Source record: 176417

I know that there is a movement, afoot, to get hf cw dropped, but, I
now see there is a movement to have the theory dropped as well.

That kinda scares me.

I have read some of the messages on rec.radio.cb. cbers asking
questions that most amateurs would consider extremely basic.
What would happened if 'hams' did not have to take any tests and were
permitted access to all of our bands?

I wonder if they would consider dropping the driver's tests, etc.

I think though that most want the ham tests dropped as they can't seem
any positive benefits to the amateur exams.

When I talk to, in person, some newly licenced amateurs who are also
cbers, I can very quickly sence the difference between the two licence
classes. General attitude about the radio spectrum is one difference.
Yes, we do have some amateurs who should have their licences revolked,
but, I think this is more the extreme than the norm.

>
>

Random thoughts about your new antenna:

(1) If you mount it on a guyed tower, it will be the equivalent of mounting it on a 90-foot hill. You may not need radials.

(2) If you choose to use radials, you may get by with fewer than a zillion. Three radials probably would do the job.

(3) You could break up the top set of guy wires with an insulator 32 feet from the mast, forming radials but adding no more "wire in the air" than what you had before.

(4) Be certain to use a Transi-trap (or equivalent) inserted into the transmission line to protect that nice radio of yours. You also may wish to disconnect the antenna feed line from the radio when not in use. (The antenna and mounting arrangement you describe sounds very much like the description of a lightning rod <grin>).

(5) Good luck. If you keep the antenna, let the group know how it works out!

This is hardly an example of a goose-stepping government. We pay the Secret Service good money every year to protect the current President, living past presidents, and their families. If the action you describe REALLY took place (?), then the SS was simply complying with a mandate from the American people.

Threatening the President is the #2 way to get into hot water with loose speach. The #1 way is to make jokes about a bomb while standing at the airport metal detector. You will be hustled to a back room (by folks with guns) faster than you can say American Airlines.

"Goose-Stepping", Mike? I don't think so. There're doing what I want them to do. Just one man's opinion!*

3421. RAIN Report dor 3/6/98

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-07 00:00:00 UTC
From: arnoldr@ollie.ralabs.com
Message-ID: <350139dd.132053561@news.axess.net>
Source record: 176449

The following is posted at the request of Hap KC9RP who curently does
not have newsgroup access. Please address questions to him at the
address listed i nthe text below,

==========

The RAIN Report for the week of March 6, 1998 includes:

"The ARRL Audio News Alternative"

Rick Lindquist/N1RL talks about this new weekly service that
excerpts
the ARRL Letter; this interview was conducted by Hap Holly/KC9RP.
(12
minutes, 3 seconds).

This RAIN Report will be available through Thursday evening
telephonically at area code 847-827-RAIN, and on the worldwide web
at
www.rainreport.com, where a 28.8 or faster modem is required for
the Real
Audio 3.0-encoded streamming audio; 14.4 for the 2.0-encoded
version. Be
advised that Real Audio freeware will not permit downloading of
RAIN
audio. The Real Player Plus ($) will allow you to open a file on
your
hard drive; it wil start and stop the drive during times of
network
congestion, resulting in an audio program ready for transmission
over
Amateur Radio repeaters.

Some of you carry the RAIN Report faithfully but weren't
recognized
as part of RAIN's rotating weekly acknowledgment the past year.
Now is
your chance during RAIN's annual affiliate survey. The results
will be
included as an affiliate list in the RAIN Bull. Here's the info
RAIN
needs: the name of your repeater or simplex net carrying the RAIN
Report;
its frequency and coverage area; the day and time RAIN is carried.

T.W.I.A.R. affiliates are welcome to participate too. Phone your info
into Hap Holly/KC9RP's voice mail at area code 773-792-6778; or better
yet, E-mail him at hap@rainreport.com.

The RAIN Report is copyrighted 1998, all rights reserved. Audio
distribution of the service is licensed only to the following:
INTERNET: Bohnhoff Mediacasting (rainreport.com);
SATELITE: This Week in Amateur Radio {T.W.I.A.R} (9 PM Eastern

Saturdays on SBS 6, 13B Horizontal, 5.8 Mhz audio);
H.F.: Vern Jackson/WA0RCR 160-Meter Gateway Radio Newsletter
(Saturdays, 8 PM Central on 1860 Khz AM from Wentzville, MO); and
T.W.I.A.R. affiliates.

Unrestricted local VHF/UHF over the air dissemination of the RAIN Report
is exempt from copyright licensing.

If you run both RAIN and either Newsline or the ARRL Audio News on
your net, we suggest you run RAIN at the end after all traffic and

check-ins have been handled. Those stations needing to leave can without
fear of missing that portion of the net. However, you'll be surprised how
many will check in and stick around to hear a RAIN program that probably
no one else in your area is carrying. And remember, a regular check-in is
a prime candidate for becoming a member.

Are you tired of paying long distance phone charges, enduring

160-meter static crashes or Internet congestion to listen to RAIN
Programming? A one year subscription to all RAIN programming is available
on audiocassette for $30.00 a year; $10.00 more to keep all 12 tapes. The
best of RAIN is available 6 times a year on the RAIN Journal at $22.00,
including Hansa Plastics free matter mailer and reusable laminated

address card. Make checks for subscription or non tax deductible
donations payable to RAIN, and send to PO Box 2565, Des Plaines, IL
60017-2565.

Hello. I have a question on the TC-4002-SW base station meter made by Dosy. What is the meters freq. coverage (meaning, on what frequencies will it operate on)? I have checked several sources and gotten many different answers. Some say that it was made for use on 10/11m, some say you can use it for 160m-10m, some say Dosy does not give a freq. coverage. Any help is appreciated. Thanks a lot in advance!

> open 1750m band to no-coders.

It already is... it's a license free band now ANYONE can use it, even you Masa, of course when you get there you'll be expected to know how to copy Coherent CW and understand how to eliminate noise before it hits your front end. It will also require something other than a wire stuck into a plastic box in order to receive anything. Keep us informed on what stations you work on 1750 Masa, should make for some very short posts.

>

100 uV/m at 30 meters works out to an effective isotropic radiated power of 0.3 microwatts. Now that's really QRPp! And if you read the Part 15 rules more carefully, you'll see that the 100 uV/m figure applies to broadband emissions like swept-frequency field-disturbance sensors. If the bandwidth of the emission is less than 10 per cent of the center frequency, much tighter emission limits apply. That rules out things like AM, SSB, CW or NBFM. There is an industrial, scientific and medical (ISM) allocation at 13.553 to 13.567 MHz where the permitted field strength is 10,000 uV/m at 30 meters. This is equivalent to 3 milliwatts into an isotropic (zero dB gain) antenna, or 1.8 milliwatts into a dipole. That is the only place I'm aware of in the HF range where reasonable DX might be obtained with legal unlicensed devices under the US rules. Note: 10,000 uV/m is also permitted in the frequency range from 26.96 to 27.28 MHz, but nobody seems to worry about rules in that part of the spectrum anyway :-)

a very good idea to keep ham radio going.

that's what's happening in many countries including Japan.

no coders have access to HFs but they can't use morse.

allow everyone on HF and just ban morse code whoever doesn't hold
morse. that's all it takes.

>Jeff KH2PZ

But how much of that is still in use? I know that GA Power has discontinued all of their microwave and carrier current systems and converted to fiber optics. They pull a strand along with their high lines now. From what their engineers told me, that's becoming standard industry practice. It takes a while to get all of the older stuff out of the system, of course, but they completed the changeover 3 years ago. They still have carrier current licenses, and fixed microwave licenses, but it is now a moot point. I found out about this when I bought up all their old microwave equipment a couple of years ago. (Some nice stuff from our point of view for high speed FSK data, but just scrap to the power company.)

I'd expect that the same sort of thing is happening with other utilities based on the GA Power engineers' comments that fiber is becoming the industry standard, just as it has with the phone companies. It should only be a matter of a relatively short time until all of the RF stuff is gone nationwide.

What it gets through is the Q of the transmitting antenna. With such short
antennas, this is the major consideration. Voice transmission is very
challenging on this band because the antenna becomes a very reactive
load over the span of voice frequencies. But CW and NB digital do just fine.

>And I gather that the lowfers started applying some of the techniques used
>in moonbounce to extract signals from the noise.

Actually, the Lowfers were using these techniques *before* moonbouncers
tried them. And most EME stations still don't incorporate these techniques
because (according to postings on moonnet) they are non-traditional in that
they don't use by ear reception. The Lowfers have been real pioneers with this
technology. NASA has been virtually the only other organization making use of
these techniques, for their deep space probes, and that's a rather different
noise environment, so the techniques are slightly different.

>In the first issue of
>Communications Quarterly, there was a weak signal receiver for the lowfer
>band using very fancy techniques to attempt better DX. There was nothing
>simple about that receiver.

Actually, it is quite a simple receiver. It is a TRF design with a switched
capacitor filter operating at the carrier frequency. The package count is
relatively high because clock recovery was done in SSI, but that's easily
solved. Most of the receiver can be reduced to a couple of subsystem ICs
today. The frequencies involved are low enough that some of today's DSP
chips could be used there directly. And that opens up all sorts of signal
processing possibilities.

Hmmm *FUNNY* type of God you have. He punishes Gays and babies born to mothers with aids. He punishes some people that have had blood transfusions and acquire aids, he punishes some people in Florida for visiting a dentist that had Aids as they then acquired it. I suppose he also punishes some health care workers that accidently come in contact with aids tainted blood. He also punishes spouses that have had NO sex outside of marriage but then acquire it when their husband/wife brings it home from an outside affair ..... Yesteryear that *God* you have is one punishing dewy ....

hmmm I thought that is where lesbians were created.

they say that it is all in the jeans, lesbians prefer to act
as guys therefore not wearing dresses it would be all in
jeans.

on anther unrelated topic, isnt this a ham newsgroup
what does this have to do with ham radio?
faggots and lesbians can do thier own thing, in the privacy
of thier own homes. When they tell me or my kid that it is ok
to be that way, I prefer to get physical! My stepson punched
a teacher for that, got expelled, and then reinstated because
our local school system is not so liberal. I told them that is the
way that I told him to behave and he was acting under my
orders. BTW the teacher lost HIS job.

You miss the whole point Archie. Bigots are people who hate other
people without knowing them. As in "prejudice"? Pre-judging?

Looking for a good dual band mobile that someone might be willing to trade for some misc. items (older 10yr computer w/vgamonitor, RS digital sound level meter, RS Pro-2030 scanner, RS DX-302 Communications Rec. 3-30mhz, etc). If you have a d.b. mobile in good shape (8 or better) and interested in trading, let me know. Brand doesn't matter as long as its fairly newer (less than 5yrs old) and in reasonable shape.

That's bending the rules a tiny bit. You're allowed one watt
input into the final stage of the transmitter, not one watt
output. And, antenna + feedline + ground lead must not exceed
15 meters (~49 feet). One method which overcomes having to in-
clude the feedline length in the above inequality, is to place
the xmtr itself at the base of the antenna, thus avoiding a
feedline completely.

>
>>> Hating people for who they love is disgusting to me.

hating yes, disagreeing NO. The bible does say that
lesbianism and faggotism is WRONG. The bible also
states that people <gentiles and non conformers to the
law---gods law before you open your mouth--- should be
avoided or eliminated when avoidance not available>

lesbianism is DISGUSTING to me, but if we follow GOD'S
laws, they will eventually eliminate themselves due to
non advancement of the species and GOD'S wrath.

>> What about hating people because they disagree
>>with _your_opinion_? You're the pot calling the kettle
>>black.

opinions are like buttholes, most people have them, and they
all stink

>>> There's no such thing as "normal". "Normal" is just an
>>> area on a statistical curve, each individual point of which is
>>> unique. Anyone who thinks they're "normal" is a fool.

normal in the aspect of lesbianism and faggotism was clearly spelled
out in the bible

Well, Matt, I once built a radio that ran off a lemon, and another that ran off a potato (though not very well). I hadn't considered running one from a jelly donut. Perhaps we need an intermediate stage, say a jelly donut eating operator on an exercise bike hooked to a generator.

3475. FS: Two RCA 45 Used Tubes

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-07 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6dqmha$22v$4@csu-b.csuohio.edu>
Source record: 176532

Two RCA #45 used tubes for sale with my actual TV-7D/U's
readings/ratings for each tube.

Tube dealers due to large volumes of tubes generally cannot spend
the time to give you the actual "performance" of the tube on a
calibrated TV-7D/U tester in excellent shape (Please understand
your readings can vary obviously). They simply say the tube
passes usually and you could get a mediocre pass at best to
decent very strong tube with the luck of the draw that's really
like a new tube. I have had this experience.

Have rated and priced the following two tubes accordingly:

Tube 1: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 78

Asking price $45.00 or B/O plus shipping. This tests
approximately like a new tube in my opinion!!!

Tube 2: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 65

Asking price $35.00 or B/O plus shipping. This is a strong used
tube in my opinion.

International buyer welcome.

Thank you.

Why do you call yourself gay? Gay means happy. You seem to be pretty
miserable.

You mean those queers are so closed minded that they won't explore the possibilitythat it might not be so bad, what a bunch of bigots.

> Since
> homosexuality is so common among other species as well as our own,
> it's very hard to claim that it's not normal,

If you want to act like a monkey go ahead, just don't try to tell me thatit is normal behavior.

> so to simply claim your
> prejudices define what's "despicable" is to set yourself up as the

I did not ask that question of a queer, and I have yet to get an answer froma
normal parent how they would feel about little Johnnie spending the night
in a pup tent with little Little Billie Homo.Look who's talking about getting a
life. You go around acting like a monkey.

> >You have Child, that seems strange from what you say. How would/does he
> >feel having two Daddies?
>
> The studies that have been done of children who *do* have two daddies,

You must not know what the word bigot means, you seem to think your way is right
and not willing to look at the possibility that it might not be. That makes you a
bigot.Just who did those studies, Dr. Queer a sa 3 dollar bill.

> So as far as I'm concerned, I'd rather have a child brought up by two
> intelligent, enlightened daddies than by a heterosexual bigot any day.

Is there something about being queer that automatically makes someone
intelligent, you seem to think so. I don't see how someone who emulates
a monkey can be so damn smart.

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #258 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 13-Mar:
-
1. Mir-School Contact with Wyoming School Delayed
2. FCC Commits Vanity Call Sign Blunder, Ham Petitions for Fix
3. Ham Radio in NY Times Story, Another Article Set for Sunday
4. Rob Hill, WX3ROB, New Mt Holly, NJ NWSFO SKYWARN Tech Chair
5. APRS QSY Taking Hold in Florida, Arkansas, and New England
6. Special Event Station Calendar
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. Weekly Propagation Forecast
9. "The RAIN Report" from Chicago
10. "Tower Climbing Safety" with Greg Stoddard, KF9MP
11. Updated Information on TWIAR's W2T Special Event Station
12. A Panel Discussion on TWIAR's First Five Years on the Air
-
Note: This week's edition celebrates the fifth anniversary of
the service. All local segments will be carried LIVE during
Saturday's satellite uplink.
-
Transmission and production expenses have been underwritten this
week by a grant from users of the N8DXB "Swat Team" repeater on
145.17 MHz in Kalamazoo, Michigan, serving Kalamazoo, Portage,
and Battle Creek, where "This Week in Amateur Radio" is heard
Thursdays at 8:00 PM. Uplink costs paid to the W0KIE Satellite
Network have been underwritten by a grant from Jack Halem,
KA6DLX, and the Deluxe Repeater System of Corona, California.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The
program is heard on the "W0KIE Satellite Network" each Saturday
at 9:00 PM (EST) on the Hughes Communications SBS-6 commercial
communications satellite, transponder 13B upper, located at 74
degrees west longitude in equatorial geosynchronous orbit. The
transponder center frequency is 12.019 GHz; tune up to 12.031
GHz. Program audio is on the 6.2 MHz analog subcarrier.
```

-
On the WorldWide Web, program audio can now be found in several formats (including streaming audio) at http://www.roava.net/twiar through the courtesy of the Blue Ridge Video and Digital Society of Roanoke, VA; at http://user.icx.net/~ke4hsm/twiar.html with thanks to Greg Williams, KE4HSM, of Knoxville, TN; and at http://www.ionet.net/~michaelr provided by Mike Reynolds, W0KIE. The service is carried on VHF/UHF repeaters throughout North America and by WA0RCR on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, W2XBS, at 518.283.3665 (packet @ WA2UMX.FN32AW.NY.USA.NA or email kxkvi@delphi.com) or Stephan Anderman, K2SMA, at 518.664.6809 (packet @ N2TY.FN32DW.NY.USA.NA or email sanderman@delphi.com).

(W2T was operated by K2SMA for this posting.)

>there's common ground. Part 97 doesn't seem to allow for hams communicating
>with Part 15 users.

Hi Dana,
It seems as if we have been sharing spectrum with Part 15 users
for a long time. A 1960s ham projects book describes an 80m QRPp
transmitter for Part 15 users. With all the talk about 1750m lately
I spent some time today on the Government Docs floor of the library
perusing Title 47 Part 15 Subpart C: Intentional Radiators. Under
Under S15.223, the freqs from 1.705 to 10 MHz is a Part 15 band.
Field strength must not exceed 100 uV/m at 30m distance. Admittedly,
that's not much to work with...

I'm through with you and this whole topic. It's obvious you don't give a damn about amateur radio, or anything else except your radical anti-gay agenda. I will not be party to this off-topic discussion any longer. I'm just as guilty as you for perpetuating this thread, but this is the last time I will post to it. If you care to continue your senseless, bigoted attack, you can take it to alt.christnet.hypocrisy -- the newsgroup devoted to such discussions. It's obvious you are incapable of maintaining a civil discourse, however, so I doubt you'll be welcome there. Do not flood my mailbox with messages, and I'm sure my ISP will appreciate it if you refrain from inundating them with groundless complaints.

A lot of the proposed sites are listed in the book "Nuclear Battlefields,
Global Links in the Arms Race" by Arkin and Fieldhouse. Some of the
listed sites may not have ever been built, as they tended to have a very
high NIMBY factor with their neighbors.

There's a map on page 32 of the book that shows 7 or 8 relay nodes in
the Dakotas, around the missile fields, no wonder they're loud there.

Robert -- I think the answer to your question can be found at URL:
http://users.lanminds.com/~anb/ham/ukrecip.html
Here's a snip (but best u visit the page ur self)
"The form you will need to fill out in order for a licensed US amateur
to get a
reciprocal license is called RA 189 Application for a Temporary Licence
for
non-UK Residents (Rev. 4, May 1994). At some point in the future, this
form
will be available off the web, but the best way to get it is to either
fax or e-mail (library.ra@gtnet.gov.uk)
the RA (Tel. 011+44 171/211-0211, Fax 011+44 171/928-4309) or the RSGB
with a written request to have the RA 189 form faxed or mailed back to
you." End quote

Enjoy the trip

Not only are you abusive you cant seem to comprehend what you read either.
The question was "Aren't you just a little ashamed" not whether or not
your a queer. I bet your mother and father are sooooo proud of you Jim.

By the way Mr. Ex-Con, she didn't start any "rabid Lesbian Avenger" anything,
she responded to a post and in her sig had a web site address, of course
after Burt Fisher read it he had to return and post it all over the NG as if
any of us cared. Of course none of this means much to you Jim. You just need
a troll to latch on to so you can keep yourself busy.

Tell us more about the time you spent in prison on a drug charge, now that
would make for an interesting post.

Tim, ka8ddz

Hi, can anyone help with the modification of a HTX-204. It is currently North American specification but is required for use in the U.K. Does anyone know of a modification to change the 440MHz - 450MHz to 430MHz - 440MHz? Or is there a modification for wideband transmit? The radio came without a manual so any information will be gratefully received.
Regards, Adrian, G1KEA

>what your sexual orientation is

You probably could have, but instead you were lucky enough to be given this opportunity to learn something about a person who is different from the people you ordinarily interact with. That's the reason a lot of people enjoy amateur radio. What I fail to understand is why, when this small tidbit of information about Melissa is learned (that her spouse is female), so many people decide to take it as a personal attack on their own value systems. Melissa didn't say "You need to be a lesbian, or you're bad". You should really be angry at the jerks who won't mind their own business and think everybody needs to be just like them -- they're the real threat to society. If you doubt it, look at what happened in Germany in the '30s.

Everybody needs to just relax, and chill out a little -- Melissa's not going to destroy the world, or amateur radio. If you guys would just give her half a chance, you'd probably discover you had more in common with her than not. Instead, you're letting this one little thing come between you and an opportunity to expand your world a little bit. Well, more's the pity.

This is lots of time. The ARRL should be able to point
you at the right people. I found the turnaround time on this
to be very short - less than two weeks between sending the
paperwork to SSL and getting my reciprocal licence back.

Make sure your paperwork is in order and it will be painless.

3512. Contacts galore on HF this weekend, how'd you do?

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-08 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <6dvecb$a94$1@w3eax.umd.edu>
Source record: 176314

Isn't it amazing how peoples' apprehension about their own existence can turn ANY newsgroup into a discussion of sexuality and bashing of others? There must be a LOT of people living very, very uncomfortable lives out there.

Unfortunately, while amateur radio is generally a more civilized arena than "general life," the elements that would often surface in real life seem to seep up from the slimy depths in which they live to pollute even the most potentially useful of newsgroups, turning it into a cesspool in which they can actually survive.

In an effort to stem this tide of idiocy, banality, and hate mongering, I have started actually posting what I believe to be intelligent posts. Wow! Imagine that?

So how'd YOU do during ARRL DX SSB this weekend? I operated from the U of Maryland station - W3EAX - for 3.5 hours on Saturday and did 150 contacts in 48 countries (49 if you consider the US) with 75 watts and a 6 element tribander up 100 feet. It was a blast, and the club picked up several new countries and hopefully a mess of QSL cards will be filing in.

No. Michael, I have seen nothing of the above. Sounds scary -- getting ham radio into Federal Court for any reason is taking a mighty big chance. No matter who wins, we all will lose. I would rather take a chance that I can persuade you to "my side" (I know, fat chance <grin>) than on what the courts might do. They have been known to meddle in areas not under contention if it suits them.

If you find such a posting, let me know!

No faggot,The thread was named before I posted. Actually I admire Elton and his music. Other that marching in the AIDS parade here in town he does not constantly crow about his sexuality. It is widely known and he does not make it an issue,unlike you and your butch friend. Now learn how to trace a thread,get a sex change and a personality and come on back.

Damn Tim I did not know you were gay,I'm sorry.I guess fags like
yourself fanasize about prison alot. I have'nt been there,maybe you and
your little Buddy Brandon can discuss it over e-mail. Let's stick to
radios,you came out,I'm proud of you,now let's get on with it.

Hello Scott and Larry,seemed like the QRM was at a maximum,especially on twenty. Made about 100 qso's just looking for new ones. Lots of Russians on 15,Africans on 20.40 seemed to be good at night before the big guns showed up. Lots of Croats and Slovenians on all bands. KH7 was my only new one. Lots of stations signing 100 or 300 that sounded more like 3000! I'm sure a lot had massive antenna systems but some were running way over claimed level. Nice to see a good thread; but I must give back to my public! 73 Adolph

Just wanted to let you know that the skip was pushing Seattles' Capitol Hill repeater over here to Mililani, Hawai'i. I used to live on Vashon, Is. and would monitor the local Hams with my scanner. I had left my scanner on the other night (here in Hawai'i) when I went to sleep. In my dream I thought I was back in the Puget Sound area. Thankfully, I woke up here in Hawai'i.

For me it's worth it for the lower 25khz of 40Meters. It's convenient
not having to worry about the damn band edges. Just know
where the CW/Phone line is and operate. No hassle.

KE6I

Btw, imo, I think that 80Meters General and up should get
the entire band.

ANSWER: So men will be totally embarrassed during physical examinations. This
is part of natural selection. It keeps the males from getting health check-up's
and they die sooner than the females of the species. Then the females can
spend the insurance money on clothes.

(By the way, I owe the newsgroup members an apology for complaining about the
Code/NoCode discussion. Look what took its place!) <grin>

>What happened to free speach?

Do you want the old example of shouting "Fire!" in a crowded theater?

>If that was true, Al N2SAG would have been in jail long time ago.

I can't answer that......maybe his day is coming!

A man was stopped for speeding near Bayport, Texas. While the patrolman was writing the ticket, other cars went whizzing by at high speed. As they did, the motorist asked the cop, "What about THAT son-of-a-bitch?" "And what about THAT son-of-a-bitch?" "How about THAT son-of-a-bitch?"

The patrolman finally answered, "Take it easy, Mr. Robbinson. One son-of-a-bitch at a time....."*

Yrac
*True story. I was there. Robbinson was the car pool driver that day, and the rest of us in the car were having a good time at this expense!

Try resoldering the connections on that final transistor! If you run
the radio on 12v in the high power position, it eventually will begin
to melt the solder there... and due to partial melting/hardening you
end up with cold/bad solder joints.

The mechanical stress of taking it apart and putting it back together
often fixes this temporarily, but not for long.

I've repaired a number of 202's with this problem.

Paul

Do I have to serve any "Penalty Time?" (This was a concept imposed by my second-grade teacher. If someone disrupted the class...usually me...their name would be put in the "penalty box" and they'd have to spend 10 minutes after school in exchange for every minute of class time that they wasted.)

Well, at least we agree on something. I won't join them, either, but for the
exact opposite reasons. The less government message is a great one, but they
lose me when they start with their nonsense about legalization of drugs,
prostitution, acceptance of homosexuality, etc. This is why they will never
win elections; their voter base is too narrow.

I live in New Hampshire and hear some AM modulation in the LowFER band but cannot make out any of the words. At first I thought these were harmonics from a nearby AM broadcast station on 1370kHz. Their trasmitting site is perhaps 1 mile away.

The signal at 189kHz isn't overwelming here but some other signals can be at times. I can hear some of the other European broadcast stations such as the one at 187kHz because its in either Portugese or Spanish. I can most definately hear GWEN signals. They can be overwelming at times, however there is a GWEN site located only 200+ miles away in the Hudson Valley region of New York.

I'm using an Alinco DX-70T which I modified to extend recieve coverage down to 30kHz so the receiver is not that sensitive below 500kHz and a quarter wave sloper with extensive ground radial system for 160m.

I haven't heard any LowFER beacons yet with this rig. I generally listen from after sunset to 23:30 eastern time.

A bit further up the band, I can copy many of the NDB's in Eastern Canada, Southern Quebec and Northeastern U.S.

Another benefit of being an Extra class ham in the U.S. is that if you go for your Second or Third class Radiotelegraph Operator's Certificate as part of the Commercial Radio Operator License program, the FCC will grant credit for telegraph examination elements 1 and 2 for those applicants who hold an unexpired Extra Class ham ticket.

I have a Kenwood TS-820S with EXTREMELY low
output in the TUN mode. Everything else is working at
specs. I get full out put in CW and SSB.

How do I adjust the TUN mode?

Where is the adjustment?

I can't find a service manual, it is out of print and Kenwood
apparently either doesn't have one, or is not willing to copy
the one thay have as they used to offer.

I need to use this TUN mode to initially tune my amplifier
so that I don't blow something up or scortch it.

So your a liberetarian, huh Mulisa,

Then how come when someone posts something about your perverted lifestyle
you jump up and down and throw one of your little fits and call them,
in your own futile way, names? Does the liberty to think what one wants
apply only to you? You sound like one of those Liberty Nits on 3950.

Geeze, talk about the "pot and kettle syndrome". Coming from Spew, this is
almost laughable.

MD

PS: And, for what its worth, she is basically correct. The Bible *IS* just
a collection of fairy tales, modified over the years (you know how the
"King James" version came about, don't you?) as the "Church" saw fit. The
"Church" is basically a large multinational corporation, in the business
of selling fear, uncertainty, and death (FUD). I once wrote a thesis paper
on it -- I called it 'Satanic Economics'.

No, Larry, it is unfair to those with enough brains and common sense
to recognize how antiquated and irrelevant Morse is in today's world.

It is you pro-coders who insist on maintaining mandatory Morse testing
who are the socialist/welfare state types ... intent on state-mandated
"life support" for your favorite mode, regardeless of the cost to the
remainder of hamdom.

> I never got a full "taste" of anything, and I upgraded

Melissa:

Are all lesbians as charming as you are, or are you an exception?
If you don't like us, why do you continue to respond to the few in
here that annoy you, and simply stick to the subject? Why did you
even bring your sexuality into the discussion in the first place? We
could have enjoyed debating with you for years without knowing
what your sexual orientation is! Frankly, my dear, I don't give a
damn if you make love with Zebras wearing yellow polka dot socks!
(And if you do, I don't need to know about it!)

The plain fact is, you made yourself open to a discussion of your
sexuality, and quite frankly, all it does is add to the noise level in
an already noisy newsgripe. So give it up, and, if you'll pardon
the expression, just be "one of the guys" if you want to post here.

>Of course that's just my opinion.

That includes losing your stupid disclaimer. People who post such
disclaimers are simply asking for the kind of messages they seem to
be seeking to avoid. Just don't do it, and nobody'll bother you.

hello,

i have a alinco dr600 and i don't need to extend the tx/rx mod
because it was already extended when i bought it. :)

After I closed it all was well except it was in the U.S. mod.
(144-148,440-450)
What I need to know is how to put it back in to the european mod
(144-146,430-440)

please help me

thanks in advance

Mario

there.

The signal OPT SEL (J03 pin 1) needs to be pulled low to enable the
out-of-range freqs. Try looking at
http://www.geocites.com/CapeCanaveral/8516/expand.htm where I found the mod.

I'm a shining exception. Some of them are more polite than me and
would rather just silently hunt you down and kill you. I prefer the
verbal duel approach.

>If you don't like us, why do you continue to respond to the few in
>here that annoy you, and simply stick to the subject?

I'd be glad to, but I believe in respinding to attacks. If you and
your buddies quit attacking, I'll quit defending.

> Why did you
>even bring your sexuality into the discussion in the first place?

I didn't, stupid, it was your good buddy (you do know what a good
buddy is) Burt, remember? Burt the anti-ham whining troll, who has
since ducked back under his bridge?

> We
>could have enjoyed debating with you for years without knowing

in
>an already noisy newsgripe.

"Newsgripe" is a very appropriate term for this group. No wonder
people think ham radio is mostly populated by cranky farty old men.

> So give it up, and, if you'll pardon
>the expression, just be "one of the guys" if you want to post here.

Cute.

>That includes losing your stupid disclaimer. People who post such
>disclaimers are simply asking for the kind of messages they seem to
>be seeking to avoid. Just don't do it, and nobody'll bother you.

Actually it gives me a little authority to complain to the abusive
emailer's ISP if they do. If people don't like what I say in this
public forum, they're free to respond in the same, just don't step
on my blue suede shoes, call me "too late for dinner and you don't
get any", or email me abuse in my private mail box. It's only for
friendlies.

Hey there...

I have a Technophone 900 (clone of a Nokia) Transportible Cellular Phone for sale (or trade). Condition is about 5/10, but it works 100%!! Will work on the Analog (standart 800 MHz) system (both A and B carriers). Includes the Transceiver Unit, the Handset (with the cord), the 12 VDC plug (for connecting a ciggarrete ligher cord), original manual (in both Engligh and Spanish), two antennas, one is the "Rubber Duck" type which connects directly to the TNC connecter on the transciever unit, and a "Trunk Mount" mobile antenna, also with the cord and TNC connecter. Plus I also have some "Programming Info" for it. One more thing, the handset of the unit is damaged abit (there's a scratch going through the LCD) but the LCD functions perfictly. (Basicly only the handset is in rough shape, all else is in great shape.) Asking $30 + shipping. I am in the Philadelphia, PA area.

There isn't a "tune mode" adjustment. When in tune mode the screen
voltage on the finals is halved by a voltage divider in the power
supply. What has happened is the divider is open. I am at home and don't
have the designators but look at the schematic for 2 56k resisstors in
the power supply board. If you can't find them then e-mail me tomorrow
and I will look them up.

There are plans in the the HB for a tranceiver, if you do a web search for
'lowfer' you'll find lots of converters and the like.
The hardest trick down there is cancelling the noise.

Tim

SB DX @ WW $OPDX.347
Ohio/Penn DX Bulletin No. 347

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 347
BID: $OPDX.347
March 9, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2WE, WB2RAJ/WB2YQH & The 59(9) DXReport, W3UR & The Daily DX, N4AA & QRZ DX, AI5P, N6ED, K7BV, EA5XX, EA2CLU, EI6FR, EI2GX, F5NOD, G3RTE, G3SWH, G3XTT, G4BUE & DX News Sheet, G4LVQ, IT9JPK, JARL, and YS1RRD following DX information.

3W, VIETNAM (plus an XU operation). Steve, K2WE, called the OPDX/BARF80 answering machine (number is listed below) and informed us that he and Les, W2LK, will be active this month as 3W6WE and 3W6LK, respectively. They will leave New York on March 20th and expect to be in Vietnam on the 22nd. Their callsigns will only be good for 6 days between March 25-31st. Before and after these days, they have access to use and operate from the Kasati Ham Club station 3W6KA. This station is equipped with kilo watt amp and a tri-band beam mounted on a 75 ft. tower. The station also has antennas for 40/80 meters. Also, they will be operating from the club station during the CQ WPX SSB Contest (March 28-29th). Steve mentioned that their license is good to operate for 24 hours a day on 80-10 meters. Also, their license has already been show to the League and has been approved. Steve stated that 3W6WE will probably be used on SSB and 3W6LK on CW. QSL 3W6WE via K2WE and 3W6LK via W2LK. QSL for the 3W6KA club station go to: Kasati Ham Radio Club, P.O. Box 76, Saigon, Vietnam. SPECIAL ADDED NOTE: Steve and Les will be the first Americans licensed to operate in Vietnam. This operation will be something special to Steve, who told OPDX that he is a Vietnam Vet and spent 2 1/2 years there (he states, "Almost 30 years to the date!"). Also, Steve mentions he may be going to XU-land with Hiroo, JA2EZB, who has helped in obtaining the licenses. Details should be forthcoming.

4H, PHILIPPINES. Robin, DU9RG, reports he will be active in the CQ WPX Contest as 4H9RG.

9M0C DXPEDITION WRAPUP. An excerpt from a press release by Don Field, G3XTT, reports that "the 9M0C operation closed down on Tuesday, February 24th, after making well over 65k QSOs with over 180 DXCC countries."

The DXpedition was highly successful in every respect with all goals being achieved. Don states full write-ups will appear in a number of the key magazines including CQ Ham Radio (Japan), Radio Communication (UK), Funk (Germany), etc. Also, 9M0C presentations are scheduled for Visalia, Dayton, Friedrichshafen, the RSGB HF Convention, the Clipperton DX Club Convention, VERON (Netherlands) and elsewhere. The full press release containing more details such as band QSOs break downs will be sent to all OPDX InterNet Subscribers.

AADX CONTEST, 1997 RESULTS. The Japan Amateur Radio League, Inc. (JARL) announced that the results of the 38th (1997) All Asian DX Contest have been uploaded to their Web site: http://www.jarl.or.jp/English/4_Library/A-4-3_Contests/1997/97index.htm They want to remind everyone the dates of the 1998 AADX Contest will be June 20-21st (CW) and September 5-6th (Phone). The rules for the contest will be same as last year except the dates.

ES80, ESTONIA. Currently there are several stations active using the special prefix ES80 in celebration of the 80th Anniversary of the Estonian Republic. Look for ES80R (QSL via ES7RE), ES80Q (via ES5MQ), ES80J (via ES1AX), ES80L (via ES6PL) and ES80M (via ES1QD). Length of their activity is unknown.

F, ILE DE SEIN (France). Jim, G3RTE, and Phil, G3SWH, will be active from the French island (IOTA EU-068) Friday, March 27th, until Monday, March 30th. They will be active on all bands 80-10 meters. Jim will use SSB on the usual IOTA frequencies as F/G3RTE/P and Phil will use CW as F/G3SWH/P. Special QSLs will be available for both calls from G3SWH (21 Dickensons Grove, Congresbury, Bristol, BS49 5HQ, U.K.) or via the RSGB bureau.

FH, MAYOTTE. The "DX News Sheet" reports that Conny, DL1DA, is expected to be active as FH/DL1DA, on CW and details on his stay are not known.

FK, NEW CALEDONIA. The "DX News Sheet" reports Philippe, F5PFO (ex-J28FO), will be active for the next three years beginning at the end of March. His callsign is not yet known.

FT5Z, AMSTERDAM & ST. PAUL ISLANDS. The Lyon DX Gang announces the next FT5Z DXpedition will take place in December, 1998. They have reportedly received all the authorizations for their one month operation. The callsign FT5ZH was issued to the team. Their main goal is to go there and ONLY operate. Activity will be 160-10 meters with operations on CW, SSB and RTTY. They will have amplifiers and beam antennas. The group is looking for sponsors and donations. Donations can be sent to their club Treasurer F5PXT (via postal order or registered mail): Mr. Eric Blanchard, 2 Rue Bichat, Bat 32, 69002 Lyon, France. For update-to-date information, check out the WEB site: http://perso.easynet.fr/~f5nod/ft5z.html

GM, BUTE ISLAND (Scotland). The Otley Amateur Radio Club will mount a DXpedition to this Scottish island (IOTA EU-123) for this year's IOTA Contest (July 25-26th). Their entry will be Multi/Single, and a special

call sign has been applied for. Operators will be G0SNV, G0NIG, G0WNT, M0ARK, M0AMA, G8HDN and G7RDJ.

IOTA 98. The IOTA Convention this year will be held May 1-3rd, at Las Palmas, Canary Islands. This is an unique opportunity to attend one of the most important conventions in Europe. For more information, check out the WEB site http://www.ure.es or send an e-mail to ure@ure.es.

J8 DXPEDITION UPDATE. Jose, EA2CLU, reports to OPDX that their expedition to St. Vincent and the Grenadines as J80R, which is set for March 21st through April 1st, has now a WEB site available. You can see up-to-date info, like callsigns/QSLs/frequencies, etc.. at: http://www.ctv.es/USERS/ea2clu/home.htm

OPERATIONS COMING TO AN END (Wow! What month for DX!). By the time you read this, the German group (ZL7DK) active from Chatham Island will be going QRT. Next to follow will be the Dateline DX Association group signing homecall/KH9 which will go QRT on March 11th. Also ending will be the SSIDXG and MKDXF group's KH1 operation which is scheduled to end on March 12th. All three operations have provided the DX ham community with excellent operations and excitement over the last few weeks.

PACIFIC DXPEDITIONS CONTINUE BY THE OKDX GROUP. The OKDX group should now be active from Tonga. Look for A35TN and A35KT to be active until March 14th. From Tonga, they go onto Western Samoa as 5W0SZ and 5W0VV from March 14-23rd. Activity will end in Fiji with a possibility of a Rotuma operation (if transportation can be arranged).

PACIFIC/ASIA DXPEDITION CONTINUES. Michael, DF8AN, continues on his long leg of DXpeditions. He will be in three different countries this week. Michael currently is in DU land signing DU1/DF8AN until March 11th. He will then spend a few days in Guam (March 11-14th) as KH1/DF8AN. Michael will then travel to Micronesia (V6) and be there from March 14-22th. His last stop will be to activate Koror Island (T8, Belau) between March 22-28th. Currently, no callsigns have been assigned for his V6 and T8 operations. His activity and operations should be mainly CW on all bands (including the WARC bands). QSL via bureau or direct (to his new address): Michael Noertmann, Neustadt 18, D-37154 Northeim, Germany.

QSL INFO AND NEWS.....
Hrane, YT1AD, and Dragan, Z32AU, were active from El Salvador during the ARRL SSB contest using the callsigns: HU1X - Hrane from San Salvador; HU4X - Dragan from beach house. QSL HU1X via YT1AD and HU4X via Z32AU.

Gianni, IT9PKO, was active as II9ZZ during last weekend's contest as a Single Op/Multi Band entry. QSL via IT9PKO: Mario Bartuccio, IT9JPK, P.O. BOX 7, 94100 Enna Centro, ITALY

QSL MANAGER W3HNK. Well known QSL Manager Joe Arcure, W3HNK, is reported to be in the hospital recovering from a heart by-pass operation. Many have received QSL cards from Joe, and we are sure that he would appreciate any get well cards/comments from the ham community. The

address is: Joe Arcure, W3HNK, PO Box 73, Edgemont, PA 19028

ON-LINE DXPEDITION LOG SEARCH WEB SITE AVAILABLE:
http://www.geocities.com/SouthBeach/Palms/8651/

5R8EE/FR5EL QSLS. There are certain rules to follow for QSLing 5R8EE and FR5EL. Michel, FR5EL, asks you to ONLY QSL direct and send NO bureau cards (Bureau Cards will not be answered). He also asks you to send your QSLs ONLY to FR5EL home call on Reunion Island and NOT to the address in Madagascar (because there is a lot of stealing of envelopes.....). Expect to receive your cards 3 to 6 months later. An indivdual reportedly comes over to Madagascar EVERY 3 MONTHS (from Reunion Island), and delivers Michel's QSLs from his P.O. Box on Reunion. Michel (5R8EE/FR5EL) then answers them at Madagascar, but it is unsure where he sends them from, so please be patient. Remember QSLs only go to: Michel Hoarau, P.O.Box 87, F-97832 Tampon, Reunion Island, France.

VP5, TURKS & CAICOS ISLANDS. Don, KN4UG, will be active in the coming weeks (March 16-24th) from Providenciales. His callsign has not been reported yet. QSL via homecall.

YB AMATEURS OFF THE AIR! Dennis, K7BV, received a message from an Indonesian friend stating that Indonesian amateurs are under a "radio silence" order covering the period of February 23rd through March 14th. Reportedly, this is taking place during the Indonesian Parlement board meeting in Jakarta, apparently for their president's 5th year in office.

ZL9, CAMPBELL ISLAND (Update for the January, 1999 DXpedition). The Kermadec DX Association, which had a very successful DXpedition to Raoul Island, Kermadecs under the callsign ZL8RI, is pleased to announce that plans are now at an advanced stage for the January, 1999 DXpedition to Campbell Island ZL9. The neccessary permissions have been obtained, transport arranged and the logistics needed to put together an operation from this remote island are well in hand. An international team of operators has been selected from New Zealand, Japan, Canada, The United States and Ireland. The operation should begin activity on January 9th, 1999, and remain on the air until January 25th. The team will operate on SSB/CW/RTTY and on all bands. The team leader Ken Holdum, ZL2HU, has previously written to major DX clubs worldwide seeking their financial support for this DXpedition which is costing in the region of $65,000 (U.S.) to mount. If you would like to contribute to the success of the ZL9 DXpedition by helping to meet the enormous costs, send donations:
Ken Holdum ZL2HU (Team Leader) Declan Craig EI6FR (Team Member)
The Kermadec DX Association The Kermadec DX Association (Europe)
P O Box 56099 167 St. James's Road
Tawa, Wellington - or - Greenhills, Dublin 12
New Zealand Ireland

All donations will be acknowledged on receipt, and in the event of the DXpedition not proceeding, will be returned.

ZS26, BIRD ISLAND (South Africa). Several bulletins report that a new IOTA will be activated this week. Activity will be from March 9-13th. Operators ZS1B, ZS1FJ, ZS1KC and ZS1LL will sign ZS26BI on all bands both CW/SSB. Watch the IOTA frequencies. QSL via ZS1FJ.

1998 INTERNATIONAL DX CONVENTION. Between May 1-3rd the convention will be held at the Holiday Inn, Visalia, CA, [telephone: (209) 268-1000]. Further information can be obtained from Rick, W6SR, co-chairperson at 714-993-0713 (home), 310-616-3912 (work) or via the E-mail address at: scdxc@primenet.com.

If anyone wants access to HF bands do the code, its sounds like
everyone wants to take the easy road without putting out the hrd work.
We make it to easy and it will end up one big cb band. :)

>Jeff KH2PZ / KH6

Nearly everyone does locate the transmitter (or at least its
output stage) at the feedpoint. And nearly everyone uses a
ground mounted vertical, so the ground lead length is nearly
nil (though the radial mat certainly isn't, at 100x100 mat is
desirable to get ground resistance down under 1 ohm). Switch
mode PAs can easily exceed 90% efficiency, so nearly a full
watt of output is possible too. Coupling it into the extremely
high Q low radiation resistance antenna is where the challenge
comes into the picture. (The antenna is often used as the final
tank circuit.) Getting a radiation efficiency from the antenna
exceeding 0.1% is quite a challenge. A station would have to
be very well engineered to get more than1 mW of radiated power.
Most are probably radiating only a few tens of microwatts. This
is *real* QRP operating.

Right sounds like a winner. Give them HF privledges without voice just CW and if they upgrade they get voice. Sounds like the most logical thing to do to me.

You think that because someone doesn't have blind faith in the
unprovable, they're a fruit loop? Pot? Kettle? Black? And as far as
the left side, I already said I'm a moderate centrist independent
libertarian, so if center seems left to you, you must be to the
right of Adolph Hitler. You're right...extreme right.

SUBJECT: Questions about sexuality.
DATE: Sat, 07 Mar 1998 01:45:20 -0500

> >
> >"Gay" sex which you so vehemently promote and endorse is neither
> natural
> >nor accpetable to God.

Questions:

Was the human body designed and created by God? If so, then why can a man have an orgasm by having his prostate gland rubbed? Also, why is a man's prostate gland most accessible through his anus?

If sex is solely for the purpose of procreation, why does a woman have a clitoris? A woman has a Grafenburg spot in her vagina, which can be stimulated by intercourse to bring about an orgasm. So why does she have a clitoris as well, which is difficult to stimulate through intercourse but easily stimulated manually or orally?

It looks to me like there are numerous ways a man and woman can be brought to orgasm involving penile or digital penetration as well as techniques involving no penetration.

The floor is open.

- Me (or maybe that other guy who thinks he's me)

It is called thermal runaway. As a bipolar transistor gets hotter, the current
through it will increase, causing it to get hotter, which causes the current
to increase, and so on and so on until something lets go. Often what lets
go is the aluminum metalization on the silicon die. But other times it is a
bond wire that fails, or even the solder joints to the leads. The latter is
rare in my experience since it is further from the source of heat than the
metalization or the bond wires.

>Mark
>WA0DCA

It never did to begin with. I loaded this group today to find over half of the messages on just one thread on a topic not having the least damn thing to do with ham radio. It turned from ham to a rights debate the second someone replied to the original thread. Personally I couldn't give a crap if the person on the other end of the radio is gay, as it has nothing to do with me. What I *am* interested in is expanding my mind and world by engaging in conversation with others, whether it be 5 miles away or across the world. This is, after all, why I finally got my license in this damn hobby to begin with. And remember that it IS a hobby - you don't get payed for it, and being in it is a choice not a requirement. You don't have to talk to someone on the radio if you don't want to for any reason you choose. Pardon my language, but quit fucking it up for the rest of us by telling us who we can and cannot talk to as it's OUR choice. And I'm sorry for perpetuating a useless thread with this message, but after reading over 150 messages looking for some reason it's still here and finding none, someone has to say it...

- Ralph Forsythe, KC0CSO

Go to a convenience store,buy a bar a Lava soap,take the wrapper off,and
stick it in your filthy mouth. If you don't like it hit the road with
the homos.

Now we are supposed to believe this fruit? First he begs for acceptance now he wants to tell his life story!Do you believe this moron? No Butt Boy,we do not accept your faggotry. No, we do not want to hear your life story. We are heterosexual,you are not. We are amateur operators,you are not. What kind of common ground are people in this group supposed to share with you? None. Zero.You are a fruit ringer that Melissa the he-she brought into the fray that failed miserably.I am a flamer par-excellence,I saw the thread and I went for the kill. It's not personal,it's the Internet. I was jerking your chain,and you went for it. Now get a grip and I will slink back into the shadows. PS to the group: I'll stay off flaming for a while unless Oris Grim starts more of his crap. Then I guess we'll start over. 73 and I enjoyed it. Jim the Great

The Kemp Road address was a trailer, and the
Worth Street address is a run down row of apartments
that O'Brien refers to as his "town house." The place
is a dump & in a bad section of town.
He's getting ready to move again the end of this month.

Frankie (No License)
```

that's just like kenwood, every time you have a problem with there product
they don't seem to have parts, get an icom, and through that kenwood
junk away. i had a kenwood ts 440 once, and i sure was glad to see that
one go. i am blind, and like icoms service, and there synthesizers.

Hi again Bob,

I forgot, on manuals: try HI Manuals. They are advertised in CQ and
QST I think. Never have been impressed with Kenwood's factory
support organization, from high prices and horror stories I have heard
over the years. Fortunately, the TS820 is not only rugged, it is
REPAIRABLE.

73,
Don, W6JL

3640. Info requested: TenTec 1253 9-band shortwave receiver kit

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-09 00:00:00 UTC
From: Paul Herrera <p-herrera@tamu.edu>
Message-ID: <35048925.617B2F5B@tamu.edu>

Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Has anyone had any experience with either building or using the TenTec 1253 9-band
shortwave receiver kit. I am interested in purchasing the kit as it appears to be an
inexpensive means of getting into SWLing. I would like to know how well the kit
assembles, plus any hints or problems. I would also like to know how well the unit
performs.

Paul Herrera

Hi Bob OM,
Probably just an open resistor in the screen voltage divider,
which sets the power level for tune. There is no adjustment.
I never use tune mode on my TS820. Just tune it up per normal,
nothing will blow up. Trust me, I been using mine for 18 years
now (still original 6146's; they can last a lifetime with care)!
You can also use the FSK position,and tune it up for about 110
mA plate current, about 40 watts out. The rig has auto power reduction
for FSK operation. It is an excellent rig for all modes, including
AMTOR/PACTOR/RTTY. I would not part with mine.
Vacuum tube finals are not persnickety like solid state ones,
(damned hard to short the 'collector' to 'emitter of a 6146). The
pi network output allows vastly greater tolerance of (and matching
capability to) high SWR loads than the auto-shutdown SS final amps.
Enjoy!

73, Don, W6JL

If people spent all of this energy and time learning International Morse Code rather than endlessly debating its necessity, then the issue would be moot.

Code should stay as a requirement for HF privileges. If you don't like it, then use the HUGE amount of spectrum allocated from 6 meters to light. Or learn the code. Hey you can work DX on 6! I've done it with a modest station setup. There's lots of potential uses and if we hams don't start using the UHF and microwave bands, then kiss 'em goodby. The Govt will auction them off to Compaq, Motorola and Disney.

3659. FOR SALE: KENWOOD TS-820S W/CW FILTER

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-09 00:00:00 UTC
From: wa6gsd@ix.netcom.com
Message-ID: <3504B5A6.3B8B@ix.netcom.com>
Source record: 176235
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.misc,rec.radio.amateur.equipment

I have for sale a very clean, full output Kenwood TS-820S transceiver
with optional CW filter installed.

For those who are not familiar with this unit, it is a fully self
contained 100 watt transceiver covering 160 to 10 meters, SSB or
CW. This unit does not have WARC bands or gereral coverage receive.
It operates from 110V AC and has all power supplies built in.

The unit has digital display (green flourescent) and is all solid
state with the exception of a PA driver tube and a pair of 6146's
in the output. THe unit has Pi-net output, meaning that unlike newer
rigs with a fixed 50 ohm output, will match antennas having impedances
of 50 to 75 ohms.

Asking $350, and I Am located in Southern california.

Any questions, just ask..

Thanks for reading.

Actually, no mention is made in the US regs as to intent or purpose (lucky for us that many government regs are written in the "Thou Shall Not Do.." sense, rather in in the much more restrictive "Thou May Only Do..." sense - what ever is not prohibited, is permitted).

>From time to time, you'd read articles in the electronic and ham magazines
>about this band, and they tended to be about using the band as a hobby,
>not as a demonstration at a science fair.

Again, you will not find anything prohibiting hobby-type operating. US Part 15 "users" include hobbyists, garage door openers, computers, hospital heart monitors, tunnel broadcast band radiators (so you can listen to your favorite station while you drive through a tunnel), wireless mics, CB walkie-talkies, et cetera.

Jeff

Don't look now Bryan, but about half of the no-code-test folk here are general/advanced/extra hams who have been there, done that and would rather be endlessly debating than beeping. :-) Can you imagine debating Morse code testing on CW?

No, it isn't. Spam proofing only requires that you spoof your address
ONCE. You seem to be doing it on a daily basis. The only reason I
can think of for this is to avoid killfiles. This makes you a form of
spammer yourself.

If you think anyone believes your excuse, then you are the fool.

From: Tom@astro.net
Message-ID: <6dve95$n8d$1@news.mhv.net>
Source record: 176250

Is anyone else using the IC-706MKII and the MFJ-969? I'm new to manual tuning and can not figure out how to tune. I've tried everything in the tuner manual with no luck yet. Just got them yesterday. Could you tell me the steps you use to tune the rig with it? ANY help greatly appreciated!!! I'm going nuts trying to figure it out.....

I have been listening on Channel "1" as I drive around, using a DJ-580 dual band handheld hooked to an outside antenna. Occasionally, I hear a conversation. Anybody have any experience with this band?

Radio Shack has a 300 mw unit on sale, but the antenna arrangement looks a little delicate. It was a NEW item in the last catalog, but now is being discontinued.

My DJ 580 is unmodified, so I don't know if it transmits that high, and the frequency won't tune exactly--I can get close but the last digits elude me. But it still picks up the occasional conversation clearly.

It looks like these units are designed for one to two miles range. I'm looking for a way to communicate car-to-car when moving groups of people across town in a "caravan". Somebody always gets caught by a traffic light and we loose them! These units might be a cheap, legal way to keep our non-hams in touch. (We tried CB, but there is too much South American QRM).

It appears that I would pay about $60 for 100 mw units and up to $130 for 500 mw.

I own a Radio Shack HTX-212 2-meter mobile radio. I accidentally activated the Channel 1 Alarm feature (the little bell symbol is displayed and the radio beeps every four seconds).

Pages 16 and 30 of the user manual mention the feature, but don't clearly tell you how to deselect it. Does anybody know how to turn this feature off?

CBRambo wrote in message <19980309010201.UAA29195@ladder03.news.aol.com>...
>There goes your credibility as a peacemaker. Sounded good up until this point,
>though. Tsk, tsk. You lose.

Well, I guess I lost the minute I started replying to nO'Brain. I -- yes, even I -- get angry and say things I regret later. Well, "later" is now, and I regret the fact that I have subjected the members of this newsgroup to a long, pointless, off-topic squabble. No, it's not the end of the world, but it was off-topic, and I apologize to everybody who downloaded this NG hoping to find information of interest to amateur radio ops, and instead found this stupid inflammatory argument in which I took part.

I'd also like to apologize for my use of the word "redneck" in describing nO'Brain; I grew up in a cow-and-coal town in southern Utah, and I know that most of the good folks there were not hypocritical, and even though some of them may not have agreed with my lifestyle, I believe 99% of them would have fought for my right to live free. I learned a lot from those people, and they were among the most honorable people I've ever met.

I plan to do my best to refrain from contributing to stupid, hateful, off-topic discussions like this in the future. I was angry, but I should have controlled myself more.

Thanks to those of you who e-mailed your supportive comments to me; if possible, I would like to repay that support by contributing to this NG instead of detracting from it (as I have done) with inappropriate language and behavior. The reason I started reading this NG in the first place was because of my interest in ham radio. I first got my Novice license in 1983 when I was 15. I let it expire, though, and now I am studying code & theory to get my license back.

For informational purposes: my callsign was WB7LRF, and I have never lived in California like nO'Brain says ... I hope my namesake in Fortuna does not get harassed because of his misguided attempt to "reveal my true identity". In case anybody wants to know, I live in Salt Lake City, and if you want to know more, just ask -- I'm not hiding anything. (Although maybe some of you wish I had been just a LITTLE more discreet, hehehe.)

Anyway, thanks for your patience and support, all ... I hope you'll accept my apology. I would hate it if a few ill-chosen posts jeopardized my ability to participate in this NG.

Sincerely,

Brandon Burt

Why do you think they have a tune mode? Very stupid question why is the
output EXTREMELY LOW. You don't operate it in the tune mode. You tune it.

3694. Kenwood TMV7 TXRX <-> LCD serial protocol

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-09 00:00:00 UTC
From: marc@aargh.mayn.de
Message-ID: <PSVZB*Mqh@aargh.mayn.de>
Source record: 176275
Cross-posted to: sci.electronics.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.misc

Since quite some time I'm trying to remote-control a Kenwood TMV7 radio transceiver.

Unfortunately the mike buttons can't access all of the TMV7 functions. Even worse, the default state (eg after a hard reset) is "no DTMF mike" - so I can't turn on mike buttons from the mike. That's it about the mike, I can't use it for the project.

However, the display ("LCD assy") is connected via a 4 wire cable. The pinout is

1-PSI (serial LCD -> TXRX)
2-PSO (serial TXRX -> LCD)
3-PE (gnd)
4-PB (+13.8v)

So it should be possible to (fully) control the transceiver via this connector.

According to the service manual, the communication is async 3125 bps.

However, the bit timing is 58us (measured with osci), resulting in a rate of 17240bps. If the manual meant BYTE per second, each byte must have 5.5 bits :(Doesn't look too familiar.

I built a receiver circuit, which turns 17240bps raw data (without stop bits) into 57600bps 8N1 for reception on a PC.

I can clearly see the activity when pressing buttons, but there's a lot of traffic. I can't figure out how the buttons are encoded.

Pressing buttons that affect the display output produce far more data than others (although I'm looking at LCD -> TXRX direction). Obviously there's some acknowledgement or repetition of received data.

I never get the same two datasets when pressing the same button twice.

Twice a second, the TXRX sends an "E0" (I interpret data as LSB first, 8 bit into one byte, sync to the first bit of a block, and a block lasts until there's 80 bits of inactivity). The LCD answers with "E8". This checks wether the LCD is still connected.

Here's what I receive when turning the volume knob (dig poti, no display activity):

E8 (LCD still there)
(pause)

```
E8
(pause)

40 8A 01 42 FF FF FF FF FF FF FF FF 07 FF A3 FF

I see a lot of F's, indicating I might oversample the signal. However there are sequences of only one same bit (as in a7), and the shortest interval I measured is what I used as bit time.

The signal looks very fuzzy on the scope, and I can't imagine it can keep sync for that long. It even looks like it is doomed to loose sync after 2 or 3 bits. And there's no regular frame structure like in 8N1 transmissions such as RS232. (I don't think Kenwood uses a PLL to recover bit timing for a 0 to 7 meter digital 0V/5V transmission) :-)

This is my problem, can you help me?

Maybe Kenwood uses this or similar protocols in other products (eg car stereo with display)? Have you seen any Kenwood protocol before?

Every small hint might help.

Are Kenwood service manuals trustworthy? Ie can I rely on the comment about 3125bps and assume there must be some kind of modulation? (Maybe Kenwood does not send a bit as high/low, but as levelchange/nolevelchange? Or even a more complex modulation?)

What experience do you have with Kenwood service manuals?

3695. What's an HP-8640B?

Can anyone tell me about the HP-8640B 0-512MHz Sig Gen in terms of frequency stability and repeatability? Were the modulation and RF sections standard or modular options? What is the unit's weight? Are there any typical faults to look out for? Roughly what is a used one worth nowadays?

Followup set.

From: ham@w3eax.umd.edu
Message-ID: <6e0vraeeh1@w3eax.umd.edu>
Source record: 176277

It occurs to me just how hard it must be working DX from
the middle of North America on 20m during the day.

Someone mentioned "wall to wall" stuff on 20m, and now
that I think about it, it IS wall to wall stuff. I've
worked Sweepstakes, and 1st hop puts you in the great
plains, second hop (if you can hear it) puts you into
the Pacific (from DC).

We on the coasts take it for granted that 20m is a good
DX band because the east coast has the last "launching
pad" to Europe, while the west coast is the last "launching
pad" to the Pacific, meaning that the folks in the middle
have to work through all of the rest of us.

Of course, it's even worse for west coasters working Europe,
and east coasters working the Pacific.

15m, when it's open, seems to hop right over the "mess"
and bounce off the water, making for some good, long
skips.

I would think the same, but I have repaired over a dozen different
HTX-202s that had no transmit (or transmit at ~1 to 5 mW) by
resoldering those connections on the PA transistor. I've also seen the
same radio come back for the same repair the second time, so it
appears not to be simply a problem with the original soldering job. On
all the 202's I've found this problem on, the owner said they had been
running it extensively on hi power using 12 or 13.8V.

However, as you say.... I have no idea how this can be happening!
Several owners did report the case was too hot to touch and they had
to lay the radio down and use a speaker mic.... but as you say, it
takes a LOT of heat melt solder! It remains a mystery to me.

>A very common problem with these radios is that the wire from the RF circuit

YES!! That's true too. I had almost forgotten that one, but have seen
it a number of times as well. Good point!

15m was the best here in Michigan. Worked about 40 or 50 stations just casually tuning through the band, no new ones, except a 9X but looking back in the QSL pile I found that one too. Oh well

It's not hard at all. When 20 is open here, we don't even
hear you guys since most of our paths are around (not over)
the left and right coasts.

> Someone mentioned "wall to wall" stuff on 20m, and now

If your first hop is into the plains, then 20 is waaaaay short.
If 20 is open, your first hop ought to be W6/7. When I was
KG6AQI in the 60's, we hardly *ever* heard W3/4 at the same
time as W5/0, but we *could* hear W6/7 with W3/4, indicating
your first skip on an *open* 20 is about 3200 miles.

3710. FORUM: Bandplanning and No-Code - Life Beyond Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-09 00:00:00 UTC
From: billwa6itf@aol.com
Message-ID: <19980309190800.OAA22096@ladder02.news.aol.com>
Source record: 176291

On Sunday May 17 from 10 M to Noon Eastern Time, our Newsline team will be presenting a live RealAudio "netcast" from the 1998 Dayton Hamvention. Titled "The 2nd Annual Ham Radio Open Town Meeting of the Air," there are at least two topics that will be discussed and debated.

Jim Davis, W2JKD and I will be the co-moderators of this 2-hour Hamvention Forum and live broadcast/netcast.

We wll definately lead off with: "Protecting the Rights of All Hams - Should Adherence to Current Voluntary Bandplans be Made Mandatory?" This is based on an ARRL BoD initiative to seek the FCC to issue a "declatory ruling" that "declares" operation outside the scope of a now voluntary bandplan as becomming "bad operating practice."

We are looking for two presenters to debate this issue: One who is in favor of making bandplans mandatory and codified under FCC rules and another person who is against this idea -- and maybe even against the concept of voluntary bandplans.

If you will be in Dayton for the Hamvention (May 15-17) and would like to be one off the panelsts on this issue, please e-mail me your full name, call sign, telephone number and a short bio. It can go either to billwa6itf@aol.com or newsline@ix.netcom.com

The second topic now definate is "The Success of No-Code: Life Beyond FM and Repeaters." This one is already filled with presenters. These include Hollywood Producer Dave Bell W6AQ as keynoter . He will be followed by at least three no-Code Tech class hams who have proven that a person need not ever learn a dot or dash to become a highly respected member of Amateur Radio society. These include a teenager who spent three months as the "Disaster Relief Communications Officer" scheduling relief efforts in the wake of the Mississippi ever floods a few years ago; another who has become nationally known for his VHF Dxing, contesting, experimenting and articles in several ham radio publications and another codefree Tech who recently returned from a very successful and widely acclaimed "Ham Satellite Packet DXpedition" to the South Pole.

If you cannot attend the Hamvention, this forum will also be carried live on the Internet in RealAudio courtesy of Tuscon Amateur Packet Radio. Their website is located at www.tapr.org.

Whether you join us live at the Hamvention in Dayton or live on the Internet in RealAudio, we hope you take part in the "2nd Annual Ham Radio Town Meeting of the Air."

3711. MIR/APRS FAQs

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-09 00:00:00 UTC
From: K0HB@usa.net
Message-ID: <6e1f5v$vv5$1@nnrp1.dejanews.com>
Source record: 176292

1) Anyone with a packet TNC can participate on 145.985 between 1455z and 1651z on 10 Mar 1988. Passes favor USA where most APRS activity is, but other areas are:
1455-1515z USA (poor in SoCal)
1535-1540z So Africa (low pass to south)
1555-1610z W. Australia
1615-1620z Japan (low SE pass)
1630-1650z USA (poor for Maine)
1655-1705z Brazil
1715-1720z S. Africa
1745-1800z Japan

I think it will be OK for Brazil, S.Africa and Japan to continue the experiment past the published 1651z stop time through the end of that orbit to 1800z, as the published 1651z was an LOS for the USA.

2) APRS stations with APRSdos should set C-F-FADE to 0 or toggle it off so that grid-square stations without time stamps are not faded to dark gray. Other possible settings are C-F-OTHER so that you can see ANY UI packet, not just APRS packets. ALso be sure you have CONTROLS-LOG ON and properly exit the program to have all files saved.

3) Stations with out APRS, be sure to set your UNPROTO to:
UNPROTO GGGGGG VIA R0MIR and set your BText to]$[comment where the $ can be any of the previoiusly announced APRS ICON characters and comment can be anything *brief*... GGGGGG is your 6 digit gridsquare. Make up the final GG if you dont know them.

4) Since APRS turns MCOM off, APRS users will not see the usual CONNECT REQUESTS, and BUSY packets frequent on MIR. If you feel like you must log EVERYPACKET, be sure to run a separate rig and dumb terminal capture program on another TNC with MCOM ON.

5) APRS Mic-Encoder mobile stations can use the Mic-E with NO reprogramming by selecting their path switch to a single WIDE digipeat. A single Kerchunk should get you plotted via MIR on 145.985.

6) Be sure your rig does not have its transmit audio gain too high. It should definately sound "soft". This is due to the +/- 3 KHz doppler making 5KHz deviated rigs splatter except during the 30 seconds only overhead. If you want to improve your chances, back down on the audio to 3KHz deviation..

7) We will have 3 stations digipeating live MIR posits, so you should see MIR moving on your maps. Each of these stations will be uplinking MIR-6 from Calif, MIR-8 from Michigan, and MIR-3 from Maryland. You will

also see the R0MIR posit at 3822.00N and 12038.00 whenever MIR beacons its pre-canned fixed position report (no matter where it is).

INTERNET: THere are MANY APRS internet sites that provide LIVE feeds. If you have a browser, point to www.aprs.net. This uses javAPRS to run your display. Kinda slow, but it works. If you have any of the INTERNET capable versions of APRS, then TCPIP to www.aprs.net and you will have full send/receive APRS interraction with everyone in the whole USA... If you have neither, but have plain ole TELNET access, then TELNET to www.aprs.net port 23 and you will see the steady stream of packets from everyone in the country. If port 23 doesnt work, try

port 10151. THe 10151 port dumps about the last 1000 packets heard to fill you in on the last 24 hours of activity...

There is also http://www.aprs.net/mirex.html which will filter out ONLY the MIR packets and show you only what comes via MIR...

This is only a test. Hope we remembered everything...

From WB4APR

In article <19980303160501.LAA11116@ladder02.news.aol.com>, hleiser@aol.com says...
>
>2) Can someone recommend a handi-talkie - by brand and model number - >which will be VERY light, durable and reliable and will take a charge quickly > (charger must also be VERY light)

Well, I personally like the Yaesu FT-50RD. It's a tiny little dual-band HT that has a full 5 watts output (selectable for lower power of course) and relatively speaking is quite affordable. It's also MIL-Spec 810 certified to shock and vibration as well as being splashproof, which is good if you will be riding in the rain or accidentally dropping it.
As for chargers - since the battery packs for those don't take a lot of juice to work, you might consider a small solar panel system. It sounds like you will be riding through a fairly sunny region, and small panel arrays can be bought to do exactly what you want fairly cheaply.

>3) What band(s) will be best for abundance of repeaters on my trip - San >Diego, CA to St. Augustine, FL.

Probably 2M and 70cm, which the FT50 will cover...

Also saw something recently in an issue of (I think) CQ magazine where somebody mounted a gain antenna on the back of their bicycle for their HT. You might check that out since if you did that you could work with less power out and hence save battery life a lot longer...

3719. Oris Spams and Spoofs while his daughters starve!

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-10 00:00:00 UTC
From: James O'Brien <kd4cdb@mindspring.com>
Message-ID: <3505C246.46CA@mindspring.com>
Source record: 176101

Here is the financial sitiuation at Oris Grim's dump:
HTX 100
I have a HTX-100 10-meter Moblie that I
would like to trade for a Kenwood
TM-201a or better 2-meter rig. My BBS on
the Hamnet is down, and I'm wanting to
get it back up on line. I need a 2-meter
rig to get it back on line. On a scale of 1-10 this
rig is a 7. I just put a TS 130 in my car
so I have no need for the rig. It has no mods. It
is as stock as the day it came out of the
box. The rig comes with mic, and DC power
cables. A guy was supposed to send a ICOM
2-meter moblie for it and I never heard
from him again. So I'm resubmiting the ad.
I really would prefer Kenwood gear. Thanks
for reading and 73 -
Oris Grim , N3CND , 5591 Jot-em-down Rd. ,
Danielsville , Ga. USA 30633 , phone:
(706)789-3505 , Email: n3cnd@g-net.net -
Feb/19/98 - Ad Number:6975

Most people just throw these rigs in the trash. But Oris has spent
hundreds on 811 tubes that he has burnt up jamming 3894.5 and on web
space while his young daughters walk around in dirty clothes hungry. He
does not work,he make s his wife go out and earn their keep. Want to get
Oris to stop posting this crap with the forged headers? Give him a call
and tell him what you think.

ALINCO DX77 vs DX70

No six-meters.
No TXIT.
Keyer comes standard (No message memory).
No detachable control-head.
No SSB filter.
LCD and heatsink are the same.
No option for mobile bracket.(Has holes for a bracket though).
No Auto Power Off.
Priced about $200 more then DX70.(Can't be! Ought to check this again)
Price may come down in future but still doubtful whether its worthwhile.

Hi,
I picked up a Swan 700 cx and it didnt come with the power cord for
the power supply. If someone out there has one, could you tell me what
of the many pins on the power supply are the 120v connections?
Would appreciate any and all help.
Thanks,
Rick N8MKP

Thanks Mark,

Just as an update, we actually got 68 people show up for the No Code Technician class, and 12 people in the General Code Class. All 68 people passed the No Code exams and will most likely have their callsigns by Wednesday morning. We had 12 people pass their 13wpm exam, and their written General class exams. They are now on HF signing "Temporary AG"! Three people in the class went on to take the 20wpm code exam, and all three passed. One person took, and passed his Advanced written exam. One other individual came to the No Code Technician class, and then went on to get his General license, all in one sitting.

George,

That is the crux of my problem. I can only get about 1 to 2 watts out on TUN.
I have gotten info from this post that leads me to go look for a pair of resistors
that get switched into the screen grid circuit in the TUN mode. Then I can get
it back to where the level ought to be. If I had 20W I'd be very happy. It is
apparent that it is sick. Now I'll get it well.

I also located a source for a service manual. A money order is going in tonight's
mailbag from the right coast to the left coast.

For a lot of the rest of the folks; I know how to tune a rig. Been at it a little while,
something around twenty years. I have never had a solid state HF rig. I have
used a few. I prefer my tube finals, Thank You.

I use and like XMLOG. Not big and complicated but does what I need to do for tracking DXCC and others. Has a packet interface for DX spotting and voice or CW announcements for countries I need. The best part is that it is free. Although I would register it in a minute if they would except my money. I would suggest that you at least give it a try. It's available at
http://www.xmlog.com/

Congress passed a law that limits our rights to listen to radio waves that pass through our houses. Until Congress the ban on scanners that receive cellular telephone frequencies, we were allowed to listen to anything as long as we did not discuss it.

Big business wanted a cheap means to avoid encryption of CelTel radios. It would be funny McDermott has the law over turned!

When I try to read the codeplug, the software reports "Busy Line Locked". RIB and other software work ok on the other radios. I've tried another cable, AND another RIB with same results, along with 3 different versions of software. AARGHHHH !!! Is it possible to jumper this line internally, off the mic connector, to cause this problem?

I am new to the world of ham radio, just got my tech license 3 weeks ago, and was wondering if anyone could provide me with some information about the mfj-9406 six meter radio. Is this a good radio for the price? ($249) How does it perform? Is there any known problems with it? I am very inexperienced, is this a good radio for a beginner on six? I have also thought about the tentec 2m to 6m transverter. Would this be a better option? I have only an fm 2m rig, so I would only be able to use 6 fm. Does this tranverter allow repeater operation? with correct offsets and sub audible tones? What about an antenna? My neighborhood doesn't allow radio towers, but I could put a small pole in the air, like those used for tv antennas. What would be best in this situation? a 6m loop? A small light weight beam on a tv rotator like the mfj-1762 6m beam? A dipole? Thank you in advance for any information.

Mindspring "allows" their customer to exercise his constitutional rights
regarding freedom of speech. If people like you would quit responding to him,
he'd go away. Sorry to have to be so "blunt", but it's pretty obvious to a guy
like me, sitting on the sidelines.

3764. SONY ICF2010: replacing front-end FET 2SK152

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-10 00:00:00 UTC
From: glv@idirect.com
Message-ID: <350545c8.2071882@meganews.idirect.com>
Source record: 176166
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.shortwave

I am looking for the BEST or BETTER substitute for the 2SK152 FET in the front-end of my SONY ICF 2010 shortwave radio. It must be low-noise and broadband (.1 to 30 MHz).

From the SONY ICF2010 FAQ file:

"Transistor Q303 in the front-end of the Sony ICF-2010 is easily damaged by static electricity."

"The popular MPF-102 transistor, available at Radio Shack, is a suitable replacement, as are several other N channel JFETs (Sony used a 2SK152, not widely available, and rather pricey, in the U.S.A.)"

One web site claims that the ADI rig is the same technology and that the ADI mods will work. I will ask him to relay the web site to you. I know he started with the Univ. of Ark site and kept working through the links. Supposedly, it is a mod which can be done with the function key and the keyboard.

I am having a quad loop put up. I will feed it with coax. I have a ts940 and Alpha 78. I use the tuner in the 940, but I wonder if I need a tuner between the amp and ant? If you can help, I appreciate it. I figured this was the best to put this msg because I think this is supposed to be a ham news group. John Fearon w4wkp

Sorry folks, but this all presupposes that increasing OOK speed is a good and nesessary thing, which it isn't. Time would be better spent collecting rocks from New Mexico and hauling them to Kansas to equal out the content of same and to change the skyline a tad for the good Kansas folks. But just as in the Code issue, who needs it? Note I said "NEED" and not want. Many like or want Morse, they just want the testing of same to be removed, altered some, for HF Access. To any rational person that is a desirable and doable notion. So doable infact, it will be done, in Cal as it is in Del, it will be done, in New Jersey as it is in Maryland. That would make a great mantra if you do those things.

Hi John,

Assuming your antenna presents a good match (less than 2:1 VSWR) to your transmitter, I'd suggest that you never use an antenna tuner.

Hans

3779. Lighthouse/Lightship operation event

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-10 00:00:00 UTC
From: K0HB@usa.net
Message-ID: <6e41it$t0b$1@nnrp1.dejanews.com>
Source record: 176181
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.dx

There is going to be a Lighthouse/Lightship Activity Weekend in 1998 from 0001 UTC on Saturday 22 August until 2359 UTC on Sunday 23 August 1998.

Some details of the event, the event is NOT a contest, each station decides how they will operate their station regards modes and bands. There is no restrictions on aerials or power. Hours of operations are at the discretion of each station within the time frame of the event. We wish operators to enjoy themselves and have fun whilst making contact with as many stations as possible, these stations do not have to be another lighthouse or lightship. Some operators say fun - 10,000 contacts - OK, but we request that stations take some time to work the slow operator, the newly licensed and QRP stations.

This event is used to obtain maximum exposure for our hobby. We invite the press and, QTH permitting, also the public and try to underline the obvious parallel between the international aspect in lighthouses, lightships and amateur radio.

We use the event segment of the 5 'Classic' bands with a centre frequency if conditions are bad, at least we have one place we can (try to) meet. We request that the centre frequency is not used for pileups.

CW
80m 3.510 - 3.540 Khz Centre 3.521 +/-
40m 7.005 - 7.035 7.021 +/-
20m 14.010 - 14.040 14.021 +/-
15m 21.010 - 21.040 21.021 +/-
10m 28.010 - 28.040 28.021 +/-

PHONE
80m 3.650 - 3.750 Khz Centre 3.721 +/-
40m 7.040 - 7.100 7.051 +/-
20m 14.125 - 14.275 14.221 +/-
15m 21.150 - 21.250 21.221 +/-
10m 28.300 - 28.400 28.351 +/-

To assist other stations we request that participating stations add 'LIGHT' , 'LGT' , 'LIGHTHOUSE' or 'LIGHTSHIP' after their call.

I have listed the countries that have indictated they will be joining in the fun of the weekend and some of the stations.

ARGENTINA
LU9VET and group are looking for a lighthouse in Argentina, possibly Punta Delgada 42.46S 062.40W.

AUSTRALIA
VK2BA hope to be QRV from the Queensland Maritime Museum which has a lighthouse and lightship.
Australian Naval ARS are currently canvassing their members.

BELGIUM
ON4BRN Lightship Westhinder which is at Zeebrugge.

CANADA
VA3TJP will be at an unmanned maritime beacon at Lac des Chats, Ottawa.
VE3CGJ HMCS Haida at tyhe Naval Museum in Toronto will be QRGV to work lighthouses and lightships.

DENMARK
OZ7DAL Lightship Fyrskib XXI at Edeltoft.
OZ1VYL Lightship Motorfyrskib 1 at Esbjerg.
OZ9DSB Lighthouse at Sprogo Fyr, in the middle of Store Belt, special permission.
OZ5DSB Lighthouse at Fornaes Fyr, at the tip of the nose of Jutland.

ENGLAND
GB2HL Haisborough Lighthouse.
GB2SBL St. Bees Head Lighthouse.
GB2PL Pendeen Lighthouse.
G0VOP/P Portland Bill Lighthouse.
Hull & DARC will activate the lightship that was at Spurn Head and is now in dock in Hull.
Scarborough Special Event Group are awaiting their AGM before deciding on a site.
South Tyneside RC will likely activate Whitburn Lighthouse.
G7UVY and group will be at Lowestoft Lighthouse.
Silverthorn RC are trying to get permission to operate from the lightship in St. Katherine's Yacht Haven, London.
GB2SFL South Foreland Lighthouse. Approval is being sought from the local owners.

FAROE ISLAND
OY6FRA It is hoped that the lighthouse at Torshavn will be QRV during the weekend.

FINLAND
OH1AH Top Hat Club are seeking permission to operate from Uto.
OH8AA Viitosten Kerho ry hope to be QRV from the old lightship Rellu in Kotka.
OH8TA Oulun Teekkarien Radiokerho ry will be at the lighthouse on Hailuoto Island.

FRANCE
F6KUM Dieppe RC will be at the lighthouse Ailly which is 15 KM from Dieppe.

GIBRALTAR
ZB2LGT Lighthouse at Gibraltar.

GREECE
Different clubs in Athens are looking for lighthouses to activate. I expect

at least one.

ICELAND
There is the possibility of activity from Iceland.

ISLE OF MAN
GT3FLH Point of Ayre Lighthouse.

ITALY
IK0IXI Fabio is looking for a suitable site.
IK0JMS His local club is looking for a site.

NETHERLANDS
PA6LH? Lighthouse on the Island of Egmond aan Zee.

NEW ZEALAND
ZL1AB NZART Branch 29 & 80 are planning a trip to Tiritiri Matangi Island.
ZL1FNB Cape Regina Lighthouse.
ZL2AFV Looking and will advise.
ZL4AA Obtaining permission to operate from Taiaroa Heads Lighthouse.

PORTUGAL
It is hoped to have activity from Portugal.

PUERTO RICO
KP4ES Lighthouse in Puerto Rico and they are trying to get more clubs QRV.

SCOTLAND
GB2LBN Barns Ness Lighthouse.
GB2LKH Scottish Lighthouse Museum at Kinnard Head.
It is hoped to have a total of ten stations active from lighthouses in Scotland.

SOUTH AFRICA
ZS1YT Lighthouse at Cape Agulhas, souththermost most tip of Africa.
ZS1MP Lighthouse at Cape Point.
ZS1RON Slangkop Lighthouse.
ZS1ACH It is hope to have a station on Robben Island, where Nelson Mandela was imprisoned.
ZS1B Green Point Lighthouse.

SPAIN
It is hoped to have activity from Spain.

SWEDEN
It is anticipated that the following stations that were QRV in 1997 will be active in 1998 and coordinated by the SSA.
SK7DD Lighthouse Kullen, one of the oldest in Sweden.
SK6FL Lightship Fladen at Goteborg.
SK7FK Lighthouse at Utklippans.
7S0SFJ Lightship Finnngrundet in Stockholm.

SVALBARD ISLAND
JW6RHA Unni advises that there is an international YL meeting on Svalbard

Island during the weekend and she hopes to have stations QRV from different locations.

TURKEY
TA7KA Trabzon, Turkey. Notification of site nearer the time.

U.S.A.
K2AA Lightship LV79 in New Jersey.
W7BU Lightship Columbia at Astoria, Oregon.
NA2V Staten Island Lighthouse.
KL7AA Anchorage ARC are looking for a lighthouse or similar.
KC8ELY Great Lakes AR Rovers are getting organised and will advise site.
K1USN USS Salem will be QRV to work lighthouses and lightships.
NJ6VT USS Pampanito will also be QRV to work lighthouses and lightships.

WALES

GB2MHL Lightship at Milford Haven.

SM, LA, DL, PA, CT and EA are looked after by other amateur coordinators on the continent of Europe and have yet to notify me of callsigns.

So if you fancy establishing a station at a lighthouse, lightship or maritime light come and join us in the fun of the weekend. If you do intend to join us could you let me know and also the QTH and QSL information.

Vy 73 from Scotland

I've had no experience with the MFJ-9406 but understand that it is a pretty good radio considering the price. I have had experience with the Ten-Tec 2m-6m transverter and can say that is is VERY good. I built the kit version that cost $95 and would say that the assembled version at $165 has to be a bargain. Advantages: operates any mode that your 2 meter radio operates. Disadvantages: operates any mode that your 2 meter radio operates - if your 2m is fm only then you get fm only out of the transverter, and for 6m you really want sideband capabilities. I am using my transverter with an all mode Yaesu 2 meter (FT-290RII) and it works like a champ. If you should buy the transverter you MUST keep one thing in mind: KEEP THE INPUT POWER TO THE TRANSVERTER AT 5 WATTS OR LESS, otherwise you can damage the transverter.

Overall, I am very satisfied with the Ten-Tec transverter and would recommend it to someone that wanted to get a taste of 6 meters but had only 2 meter equipment and needed to spend as little money as possible to get on 6.

I am new to the world of ham radio, just got my tech license 3 weeks ago, and was wondering if anyone could provide me with some information about the mfj-9406 six meter radio. Is this a good radio for the price? ($249) How does it perform? Is there any known problems with it? I am very inexperienced, is this a good radio for a beginner on six? I have also thought about the tentec 2m to 6m transverter. Would this be a better option? I have only an fm 2m rig, so I would only be able to use 6 fm. Does this tranverter allow repeater operation? with correct offsets and sub audible tones? What about an antenna? My neighborhood doesn't allow radio towers, but I could put a small pole in the air, like those used for tv antennas. What would be best in this situation? a 6m loop? A small light weight beam on a tv rotator like the mfj-1762 6m beam? A dipole? Thank you in advance for any information.

I failed to address your other points.

(1) use of the transverter with repeaters is no problem. Set your offsets on 2 meters to the 6 meter offset rather than the common 600k 2 meter offset. Pl tones go through just like on 2 meters. If your 6 meter repeater needs a 110.9 tone, just set your 2 meter rig for a 110.9 tone or whatever is required.
(2) antennas - I have a AEA 6 meter loop that I use and it works good, but it is horizontally polarized, and thus works best for sideband (sideband antennas normally are horizontal, fm are vertically polarized). Don't know about MFJ antenna but would have no reason to think that it would not be a good antenna, but again, if you are on fm you should mount it vertical, ssb go horizontal. Also, if you are fm only you might try a 6 meter J-pole that you can buy commercially or make one yourself.

Why slam anyone? It's a generalization that's unfair. Even though you're trying to limit it here. And now that you've admitted it was not in jest, but a slam, no one's sense of humor is in question.

Bob,
The TUN mode puts out about 20W on my TS-820S. You use it when you first tune up to set the ALC level. (Switch to TUN, meter to ALC, peak it with DRIVE, then switch to IP and dip PLATE...still in TUN. Switch to CW, meter in IP, dip PLATE, meter to RF, max with LOAD, back to IP, dip...repeat LOAD and PLATE as required for maximum smoke.)

While in TUN, you can adjust any antenna tuner you have in-line for min. SWR. You can also use the TUN mode for plotting SWR curves for your antennae. Otherwise, it's only there for peaking the ALC level. (NOTE: You may have to back off on the carrier level if the ALC goes off scale high, which it may do on 40m or 75m; otherwise, mid-scale seems to be adequate.)

Hope that helps. (BTW, the Kenwood site has all the service bulletins for the 820, some of which you may find useful...especially if your digital display goes haywire when operating on 10 meters!)

If they still existed as more than a computer-training and home
security company, I'm sure it'd upset them.

I'm sure that the folks who used to work for them would be and
probably are proud to have been a part of something so substantial
and lasting, yet quite sad that it ended as it did.

HOWEVER, let's not forget that kitbuilding lives...sure, you can't
buy a kit to make a 1,200 watt amplifier, but you can buy dozens
of single- and multi-band QRP rigs, station accessories, paddles,
and other goodies which are sold by a wide array of smaller
companies who have helped to fill Heath's void.

Which is an absurd position. 100 watts is only 2 cents an hour, or $14.40
a month. That's a mighty peculiar notion of "very rich".

But in fact the FCC doesn't license anything less than a Class A station
anymore. That's 3 kW, and that costs about 60 cents an hour, or $432 a
month. That's still not what I'd call "very rich", but it is a bit heavy for a
casual hobbyist. And indeed that's the intent, to keep the casual hobbyist
from frivolously tying up broadcast frequencies.

Of course broadcast licenses aren't the issue here. Rather the issue
is Type Acceptance (or Part 15 Certification), which the equipment
being touted is unlikely to meet. It is illegal to market a device for use
in the broadcast band which doesn't meet one or the other of those
criteria.

saturday.....March 14, 1998
Its the second Saturday of the month, coming up this Saturday. Fontana
Swap Meet at A.B Miller High School, 6821 Oleander Ave., Fontana, Calif.

Take the 10, San Bernardino Freeway east to Citrus
Ave, North to Baseline, turn right to Oleander and north (Left) to the
School.

Pomona Freeway Eastbound to the 15 Freeway, North to the San Bernardino
Freeway then follow the directions above.

Time: around 6 AM to 11 AM.

This event is sponsored by the Inland Empire Amateur Radio Club.

Last month and the month prior was a "Rain Out", so this Saturday, with
the closure of De Vry Swap Meet...should be a sell out!!! Bring your
"Goodies", See you there..

Lonnie (NT6B)

3796. FS: Two RCA 45 Used Tubes with Readings-No Luck of the Draw Like Cheaper Pulls

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-11 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6e6ap4$3q7$4@csu-b.csuohio.edu>
Source record: 176049

Two RCA #45 used tubes for sale with my actual TV-7D/U's readings/ratings for each tube--which high volume dealers don't have the time economically to provide.

Some Tube dealers will charge obviously less for these 45 "used tubes," but often you get what you pay for. I've seen prices of $30 to $40 range for example. BUT--It's the luck of the draw if you get a strong one or weak one that meets minimum standards. With these two RCA 45 tubes you know exactly their readings.

These two RCA 45 tubes were evaluated on a calibrated TV-7D/U tester in excellent shape (Please understand your readings can vary obviously).

I have had this experience of buying from big name honest dealers and getting weak pulls as well as good pulls. Again, luck of the draw for a cheaper price.

Have rated and priced the following two tubes accordingly:

Tube 1: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 78

Asking price $45.00 or B/O plus shipping. This tests approximately like a new tube in my opinion!!!

Tube 2: RCA 45

TV-7D/U's Minimum Acceptable Value = 47

" Actual Reading for tube 1 = 65

Asking price $35.00 or B/O plus shipping. This is a strong used tube in my opinion.

International buyer welcome.

Thank you.

Hi Worthlin,
Well you might try 160 or 75 meters. There are always some good chats there
at night. (hi, hi).

Most IRC programs will let you scan for groups. You might want to try to scan
for those that start with ham or radio or such.

Nope. They consolidated the First and Second Class Radiotelephone Licenses
into the one General Radiotelephone License, but there are still separate
radiotelegraph licenses. For current Extra class Amateur license holders,
the code requirement for the Second Class Radiotelegraph License is waived.
The First Class code requirement is 25 wpm.

What Mr. Dunnifer et. al. are talking about are the ungodly filing
and crushing licensing fees. The actuall transmitters for such a station
could be made FCC compliant for _well_ under $1,000!

That sir, is sooooo much horse poop. Are you being serious here? Am I
missing a joke? ;-) Run over to the FCC homepage right quick and see just
how much it costs to _file_ for broadcast bandwith! Krikey! At least two
Kilobucks just to file! Yow!

When you add in lawyers fees and engineering reports *whew*.

The gist of the two petitions recently filed with the FCC (and by the way,
recieving serious consideration, despite their flaws...) is that
type-certified low-power stations should be allowed. I know of at least
two very law-abiding clean-signal-anal hams in my town who are frothing at
the mouth for the suggested rules in these petitions to be put into part
15!

You should check these petitions out. They are on the FCC homepage in
.pdf format. They make for interesting reading!

3804. How do I get rid of this whine???

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-11 00:00:00 UTC
From: bruce.barnes@unocal.cox
Message-ID: <3506d332.1072788@news>
Source record: 176057

I have a whine where I didn't before...

I have a trunk-mounted Yaesu FT-8100. I replaced the mag-mount antenna last week with a trunk mounted one. Immediately I got an alternator whine. It was perfectly quiet with the mag-mount.

I think this has something to do with grounding. When I unscrew the coax shielding just a bit so that the center post is connected, but the shielding pulled back just a bit, the whine goes away. When I screw the shielding back up snug on the antenna connector (SO-239) from the radio, the whine comes back.

Yikes, it was better before, but now I have a hole in my trunk with a nice new antenna. I have a ground wire from the quick-release mount to the car frame and have checked the continuity between the radio and ground, and it is good.

Anyone have a similar experience and willing to share success stories.

Much appreciated,
Bruce Barnes

> "no one" is going to fail

Huh? People only pass the exams if they get 74% or more on their examinations.

> (by the way, what's the passing mark on US amateur exam ??)

74%

> if someone takes your course eh... interesting.

People *will* fail if they don't study, or pay attention to the teacher. However, our courses are very interesting, informative, fun, and enjoyable. They have lots of in-class demonstrations which show electronic and radio principles. We even send morse code using a pickle...

Those motivated to pass amateur radio exams will study, attend classes, pay attention to the teacher, and do well at exams. Those who are good at teaching will exite the student and stimulate their interests.

I see you still didn't answer my questions to you about YOUR course, the one done on the internet that you said you could guarantee would have 200+ people. Why is that, Masa?

Julian

: >to only the very rich.

: Which is an absurd position. 100 watts is only 2 cents an hour, or $14.40
: a month. That's a mighty peculiar notion of "very rich".

It only costs "2 cents an hour" to run a 100 watt ratio station!?!?

I don't think so.... First, that is RF power not electrical power. Second,
there are things like *equipment* (some of which is *mandatory*)

Here is the financial sitiuation at Oris Grim's dump:
HTX 100
I have a HTX-100 10-meter Moblie that I
would like to trade for a Kenwood
TM-201a or better 2-meter rig. My BBS on
the Hamnet is down, and I'm wanting to
get it back up on line. I need a 2-meter
rig to get it back on line. On a scale of 1-10 this
rig is a 7. I just put a TS 130 in my car
so I have no need for the rig. It has no mods. It
is as stock as the day it came out of the
box. The rig comes with mic, and DC power
cables. A guy was supposed to send a ICOM
2-meter moblie for it and I never heard
from him again. So I'm resubmiting the ad.
I really would prefer Kenwood gear. Thanks
for reading and 73 -

PB0AKY seeks EURO manuals and help
Forwarded: (can anyone help this chap???)

From: "F.B.J. de Rooij" <fbjrooy@worldaccess.nl>
To: <bry@mnsinc.com>
Subject: SMB and R209

Hello OM

Maybe you can help me.
I'm A radioamateur and i collect all old army rig. I've a
19-set, a 3030 TRX, 3035 TRX (it's the C-11 TX and R-210 RX),
GRC-9 and so on. Now I've a SMD Tx from the danisch army. By
this TX is a R-209 receiver. Bij the SMD tranceiver I have no
schematic of it. Do you now where I can have it. Maybe you can
thell me.

I'm sorry for the bad English I'm wrote here.

Greetings of Frans - PB0AKY.

>How much is 0dB? Is it true 1S is 6dB?

There is a supposed standard (actually two of them), but they are generally
ignored by the amateur radio manufacturers. For HF receivers, S9 is
supposed to represent an input of 50 uV across 50 ohms. An S unit is
supposed to be 6 db. On VHF/UHF, S9 is supposed to be 5 uV across
50 ohms, and an S unit represents 2 db. But in practice all an S meter
reading represents is a relative sample of the AGC voltage of a HF
receiver, or limiter current in a VHF receiver, and is not trustworthy
as a calibrated measurement.

I'm currently going through "Detection of Signals in Noise" by
McDonough and Whalen. It features application of decision theory
to determining optimum detection strategies in severe noise
environments. That's useful for weak signal system design,
and for reading this newsgroup.

Access is available now WITHOUT code, and those users are NOT PERMITTED to use
code.
The ITU Regulation IS creating one big CB band. Drop the compulsory code
proficiency test, maintain the theory and regulations test and allow them to use
Morse code.

I wasn't sure how to answer a question that I was ask recently. Anyone want to help me out with this one?

Q: Is there any non amateur HF communications license available?

They are looking for point to point and point to multi point Long range communications system. Portable, mobile and fix station operation. HF only no satellites. Need multi freq coverage for US communications day and night. Dont need 100% reliable at all times but daily or several times a day comms for status and supply request. SSB a must, RTTY would be a plus.

Brian,
For the money, it is not a bad deal. I used that rig to start out in 6M; with only a wire dipole mounted below the peaks of the house it allowed for QSO's from southern California to Colorado and Texas, New Mexico and even an Alabama station. The radio does tend to drift a bit, and it has no RIT - though it has 'fine tuning' instead. A very basic radio you basically just plug it in and turn the dial, the receive is quite good; have compared it side-by-side with a Kenwood TS-60s and the MFJ could hear everything the Kenwood could (but the Kenwood was easier to tune, did not drift and you have a few 'gizmos' to help pull a signal out if need be). It is SSB ONLY; no FM and it only covers the 50.0 - 50.3 CW and SSB sub-band (well, a portion of it anyway) so unless you have a lot of locals on 6M SSB (Texas seems to have a lot of 6M operators) there may be a lot of time between QSO's, but when the band is good you will find it fairly easy to cover most states from your location. All in all not a bad way to get on 6M ssb; look around at some swap meets for a used one or check out one of the swap groups.

Hope this helps,

73,
Howard

Didn't the FCC consolidated all the radiotelegraph and radiotelephone
licenses into just the lifetime General Radiotelephone back in '85?

The FCC doesn't license anything under 200 watts in the FM broadcast band. I remember seeing somewhere a low power station taking the FCC to court over it. I could be wrong, but, I think there is a loop hole here .

Sure, there are HF "channels" available. There is plenty of gear manufactured for these uses, all of which use the ITU frequency plan to provide channels throughout the spectrum.

But there must be more to the story than what you posted. Why are the parties insisting on HF and ruling out satellites? On HF, they are going to have to accept interference from others on the channel, which makes it almost mandatory to operate on a schedule. Speaking as a former commercial HF radio operator, I can tell you that it takes a lot of fortitude to listen to HF channels eight or more hours per day. It is quite fatiguing.

unless my memory is not co-operating with me, there are some who would
like to de-regulate amateur radio. This, from what I have been told
(again rumours), would put it a step or two above cb. There are an
increasing number of people who want to gain access to our frequenies,
both above and below 30 mhz, with as little as possible testing.
If you read some of the message, concerning how to I set up my radio,
etc, that are on cb you might become very scared that this type of
knowledge level might come to amateur radio. Granted, I have met some
new amateurs who know very little about adjusting their equipment but
without any educaiton, testing, exams, I am very concerned that within
the next 5 years with 'might' see the significant demise of amateur
radio, as most of us know it.
Sorry if I am getting upset.

That station is still on the air in California. The FCC can not shut it down as a Judge is looking into the fact that the FCC does not issue licenses for stations under 100watts, and therefore limits the airwaves to only the very rich.

We aren't talking about the cost of electricity to run a transmitter!
We are talking about setting up a licensed station which requires
expensive FCC type accepted transmitters and equipment, etc. Also,
there are only so many places and restrictions to where they will ALLOW
you to set up an antenna at that power or higher which brings yet more
expense. How can you think that setting up and running a broadcast
station (with the FCC requirements for operating a 100 watt station)
would only cost $14.40 a month?!

Your example of a radio station is a transmitter sitting by itself (with
no board, CD players, or any other tape machines, etc) in a building
that has free rent and no property tax (possibly a church?) and no
program content going through it.
But even then, you didn't pay the licensing fees, etc, so your station
would not be on the air, in which case it would cost you $zero as the
transmitter would not be using any electricity.

3849. Icom IC-207H TX/RX Mod Wanted

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-12 00:00:00 UTC

Does anyone have the proper modification for the expanded rx/tx for the IC-207H. I have found several, but they conflict. It would appear that cutting D115 expands the rx. One article mentions cutting D118 and D117 for tx. Another mentions also cutting resistor W14???
Would someone please clarify the proper procedure -- preferably via e-mail.
Thanks, Bob (VA3RH)

>transmitter would not be using any electricity.

All of the ancillary equipment is required whether you broadcast or
not, IE you could operate a closed system or be a disco DJ without
need of a license, but you'd still need a board, microphones, playback
equipment, etc. Staffing costs are also the same whether you run a
closed system or a broadcast system. So I don't include them in the
incremental cost of becoming an over the air broadcaster. (But the
equipment and staffing costs are very similar to those of *any* other
small business. One doesn't need to be "very rich" to open a mom
and pop store, and that's what most radio stations are.)

The only cost increments to become a broadcaster rather than a disco
DJ are the capital cost of transmitter and tower, the annual license fee,
plus the operating expense for electricity, Since you can amotize transmitter
and tower costs over 20 years, for such a small station, that is a negligible
part of your annual expense. License fees are waived for non-commercial

operations, so your major annual expense to go broadcast is the power bill for the transmitter. If you want to go commercial, the only change is that a license fee is charged, and that's as little as $200 annually, or a maximum of $2,000, depending on your potential audience size. A low power station would generally fall at the lower end of the fee schedule.

Now as I noted, a Class A station is the smallest station the FCC will license. There is a one time fee of $195 to get a construction permit. I won't include that in your annual operating expenses. Your power bill is about $432 a month, or $5184 a year. Add to that the $200 license fee and you're at $5384 a year to become a radio broadcaster. Amortization of transmitter and tower will add roughly $1,000 a year to that, so for $6,384 per year, you too could take your non-broadcast operation to the airwaves as a commercial broadcaster. That is below the US *poverty line*. It is not the province of the "very rich".

Most radio stations are *small businesses*, not very different in their capital and expense requirements from any other small business. They aren't the province of the "very rich". That's simply absurd. And the judge's ruling that it does limit radio broadcasting to the "very rich" is thus also absurd.

Well, a small station has a $195 construction permit fee and a $200
annual license fee. That certainly doesn't seem "crushing".

>> But in fact the FCC doesn't license anything less than a Class A station
>> anymore. That's 3 kW, and that costs about 60 cents an hour, or $432 a

>how much it costs to _file_ for broadcast bandwith! Krikey! At least two
>Kilobucks just to file! Yow!
>
>When you add in lawyers fees and engineering reports *whew*.

You only incur those sorts of costs if you are moving to amend the
table of allocations for your community. If you file for a channel that
is already in the table of allocations (and there are a number of them
for which there is no currently operating station), you incur only a
$195 fee. For example, if you want a Class A in Covington Georgia,
there's an open allocation there waiting for you.

The vast majority of radio stations are *small businesses*. They are
little different in their expense and revenue streams from any other
small business, like a hair saloon or an auto body repair shop. They
definitely are *not* only the province of the "very rich". That's simply
absurd. Only major stations in major markets start to approach the
sort of level of investment of a McDonalds franchise ($1,000,000)
or of a family owned department store. And even that isn't what I'd
call the province of the "very rich". (The very rich own Walmart, or
a certain software company in Redmond Washington.)

If your business plan is sane enough to convince the bank to back you in opening a coin laundry, then you could also open a small market radio station. The levels of investment required are similar. Now if you're going to tell me that puts you in the league of the "very rich", your idea of rich differs considerably from mine.

Yep, that's about right.

>I don't think so.... First, that is RF power not electrical power.

Yeah, I figured 50% efficiency in the transmitter.

>Second,
>there are things like *equipment* (some of which is *mandatory*)

That's capital budget, not operating expense. About the only thing
that is still mandatory, aside from the transmitter itself, is an EAS
receiver. That, like the transmitter, is a capital item and can be
amortized over a 20 year period. That's only pennies a month in
the operating budget.

>equipment, Marti STLs, transmitter monitoring equipment, modulation monitors,
>headphones, log books, staff salaries, etc.?
>
>Seems to me there is a lot more to a radio station than "$432 a month."

Most of that is capital budget, not operating budget. The tower and transmitter are nearly the only capital items unique to broadcast. The rest would be required if you were just a disco DJ with no broadcast aspirations. And you can amortize capital budget items over their expected lifetimes. That's at least 20 years for transmitter and tower. For a Class A, you aren't looking at a $100,000 tower or a $30,000 transmitter anyway. You're looking at a $10,000 tower and a $5,000 transmitter.

Staff salaries exist for any small business with employees. If you were running an auto body shop, you'd have those too. Consumables are also part of any small business operation. Radio is generally a *small business*. It is not the province of the "very rich". That's absurd. Most radio stations are mom and pop operations.

Most of the people on this thread seem to look at this as a *hobby*, and broadcasting *as a hobby* would be rather expensive. But as a small business, it is not expensive. Most stations net a comfortable living for their owners, just as a hair saloon or an auto body shop might. The level of investment required isn't much different than to open a coin laundry.

What seems lacking here is *perspective*. Consider that a McDonalds franchise costs $1,000,000. That would put up one mighty fine radio broadcast facility, considerably better than 99% of the Class A stations in existence. You can actually get a Class A on the air for under $20,000 if you don't mind buying some used equipment. That amortizes out to a little over $1,000 a year on your operating budget. That's *well* below your power bill for the year. And both together total to less than the

poverty line in the US. Saying broadcast is the province of the "very rich" is nonsense.

The vast majority of broadcasters are mom and pop operations. But they *are* businesses, not really much different from a hair saloon or an auto body shop. They are how middle class people earn their living. Broadcasting isn't a hobbyist playground, it is a serious business that keeps the kids fed and clothed.

The RS speaker mic is notorious for that problem. Either use the mic built
into the front of the radio or buy one of the ICOM speaker mics that will
also fit that radio.

QRZ will show you which ones are unassigned, but not which ones have been unassigned for two years or more which is the criteria for routine vanity assignment.

I understand you can phone the FCC and they will look up whether or not a callsign you are interested in is, in fact, available for vanity assignment, but I believe there is limit on how many they will look up for you on each phone call.

Good luck!

3866. 2M HT paging/calling feature question

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-12 00:00:00 UTC
From: astro@spambai.reno.nv.us
Message-ID: <35084519.0@news.greatbasin.net>
Source record: 176014

A general question to you equipment guru's:

Having spent some time on HF, I want to try 2 meter HT's.

Can anyone fill me in on the "paging" and "call channel" features referred to in advertisements?

EXAMPLE:
Standard C-178A: 5 Watt 2 meters and low power (50 mw) 440. 40 Memories, expandable. CTCSS encode/decode. Paging. Scanning. The receive frequency coverage is 110-174 (includes AM air band) and 320-474 mhz.

Is "paging" a low power recieve-only mode that "wakes up" the radio when triggered by the proper sub-audible code? When paged or called, how do they respond, like a cell phone ringing?

Any info would be appreciated. Please remove space from return address to respond.

Get Cable as soon as possible!

It is illegal to monitor without a license!

If you ask him nicely, he may be willing to pay for the initial cable
hook-up just to maintain his privacy.....

Don't feel so hopeless. This could be fought in court. Nailing a
democrat was the best thing that could happen to us. Let the central
planning types discover what taking away freedom results in.

In time I believe that this will reverse.

I agree 100% Ralph, What difference does it make at the opposite end of a microphone or keyboard? I bet a great majority of those people who post that nasty shit would not have the shear balls to say such things to someones face lest they get a 9mm pointed back at them.. So the keyboard bravado and hate is just totally worthless, empty crap.

After shopping at a local Santa Rosa, CA Safeway last night, I was checking the receipt and noted that it said:

"As of today, you have accumulated $18 toward your one half price ham award."

I wonder if I can get my 160 Meter DXCC at 50 countries instead of 100? ...Or WAS at 25 states? ...Maybe with 280 total confirmed, I can be the top DX hog with an implied 560 countries!!!

I gotta check this out further - or maybe I've been buying too much of their cheap wine...

Message-ID: <3508B53A.86CD5340@flinet.com>
Source record: 176026

What would happen? Probably you would see more of the same thing. That is to say, you would see a lot more radio gear being sold, more profits for the radio makers, more models available to the world, etc. The downside: massive overcrowding of the frequency spectrum. As people want more and more to communicate with one another, their demands on the available spectrum would go very very high, especially if the equipment is even cheaper than it now is, which it would be with the increased supply. Then again, maybe it would drive prices up, but I think more that it would create more companies producing low cost radios. Would it be like CB? Yes and no again. Some aspects of the hobby already are CB like, other aspects remain pretty much the same. But you can say that about a lot of things.

Bottom line: I doubt you will see the theory dropped. Code requirements could drop off in a lot of areas, but the theory will remain for the time being.

I am more interested in the movement by the ARRL to petition the FCC to take over all aspects of licensing (privatizing) of amateur radio. That should be interesting to see how Gettysburg responds. I can see where other companies would cry fowl for that, and demand competition for more than one company (monopoly) to control the licensing and testing.

No, but I'm _trying_ to read "Digital Techniques in Frequency
Synthesis" by Bar-Giora Goldberg. Only every bookstore I can find
online in America is sold out, and it's out of print. And I meant
to order it months ago. Aarrggh.

I'm working on understanding sigma delta modulated fractional-N
synthesizers, and I hear this is pretty much the most complete
treatment of the subject.

I also own the MFJ Pocket Morse Code Tutor and it's VERY flexable.
I can set all sorts of things on it to help me practice. The most
important feature is the user selected character set. It provides
random characters for the set of characters I select. This allows
me to pick the "problem" characters and work on them.

Currently there are 3 different models of this Tutor. The prices
are: $40, $60, & $80. Also there's an older model of this Tutor.
If you're going to purchase the Tutor, make sure you know which
model you're getting. Better yet, Buy the top of the line unit
with the LCD for $80. It has some great and useful features that
the lower models don't have.

If you consider of your eavesdropping hobby (scanning phone calls) in the same sense as peering in your neighbor's window with a pair of binoculars (an act of being a "Peeping Tom"), then hopefully you'll realize your voyeurism is not healthy and may be an indication of some deeply rooted problem.

Our Congress is doing exactly what I pay them to do. It's just a pity that the Electronics Privacy Act isn't enforceable.

Jeff KH2PZ

P.S. Say Greg, you didn't happen to appear in that QualCom commercial - you know the one - the midgets are hiding in a cafe trying to scan some fellow's phone call.

> straight key.
>

While I am very, very far from being an expert, paddles are best when YOU are comfortable. The purpose is both speed and definition (spacing and weight). I think your target in the "C" example is the former. If you use the press, press, press,press technique, your wrist will get very tired and you will - at higher speeds - defeat the definition purpose since the spacing is under the control of you wrist and not the keyer. As your wrist tires, your speed limit is limited. (As an analogy in speaking, you say the words and not the letters, if you were to spell all words your speaking speed is limited and inflection/continuity is lost)

GL and hope this helps. BTW My bet is on your daughter out pacing you

As a ham radio operator myself, I can tell you that MOST (not all) ham
radio operators
will do almost anything to keep from interfering with someone's tv,
etc. Go tell the
operator about the interference. If it is a ham, he will probably tell
you to try a high-pass
filter at the tv. They are cheap. Also, since you are not on cable,
most anything can
interfere with your tv. If y'all can't clean up the interference, tell
him when you would
like him/her NOT to be operating. Perhaps he will lower his power
during those hours.

Remember, if this operator is operating legally, the FCC generally
considers the ham
operator blameless if he has done everything in his power to stop the
interference. If
all else fails, get the name and address and callsign of the operator
and write the FCC
field office nearest you. The ham operator will receive a letter from
the fcc asking
him about the situation. They may or may not do anything to him
depending upon how
cooperative he is.

If your neighbor is a CB operator, you are probably screwed...or, if the
operator is one of

the older farts operating on 80 or 40 meters, you may be screwed as well. These guys
generally operate at legal limit, same kind of "one up-manship" that pervades the CB operators. I live in a townhouse, and I DON'T operate when a BAMA football game is
on, or a NASCAR race, or some other big deal, because i sure wouldn't want someone
stepping all over my Jerry Springer, or whatever. Fortunately, we all have cable, and
i can generally run 100 watts without messing anyone up (except phones....)

Good luck,,,Mark

Yes, but is that taking into account $100,000 for an antenna or renting tower space, buying a transmitter ($30,000), buying a control board, cart machines, microphones, cables, soldering equipment, blank tapes, renting satellite equipment, Marti STLs, transmitter monitoring equipment, modulation monitors, headphones, log books, staff salaries, etc.?

Seems to me there is a lot more to a radio station than "$432 a month."

3897. Pacemaker & Radio

Well.
There are two sides of this case. It simply depend
if the equipment he is using generates signals
on undesired frequences, eg on TV frequences.

If it is the case you can force him to do some
modifications to his equipment, reduce power,
mount some filters which can filter out unwelcome
frequences.

On the other hand if he does all correct then it is
your TV/VCR or antenna which need to be fixed, and
it is not his problem,

Either way, get a contact with him and try
to solve it out togather. In some countries
there are autorities which can measure the radiated
spectrum and its intensity. Check if you have got
someting like that in your country.

Best regards from a ham radio amateur

Have you checked the ground continuity, with the coax disconnected from the antenna base, to the negative side of the battery? Same with the Radio ground. You may have good continuity to metal, but is it the same potential as the electrical ground? Also, any chance the shield got broken somewhere inside the length of coax?

If you have jumper cables, may want to connect one side to the neg. batt. cable and work your way back towards the trunk connecting to different metal structures to see if you can complete the bond. Since it worked well with the mag mount, which didn't have a direct ground connection at the antenna, sounds like the ground at the trunk is not the same as at the radio or battery. You didn't mention if the mag mount was used in the same spot as the trunk mount.

Nice thought, but keep dreaming. There's no constitutional
clause regarding radio usage -- the (former) Communications
Act is more like a "sunshine" law that requires public meetings
to be open.

Nope, we'll have to wait until Congress starts discussing
campaign finance reform before anything could possibly happen.
I don't expect to live to see it.

3902. Finding a connector F that can be buried underground

Newsgroup: rec.radio.amateur.misc
Date: 1998-03-13 00:00:00 UTC
From: gauger@dsuper.net
Message-ID: <3509aaf4.110913075@news.dsuper.net>
Source record: 175896

I have electrical equipment molded in a epoxy bloc with 3 F female
connectors for connecting to it.
This equipment must be burried underground and for a long time.
My prime concern here is to find a good way to wathereproofing theses
3 connections.
First of all, do you know the existence of a RG-6 F connector that is
"underground approuve" I have find F connectors that are watherproof
but not "undergroundproof."
There is problably other ways to watherproof these connections, what
can I expect from those compounds labelled Liquid Electrical Tape, or
what is the effectiveness of those heat shring cable specially made
for watheproofing connectors.
If you can help me to find a solution, leave me a mail.
Excuse my English and thanks for your collaboration.

Probably a good guess at the GWEN messages :-)

Actually, one of the best LowFER signals in the country is Bill Bowers'
"OK" beacon from Davenport, OK on 189.95 kHz. It may not be on all the
time, but is your best bet at capturing a LowFER signal. Usually
readable here in Minnesota on those rare nights when QRN isn't
excessive.

No, Jeff, I was not in the commercial nor I have seen it.

I really do not care what most other people talk about (unless
it is a political enemy, then I want to know everything. But
then that is what good Intel is all about). I guess I get mad
at someone telling what I can not do, especially when it is
really bad law.

Jeff, I grew up in small town America. There is no such thing as
privacy except what you create (and that is usually an illusion).
To say that a broadcasted radio wave is private is crazy! What do
a bunch of lawyers know about technology?

Look, Jeff, if I remember right, you a radioman in the Coast Guard.
So you know about radio waves and you also know about how hard it is
to get things private, especially in small, tight groups of people.
It really counts on you being a person of character. The clowns who
tried to run the edges of the rules, usually found out that everyone
knew what they were up to. It is the same everywhere, even in the
big cities. You can run but you can't hide. Either you have character
and does not matter or bullshit and everyone knows. Either way,

privacy is an illusion that your friends create for you.

Mike:
I too have an ICOM 745 and it has been a great radio. You can barely get by with a 20A supply for SSB but for FSK or FM it will overload it. At full power output mine pulls about 21A. When a power supply is rated for 20A, that is an ICAS rating which is another way to say the absolute maximum rating.
I would highly recommend the Astron RS-35 as being the most suitable power supply for your radio. There isn't that much difference in price as I recall and the reserve capacity is worth every penny of the difference.

You get what you pay for. ITC makes a reasonably priced analyzer which is suitable for most amateur applications. B & B Electronics in San Diego was their distributor if they still are in business.
You may look around at swapfests etc. I once saw a Tektronix 494 selling for about $500. I would have bought it if I had the funds at that time.

Listening to radio is the same as looking in other people's windows? Are you nuts? Since radio began we've had the right to listen to anything as long as we did not repeat it. It is time to go back to that. This doesn't get the Democratic scum of the hook, however, since they recorded and leaked a cell phone call to the media. This was illegal all along.

Hi Dick - I just bought one of these radios at the unbeliveable
close-out price of $69.95. There is no built-in mic (it's not
an HT). But my question is, how does one decrease the low-power
(10W) setting? That's way too much for my needs (10th floor
apartment within view of the Diamond Head rptr). I've scanned
the schematic looking for a variable pot near the final stage
that would adjust say, the B+ going to the final, but nothing found.
Support@tandy.com was of no help ("Users are not allowed to make
any modifications to FCC certified equipment" or words to those effect).

Say Ed, are you sure you're wired according to NEC standards?
When I went before the FCC examiner in San Francisco back in
'76, it was nothing as you described.

Better check your wiring, OM.

If he is a cber running more than 5 watts he is in violation of FCC
regs and can be closed down, his equipment seized and even fined
thousands of dollars if he continues!!

If the station is emitting spurious signals in the television band
exceeding a certain threshold value, then it is operating illegally.
This would be unusual for transmitting equipment of modern
design, but it is possible, especially if the operator has misadjusted
his equipment. If this is the case, the operator of the transmitting
station is required to take steps to bring his equipment into
compliance with good engineering practice. Most radio amateurs
will be eager to do this, some CBers may not, or may not know
how.

It is far more likely, however, that your equipment is acting as an
unintended shortwave receiver. This is a receiver fault and not a
problem with the transmitting station. The FCC has been
petitioned repeatedly to set radio interference susceptability
standards to prevent broadcast receivers and other consumer
items from acting as unintended shortwave receivers, but they
have refused to act in this matter. This is a matter of great
concern to radio amateurs and others who operate transmitting
equipment in neighborhoods where such consumer equipment
may be being used.

It should be obvious that if a telephone, porch light, or the like
is acting as a shortwave receiver, it is not performing properly.
It is not always so obvious when a television or stereo is improperly
acting as a shortwave receiver. But if it is responding to signals
outside the frequency range in which it is supposed to be acting
as a receiver, it *is* acting improperly. Generally this is because
the manufacturer of the recieving equipment opted to save a few
pennies in manufacture by leaving out proper filtering. Over a
production run of several million sets, this can add up to real
money, so the manufacturer has an incentive to not address
this issue.

The first thing you need to do is to contact the operator of the transmitting station so that tests can be performed to determine the cause of the interference. If the cause is due to a transmitter fault, the operator must take steps to correct the fault. In the more likely case that the problem is that your consumer equipment is acting as an unintended shortwave receiver, you must take steps to solve the problem with your receiving equipment.

In either case, the steps required are often simple and inexpensive. Often the addition of a filter will solve the problem. Or changes in the wiring of the receiving installation may solve the problem. But sometimes the problem will be resistant to such simple solutions. This can be frustrating and time consuming, but usually any interference problem *can* be solved by application of good engineering practice. In rare cases, it may be necessary to replace the receiver with one of better design. (Purchase price is not always an indicator of good design.)
